What do we need to change?

Methodology

From Waterfall to Agile

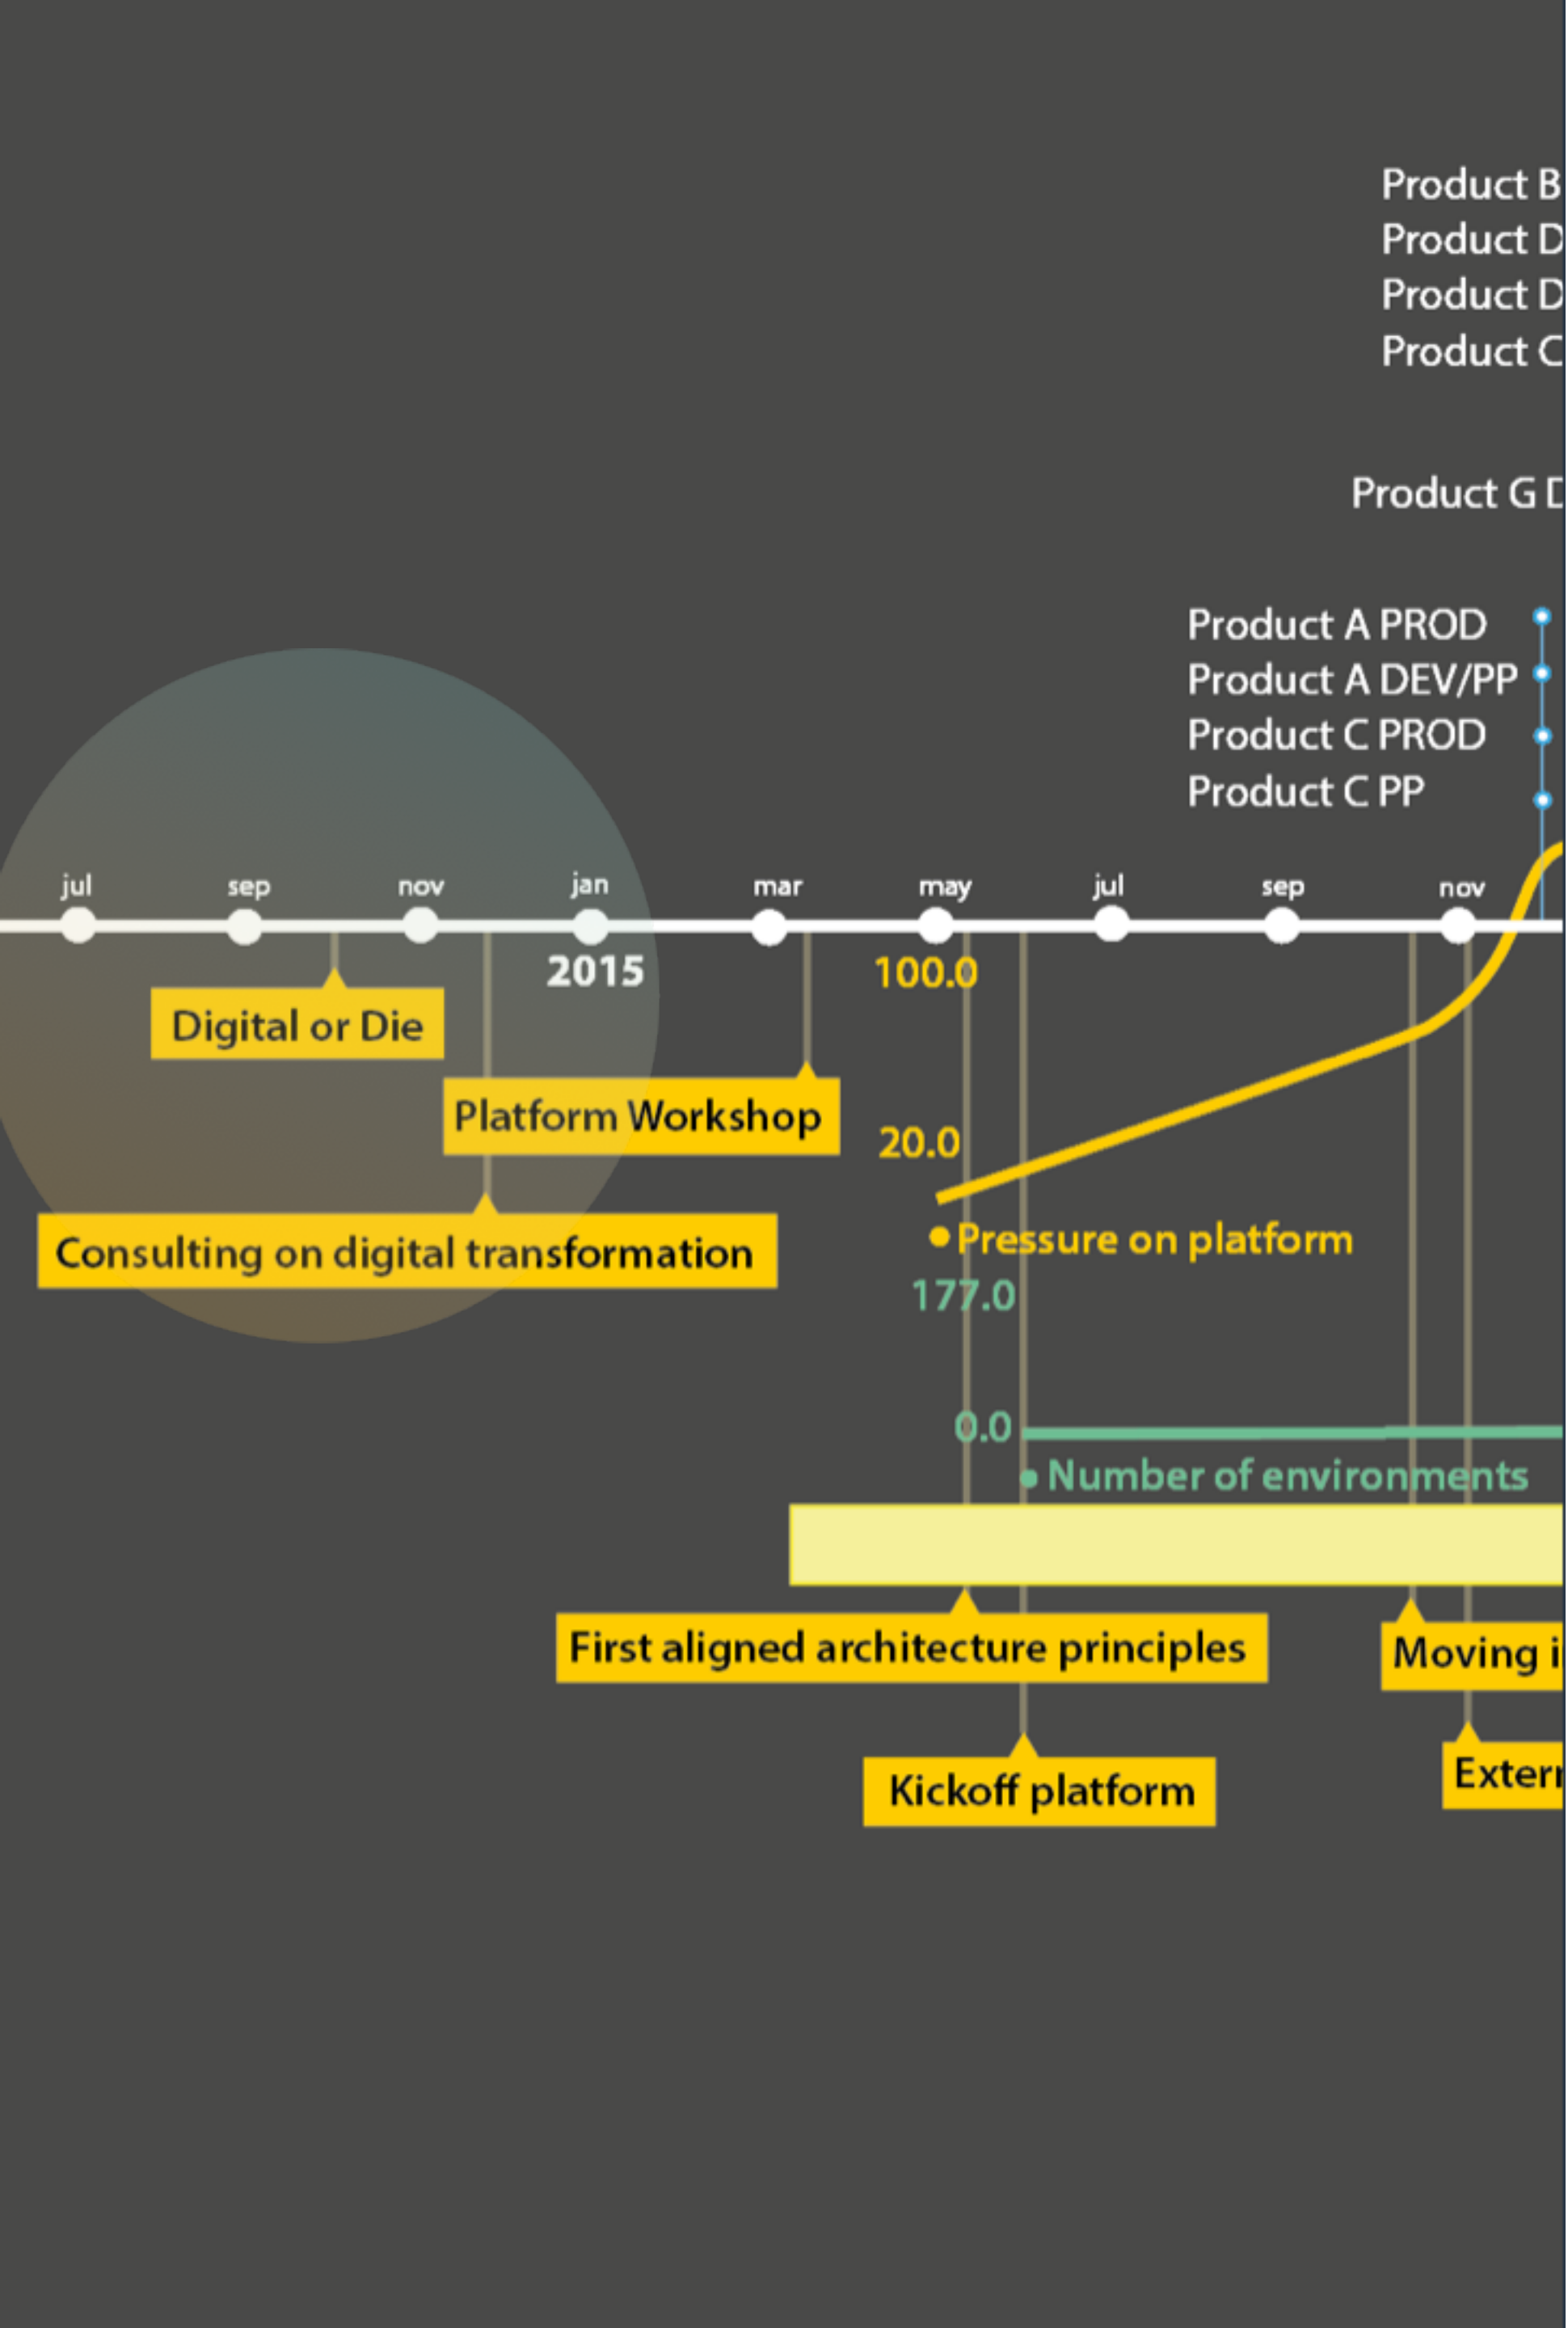

What do we need to change?

Architecture

From Monolith to Microservices

What do we need to change?

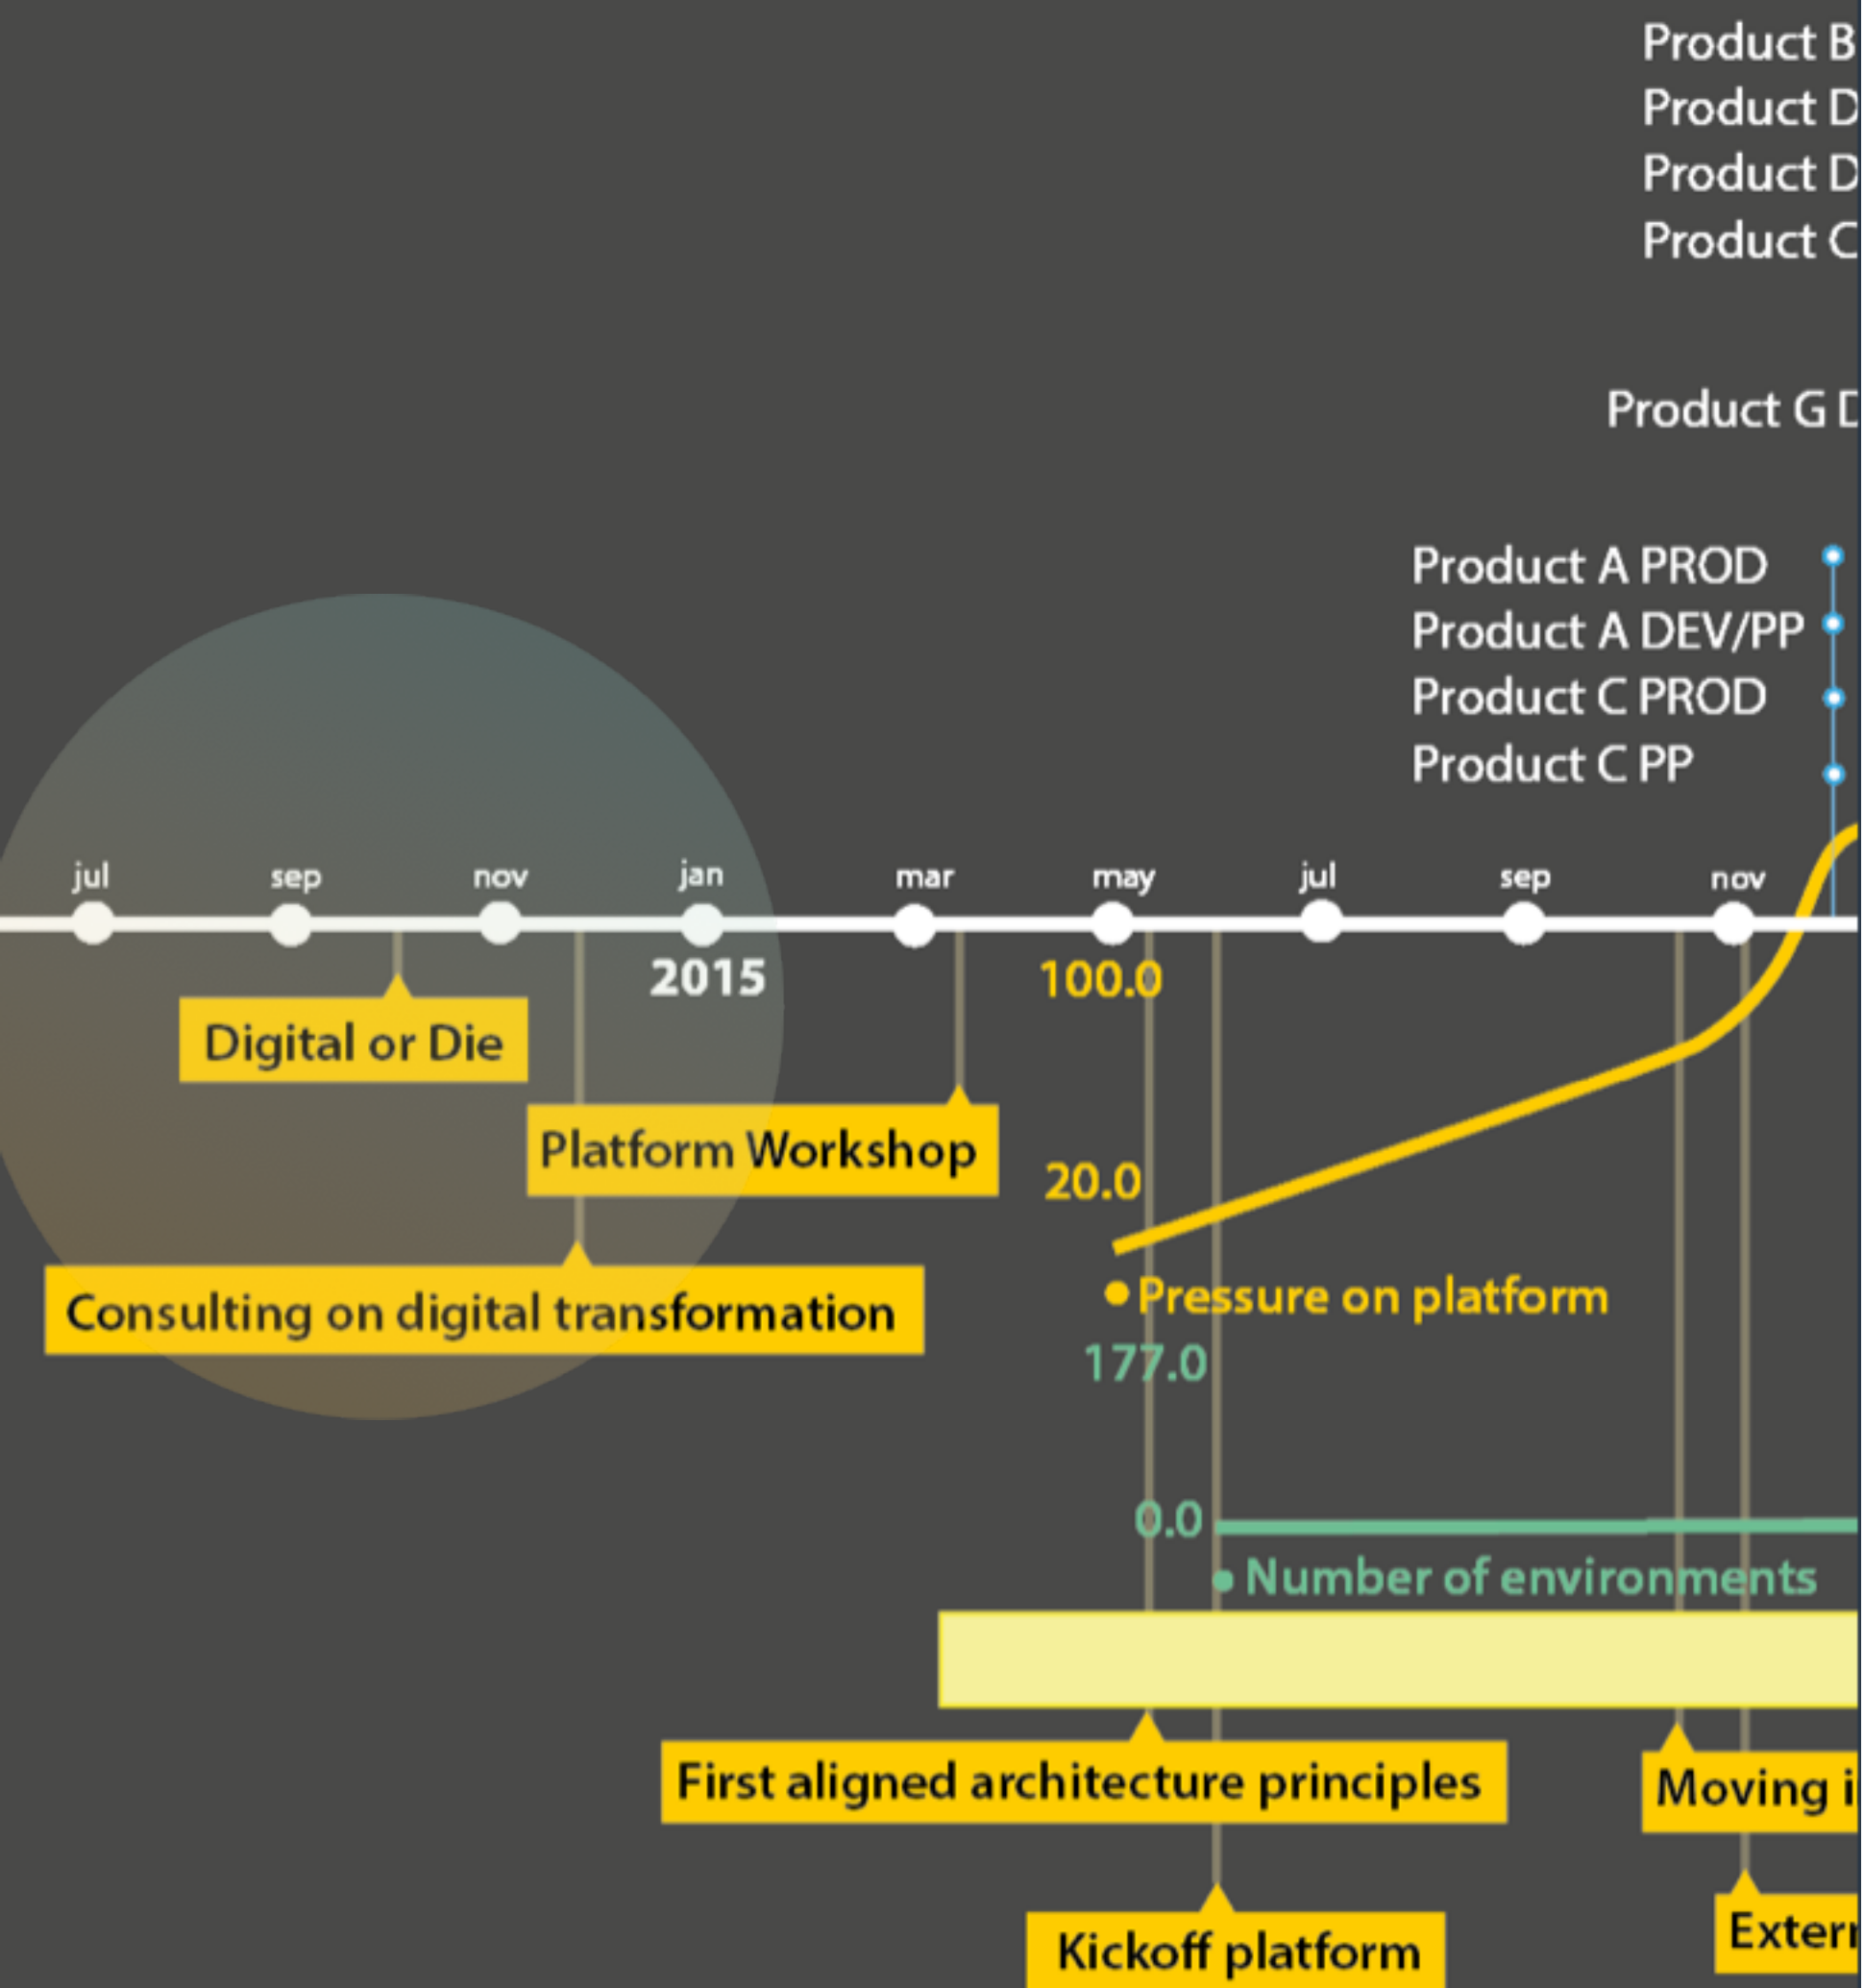

Infrastructure

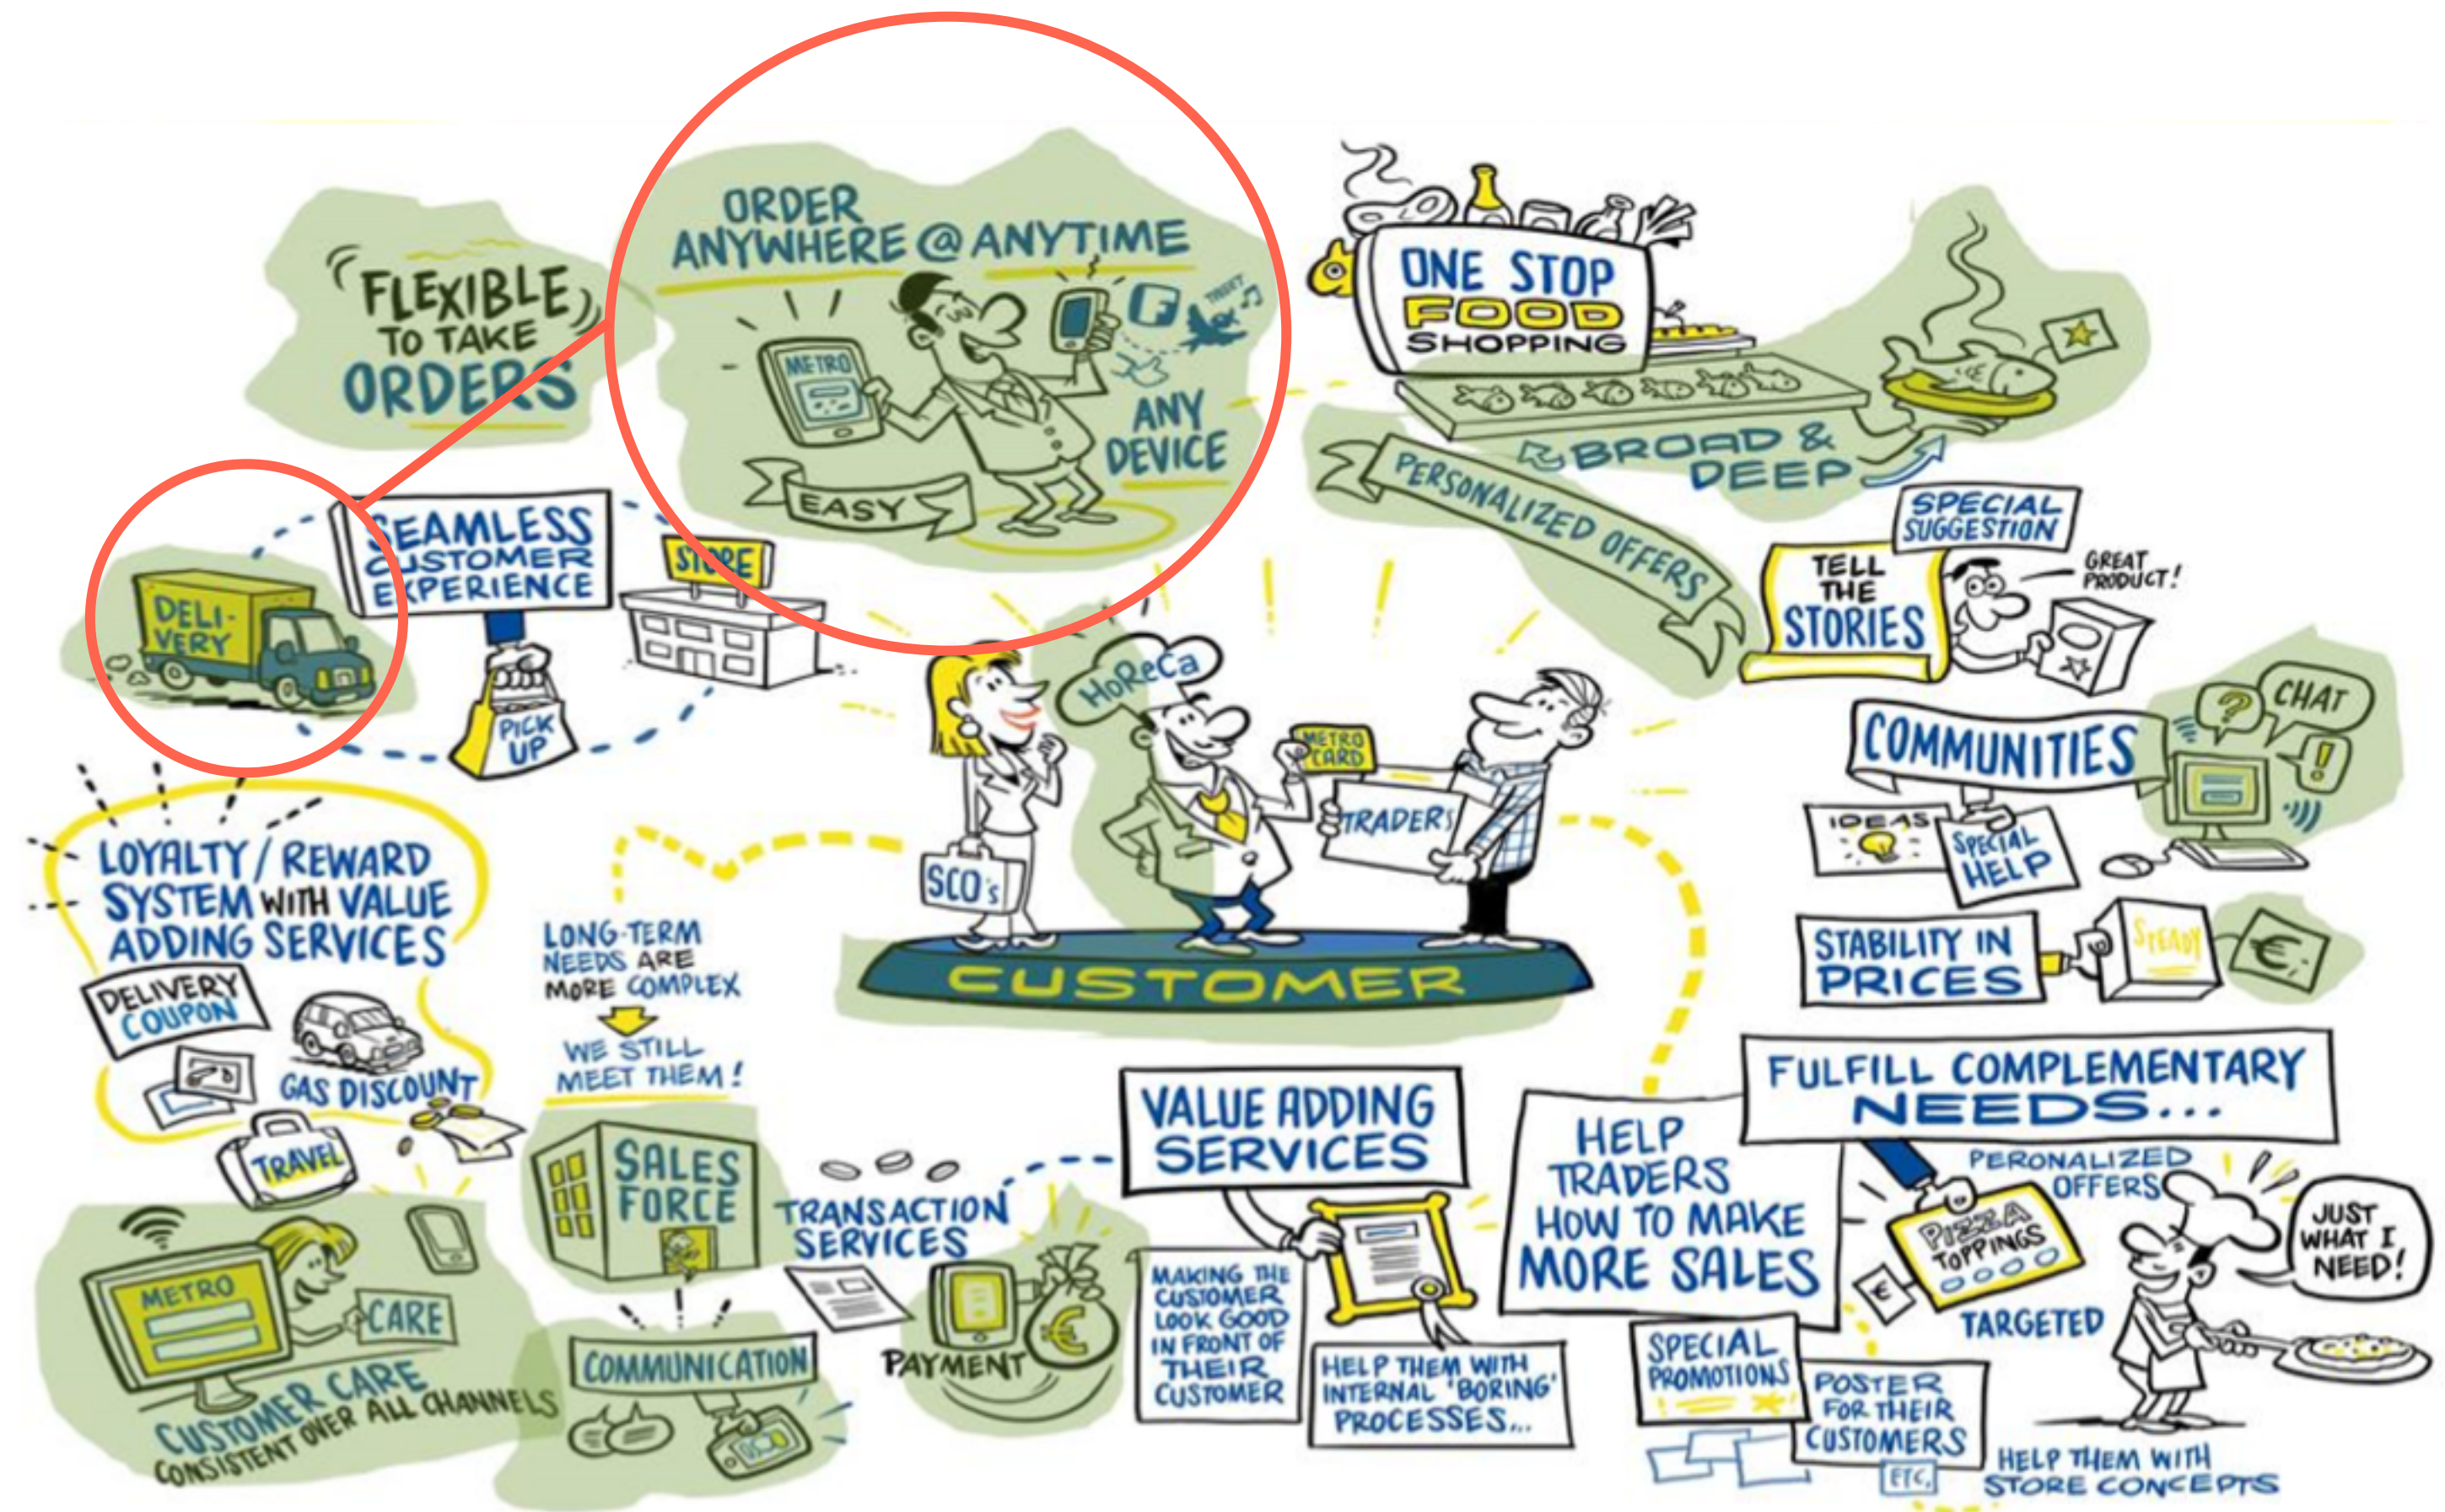

From On-premise to Cloud hosting

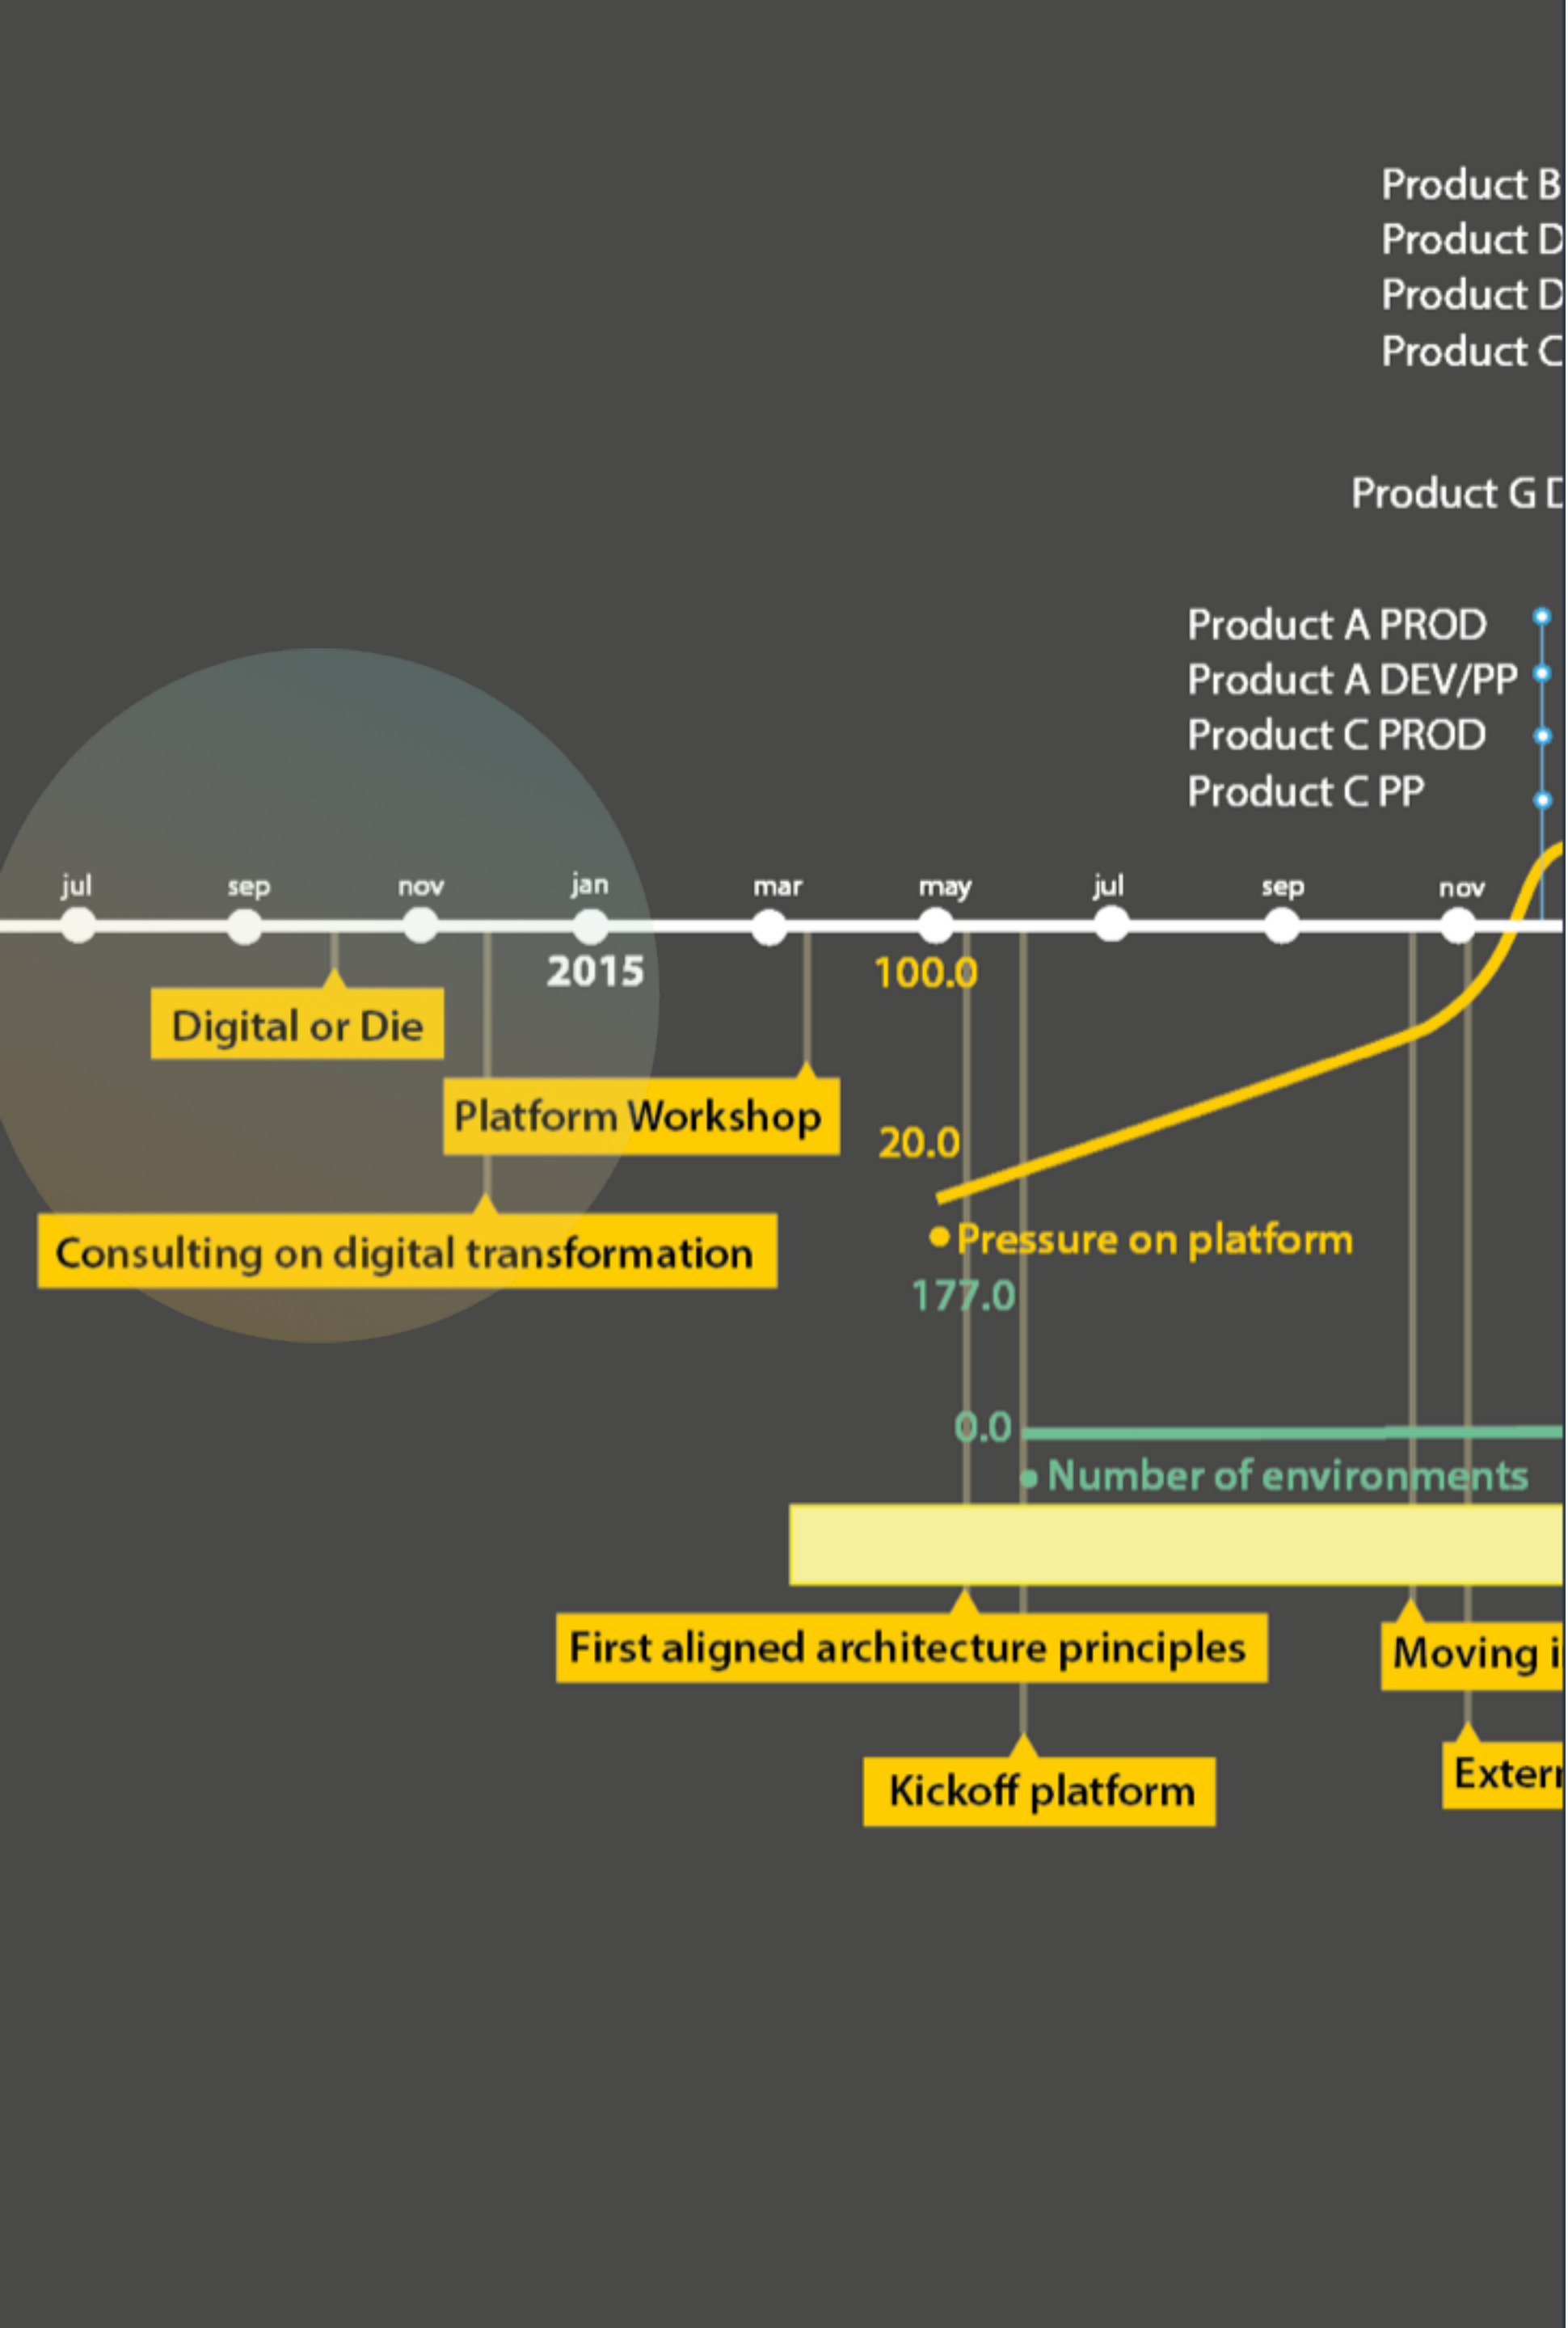

Small effective teams

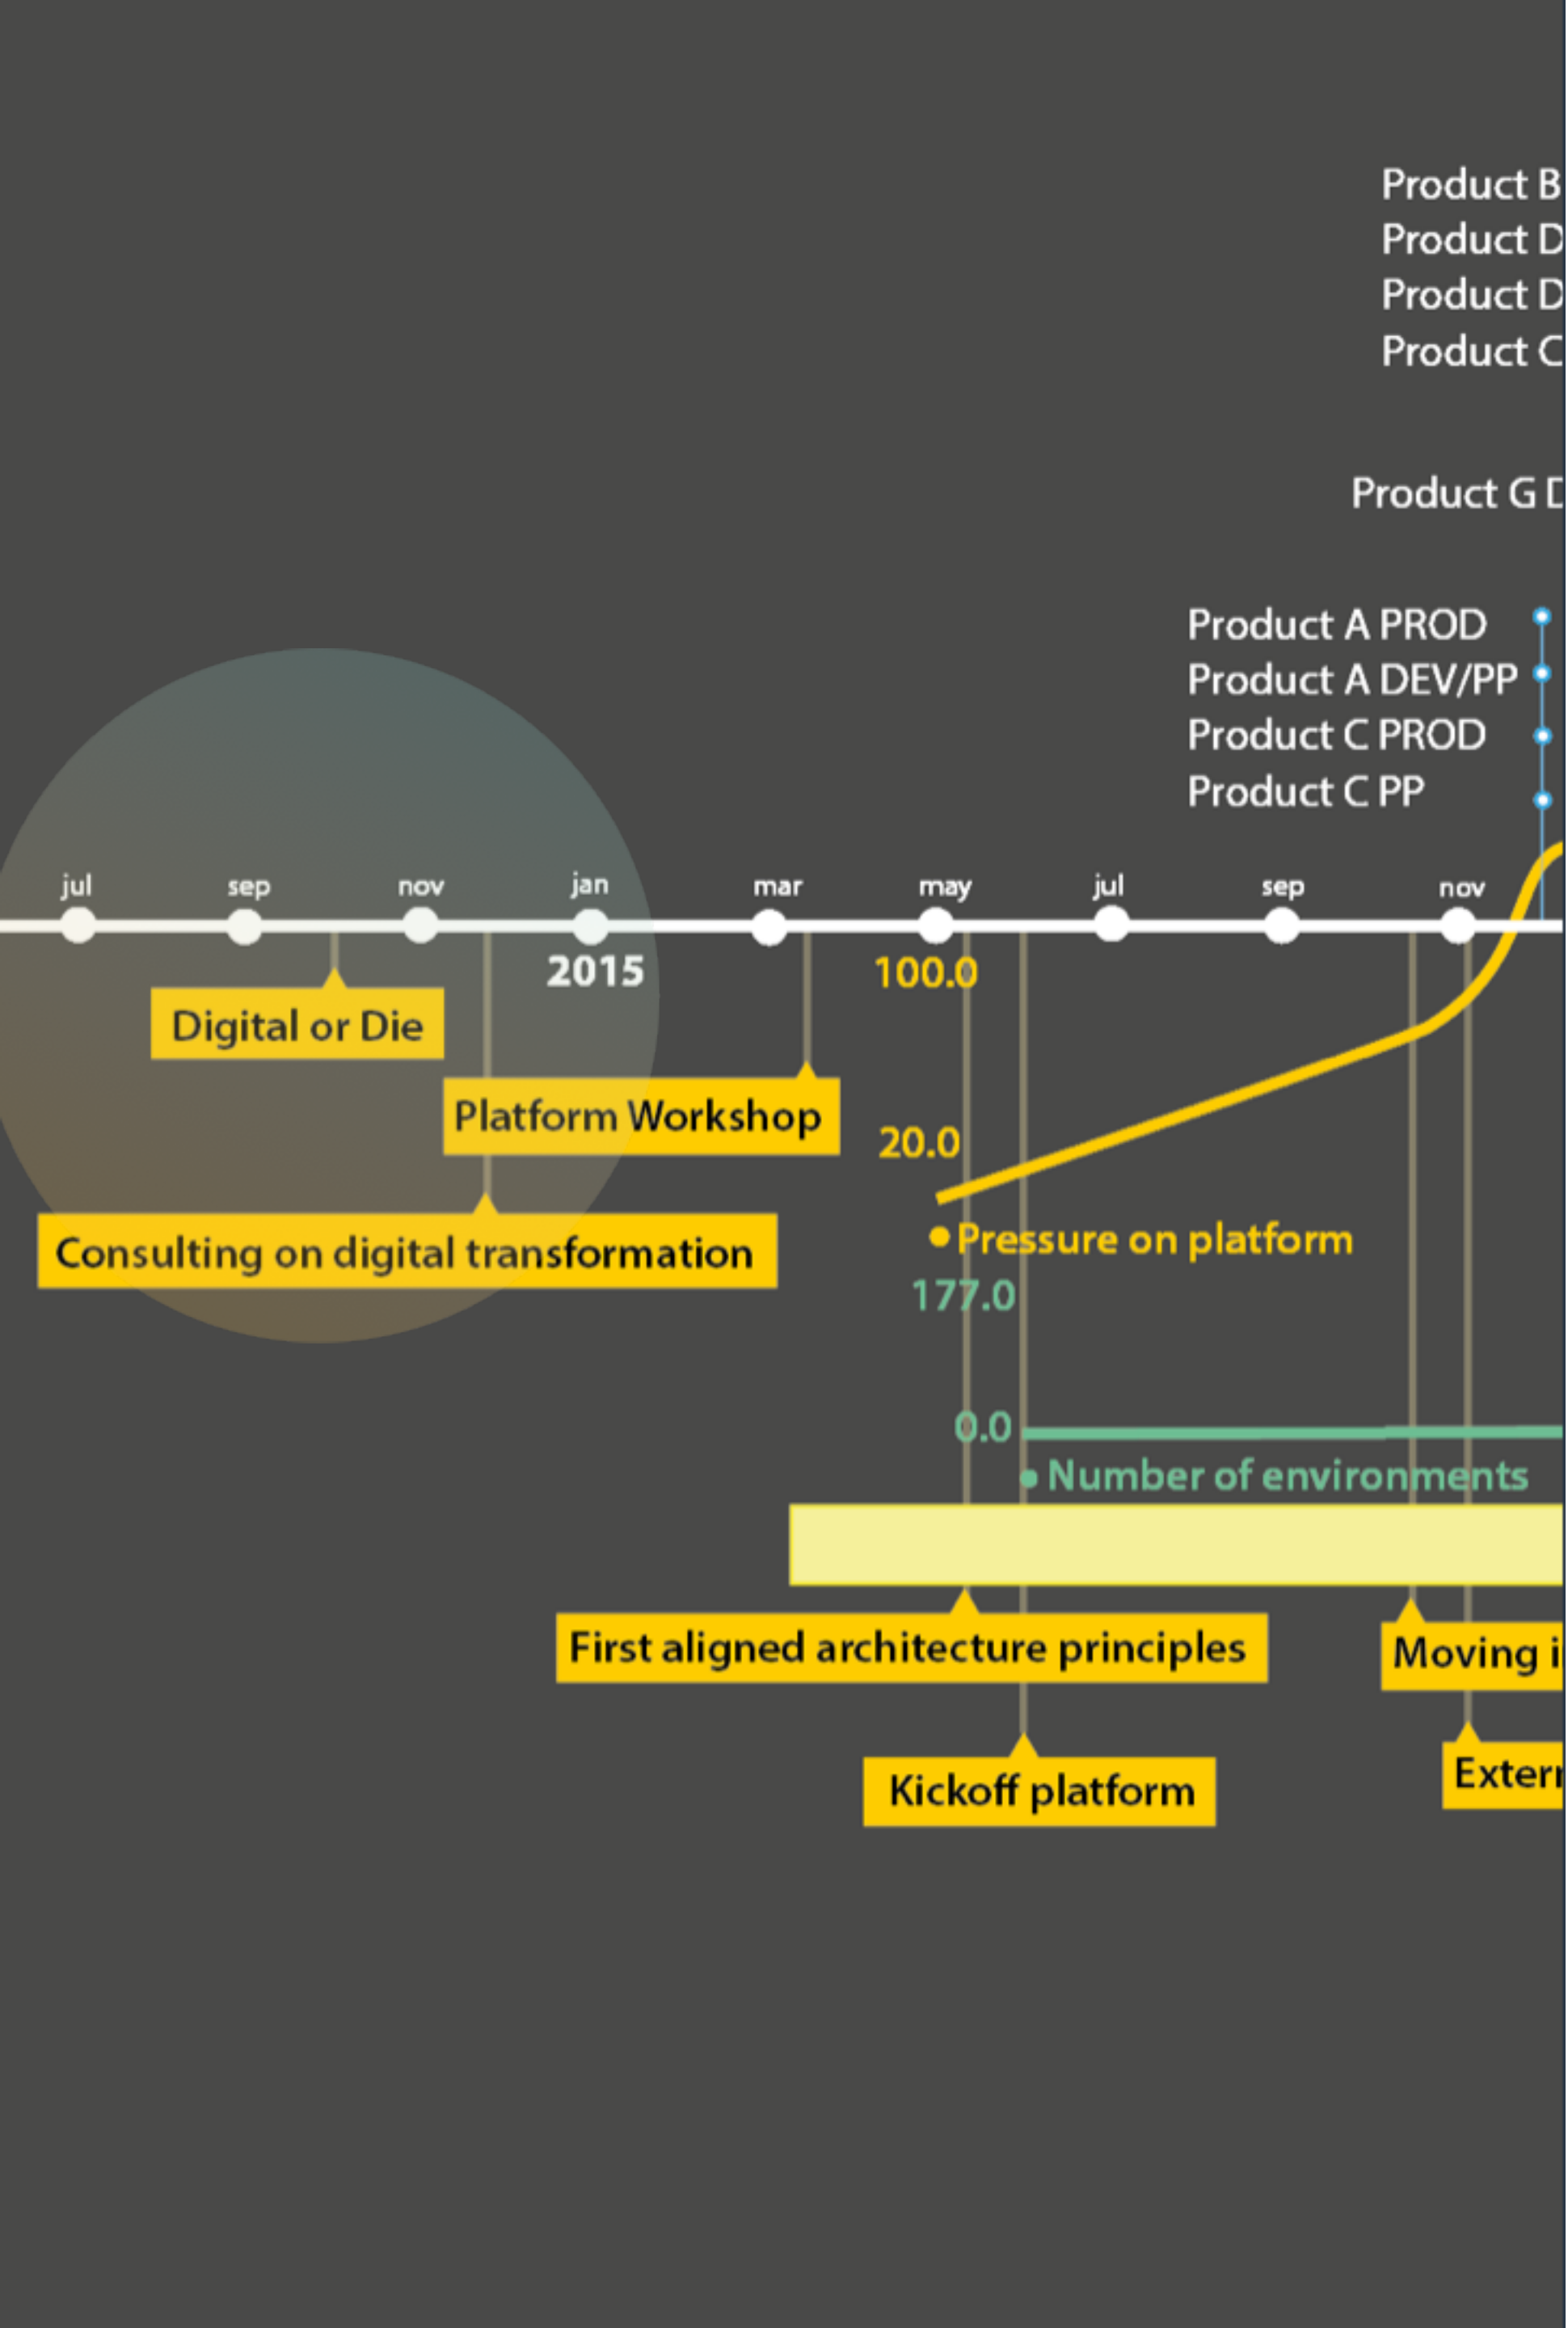

Integrate products

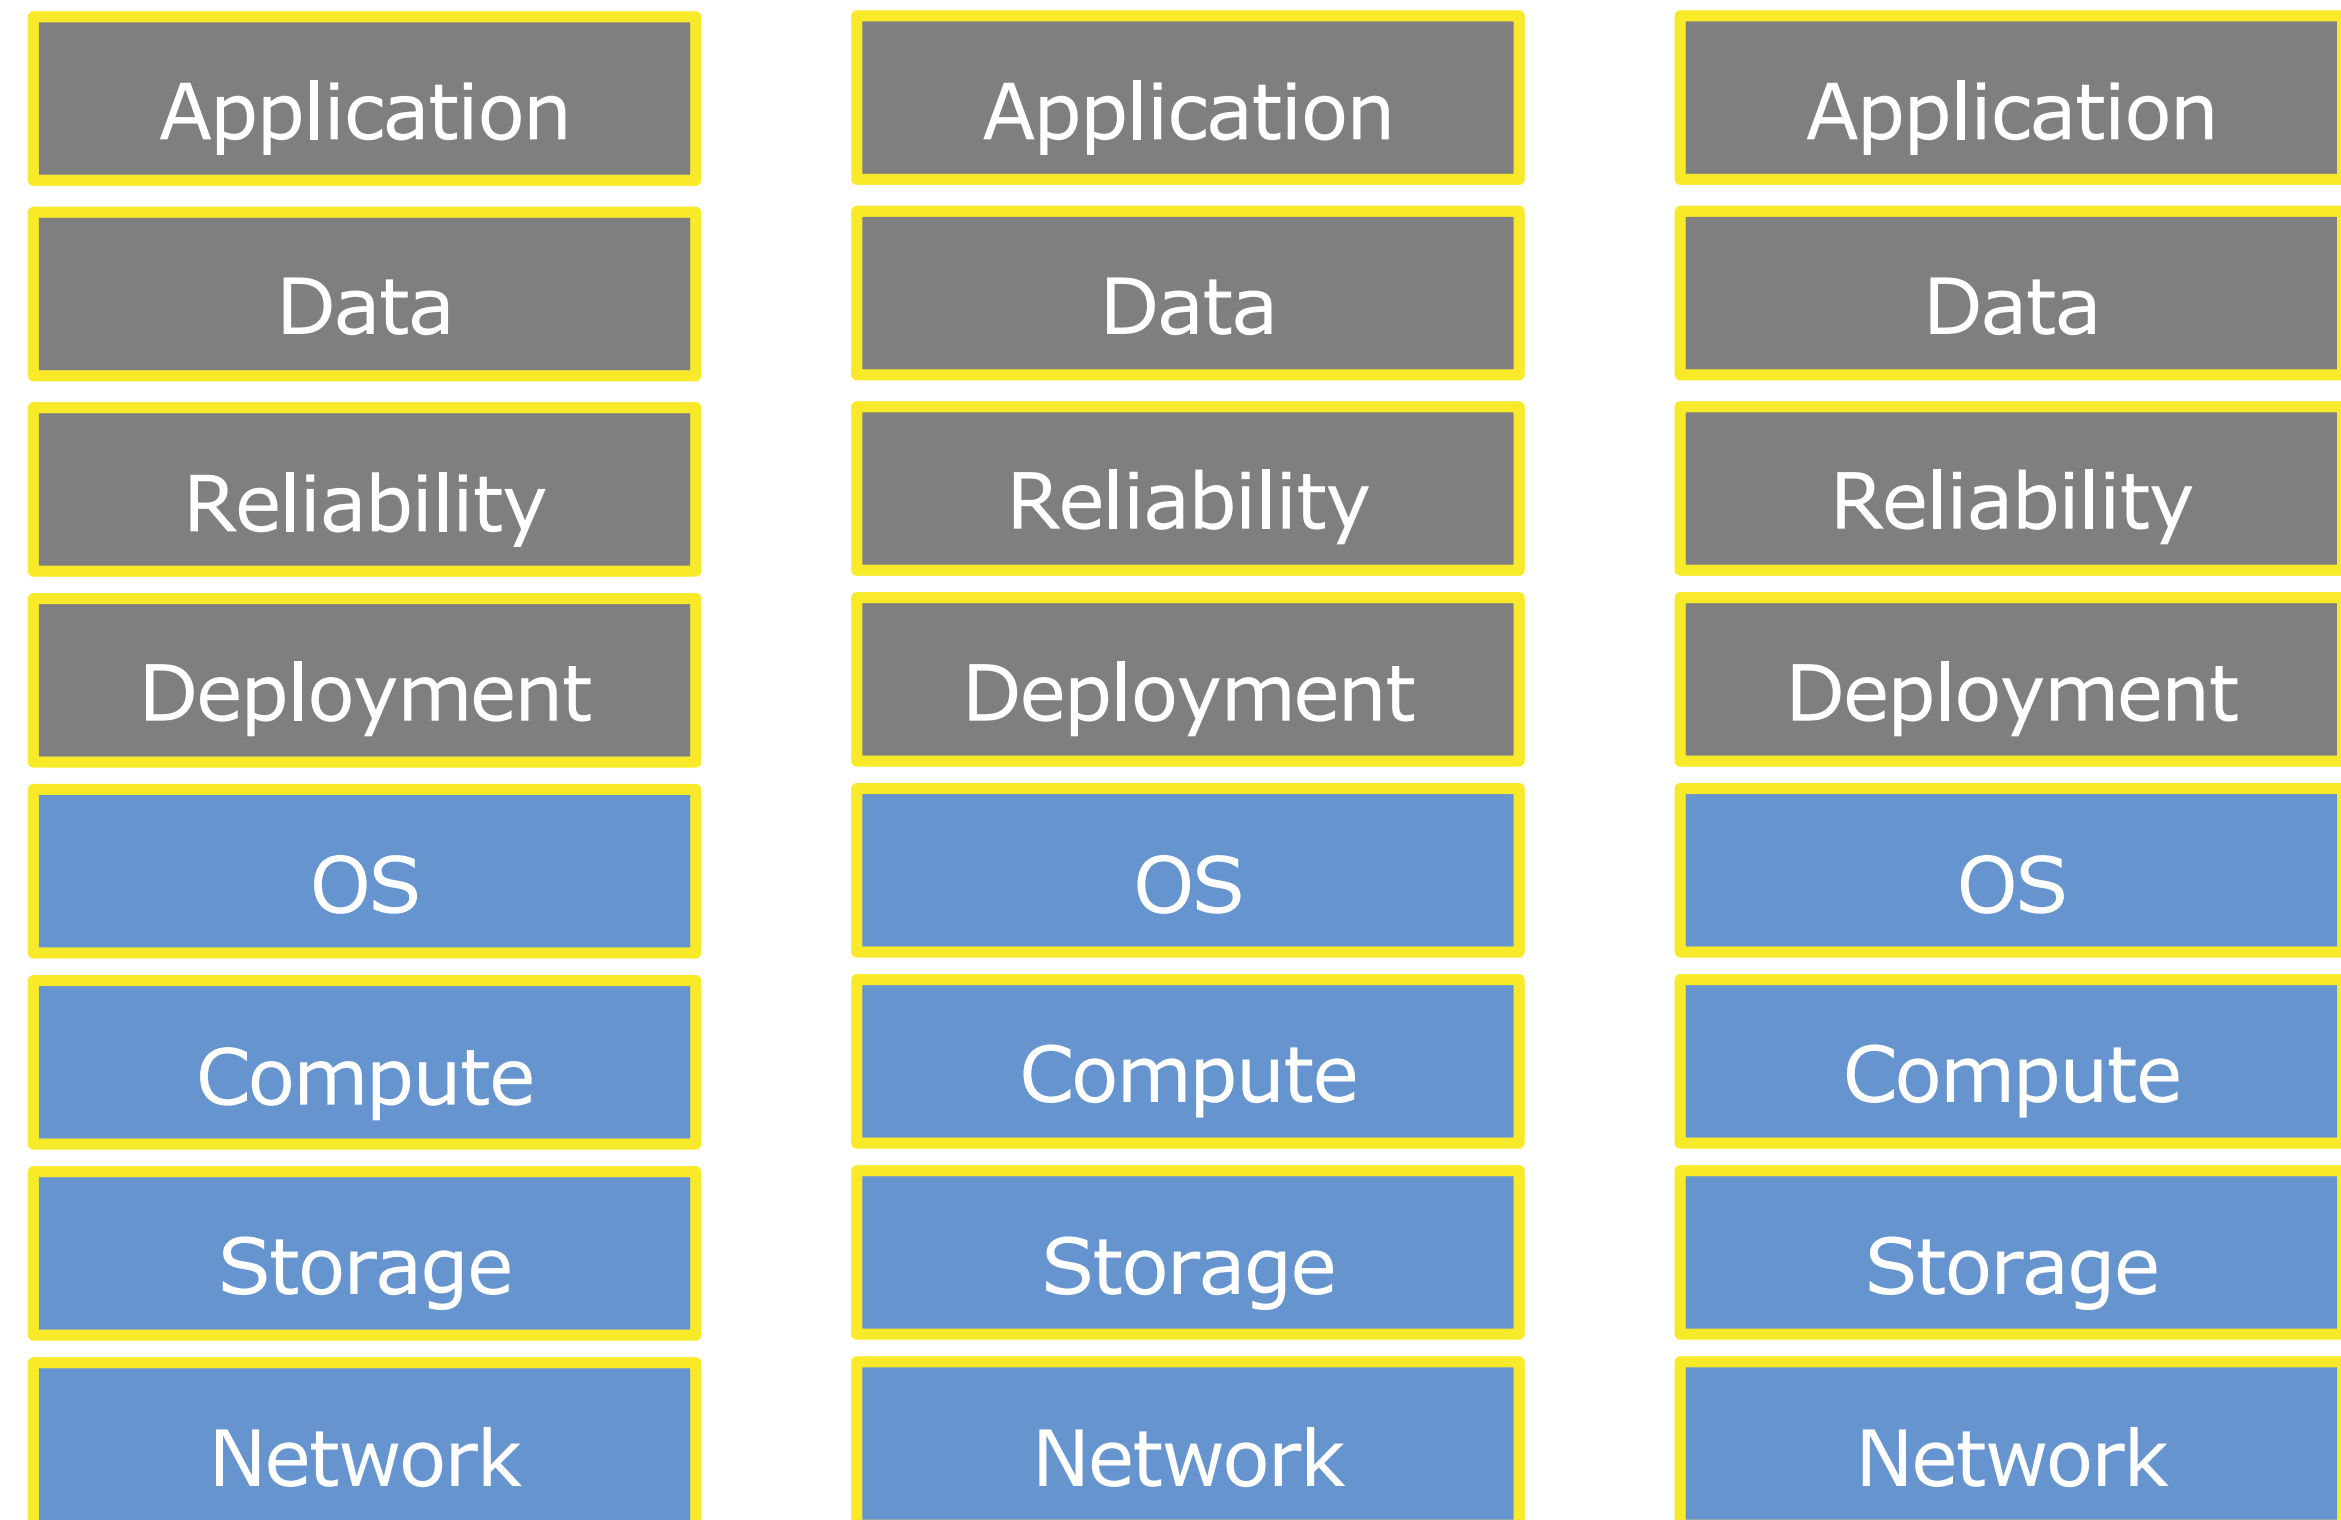

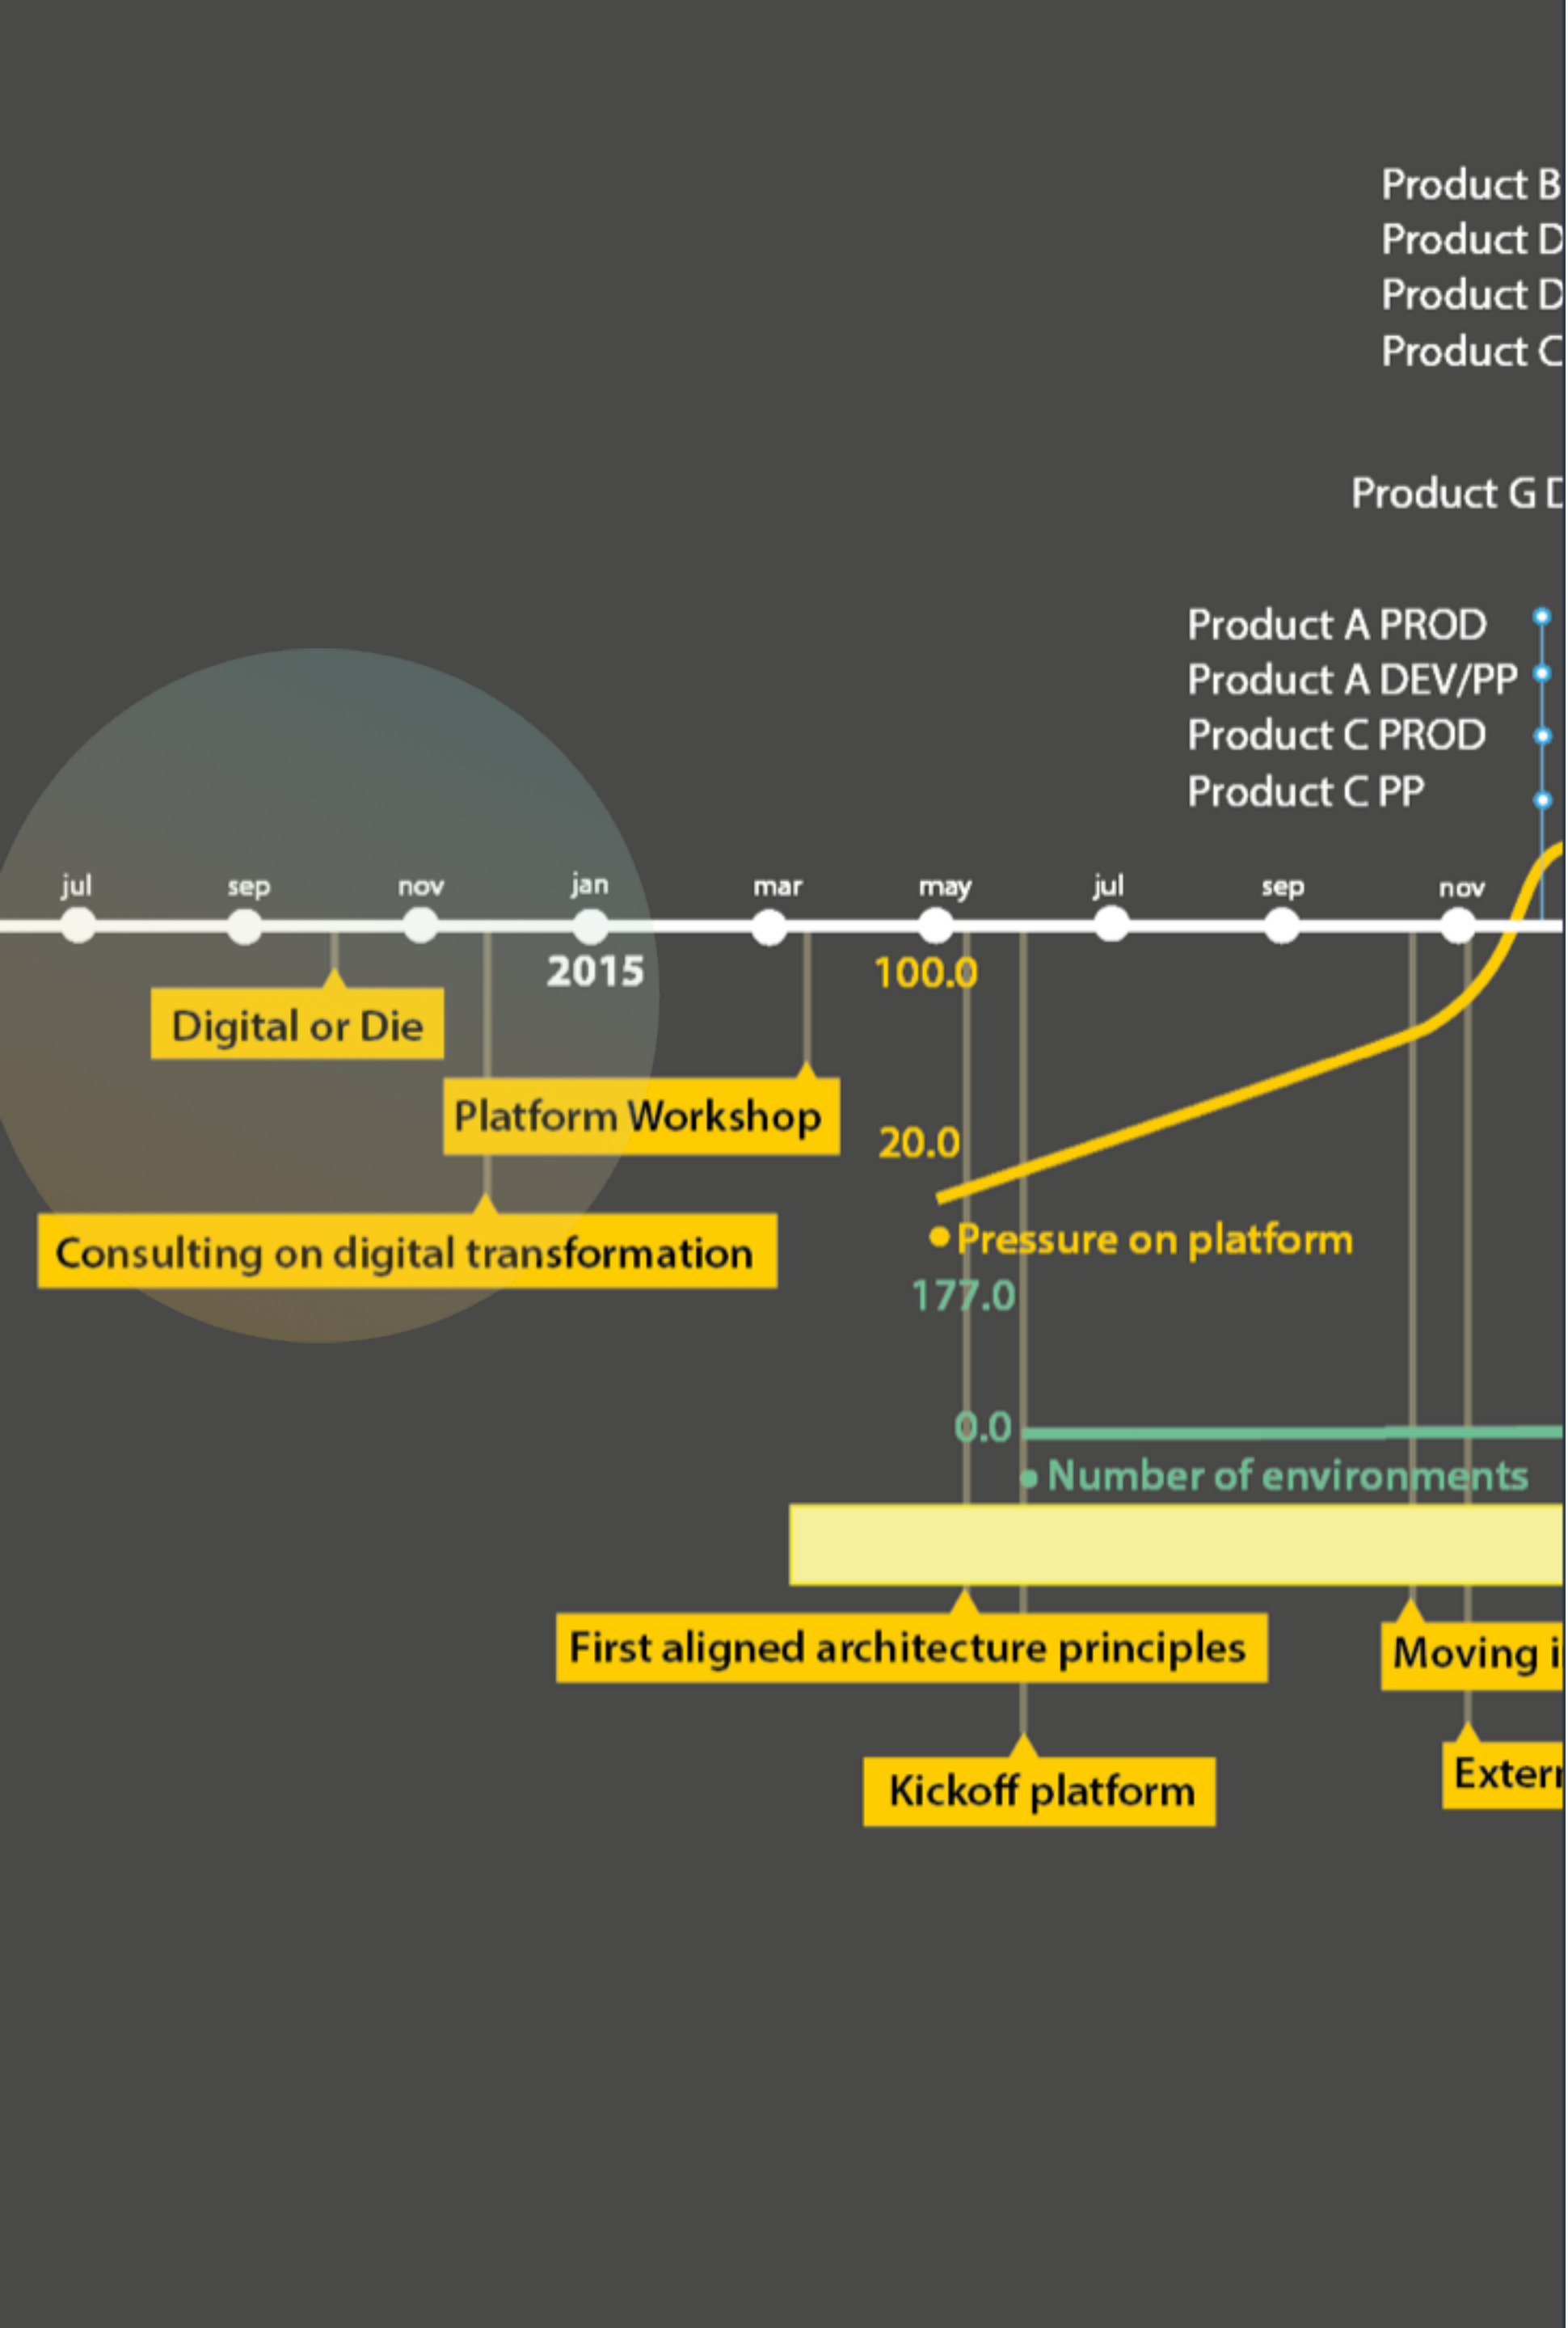

Verticalized, autonomous teams and self-contained systems

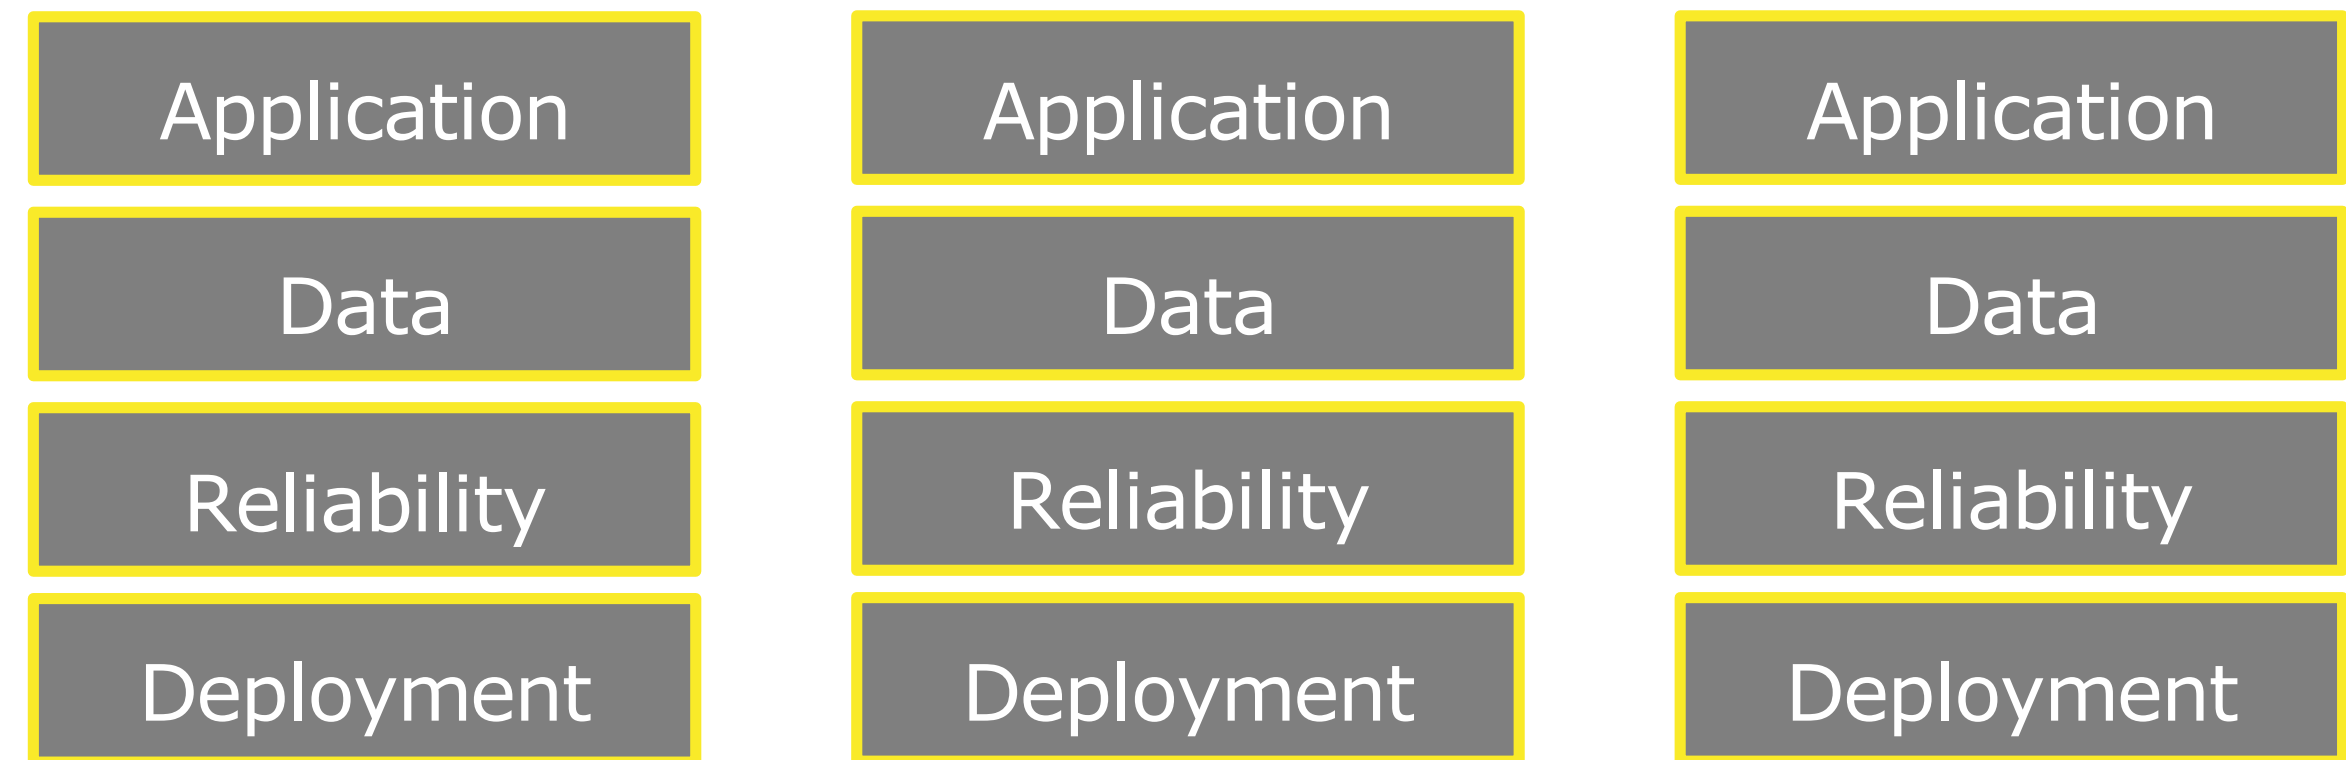

„You build it, you run it.“

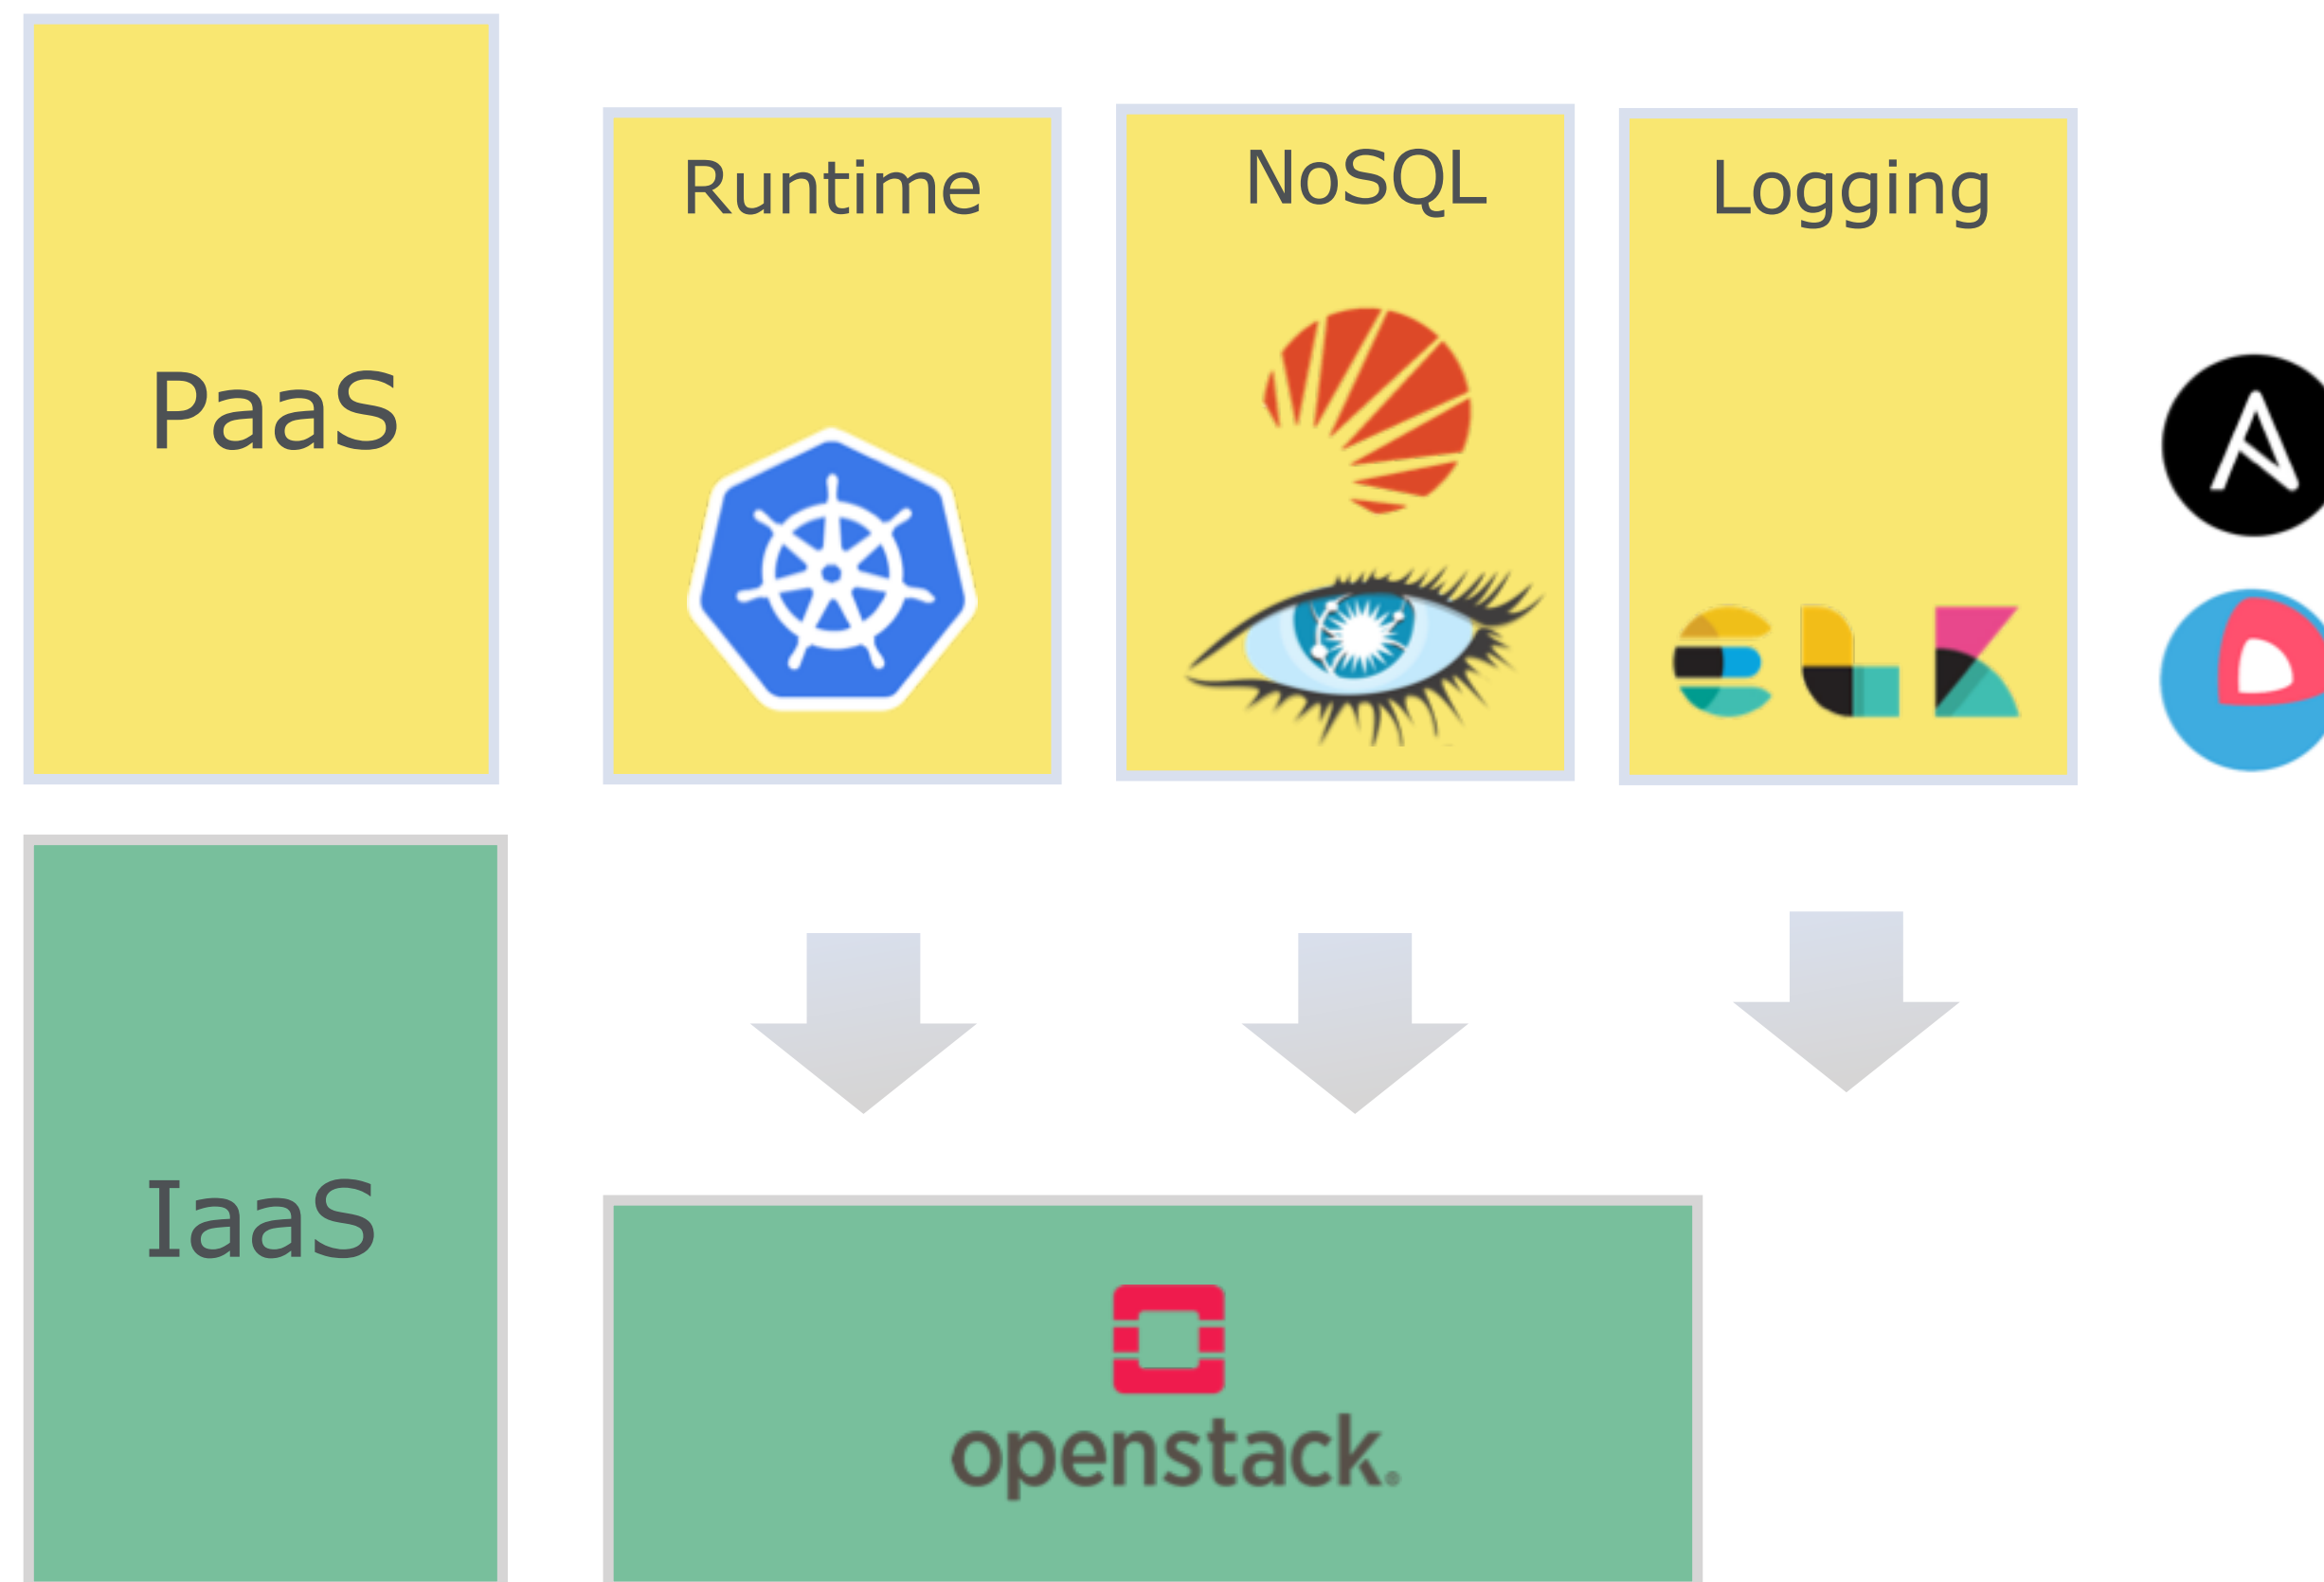

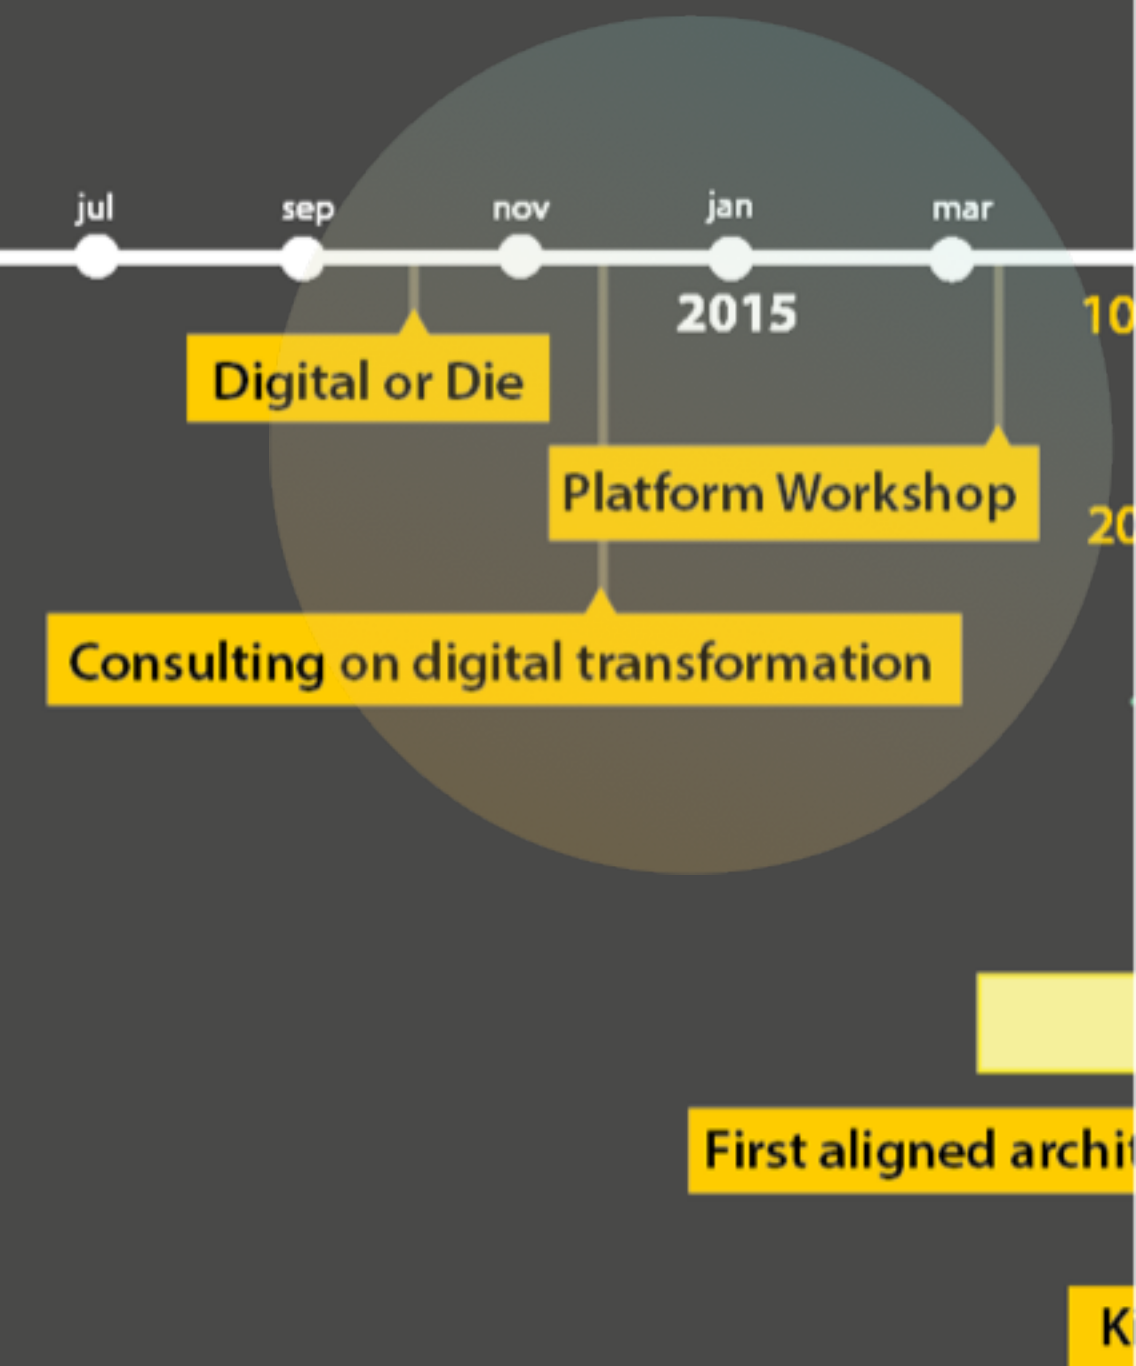

„You build it, you run it.“

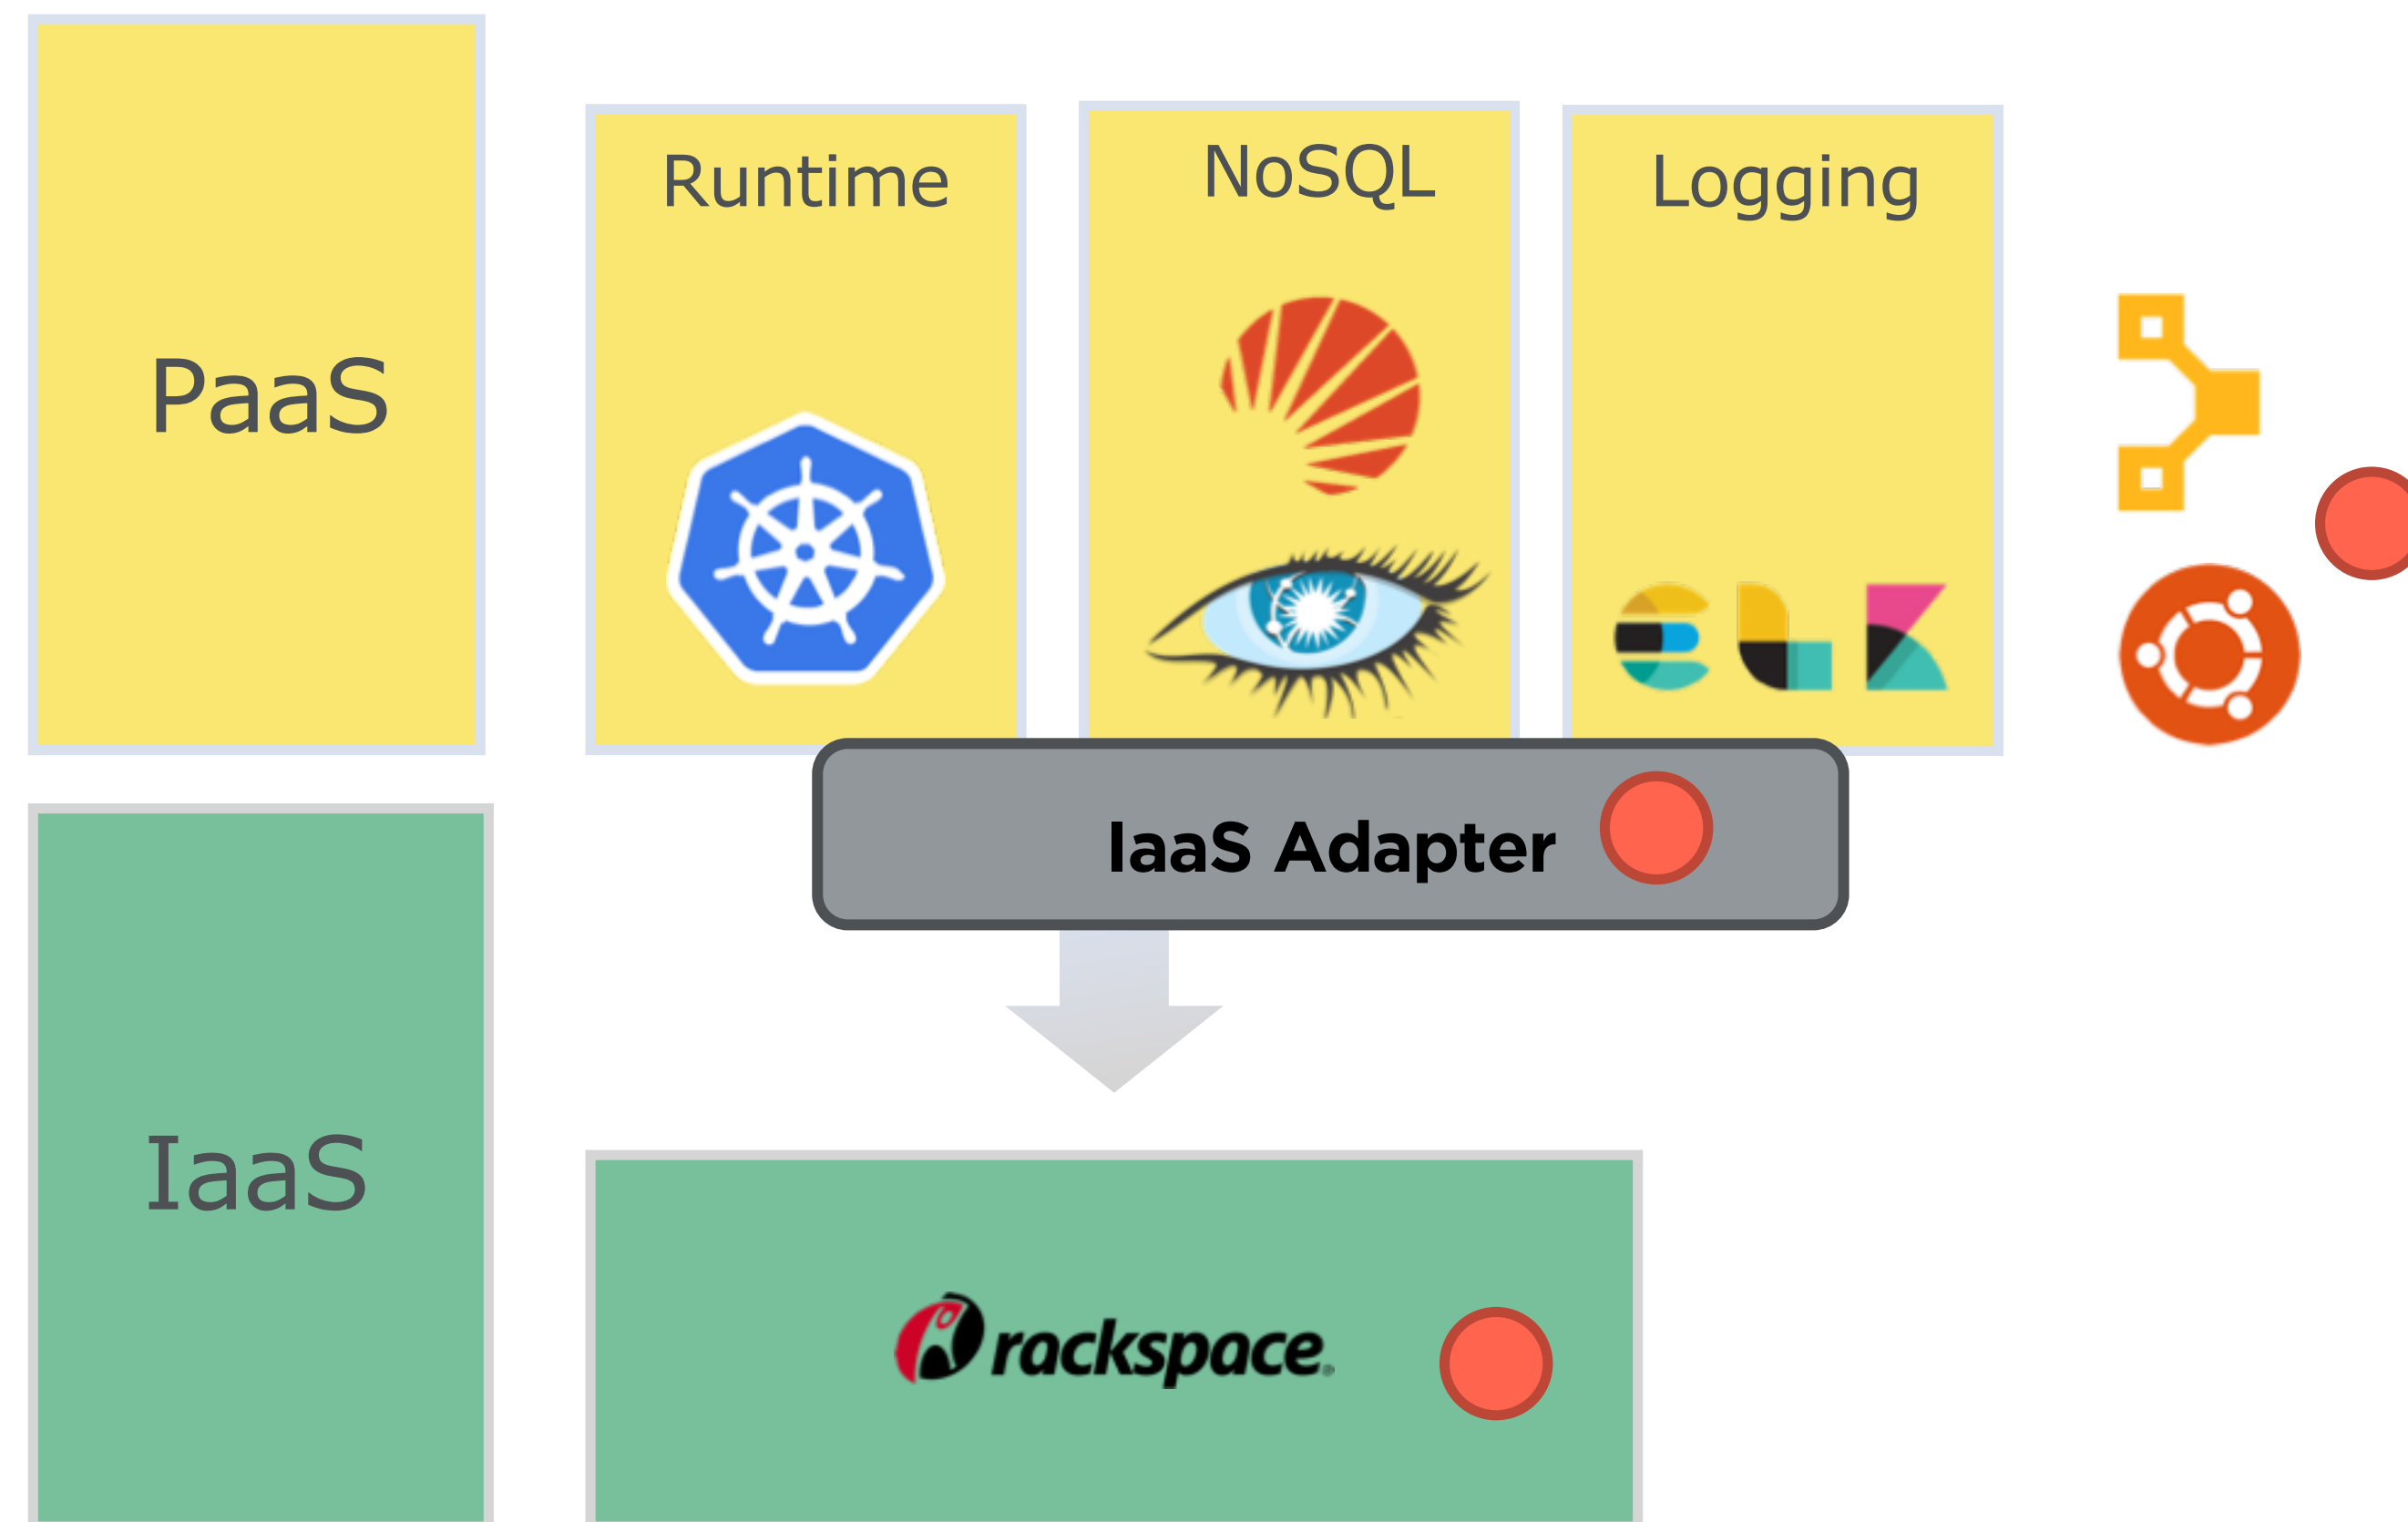

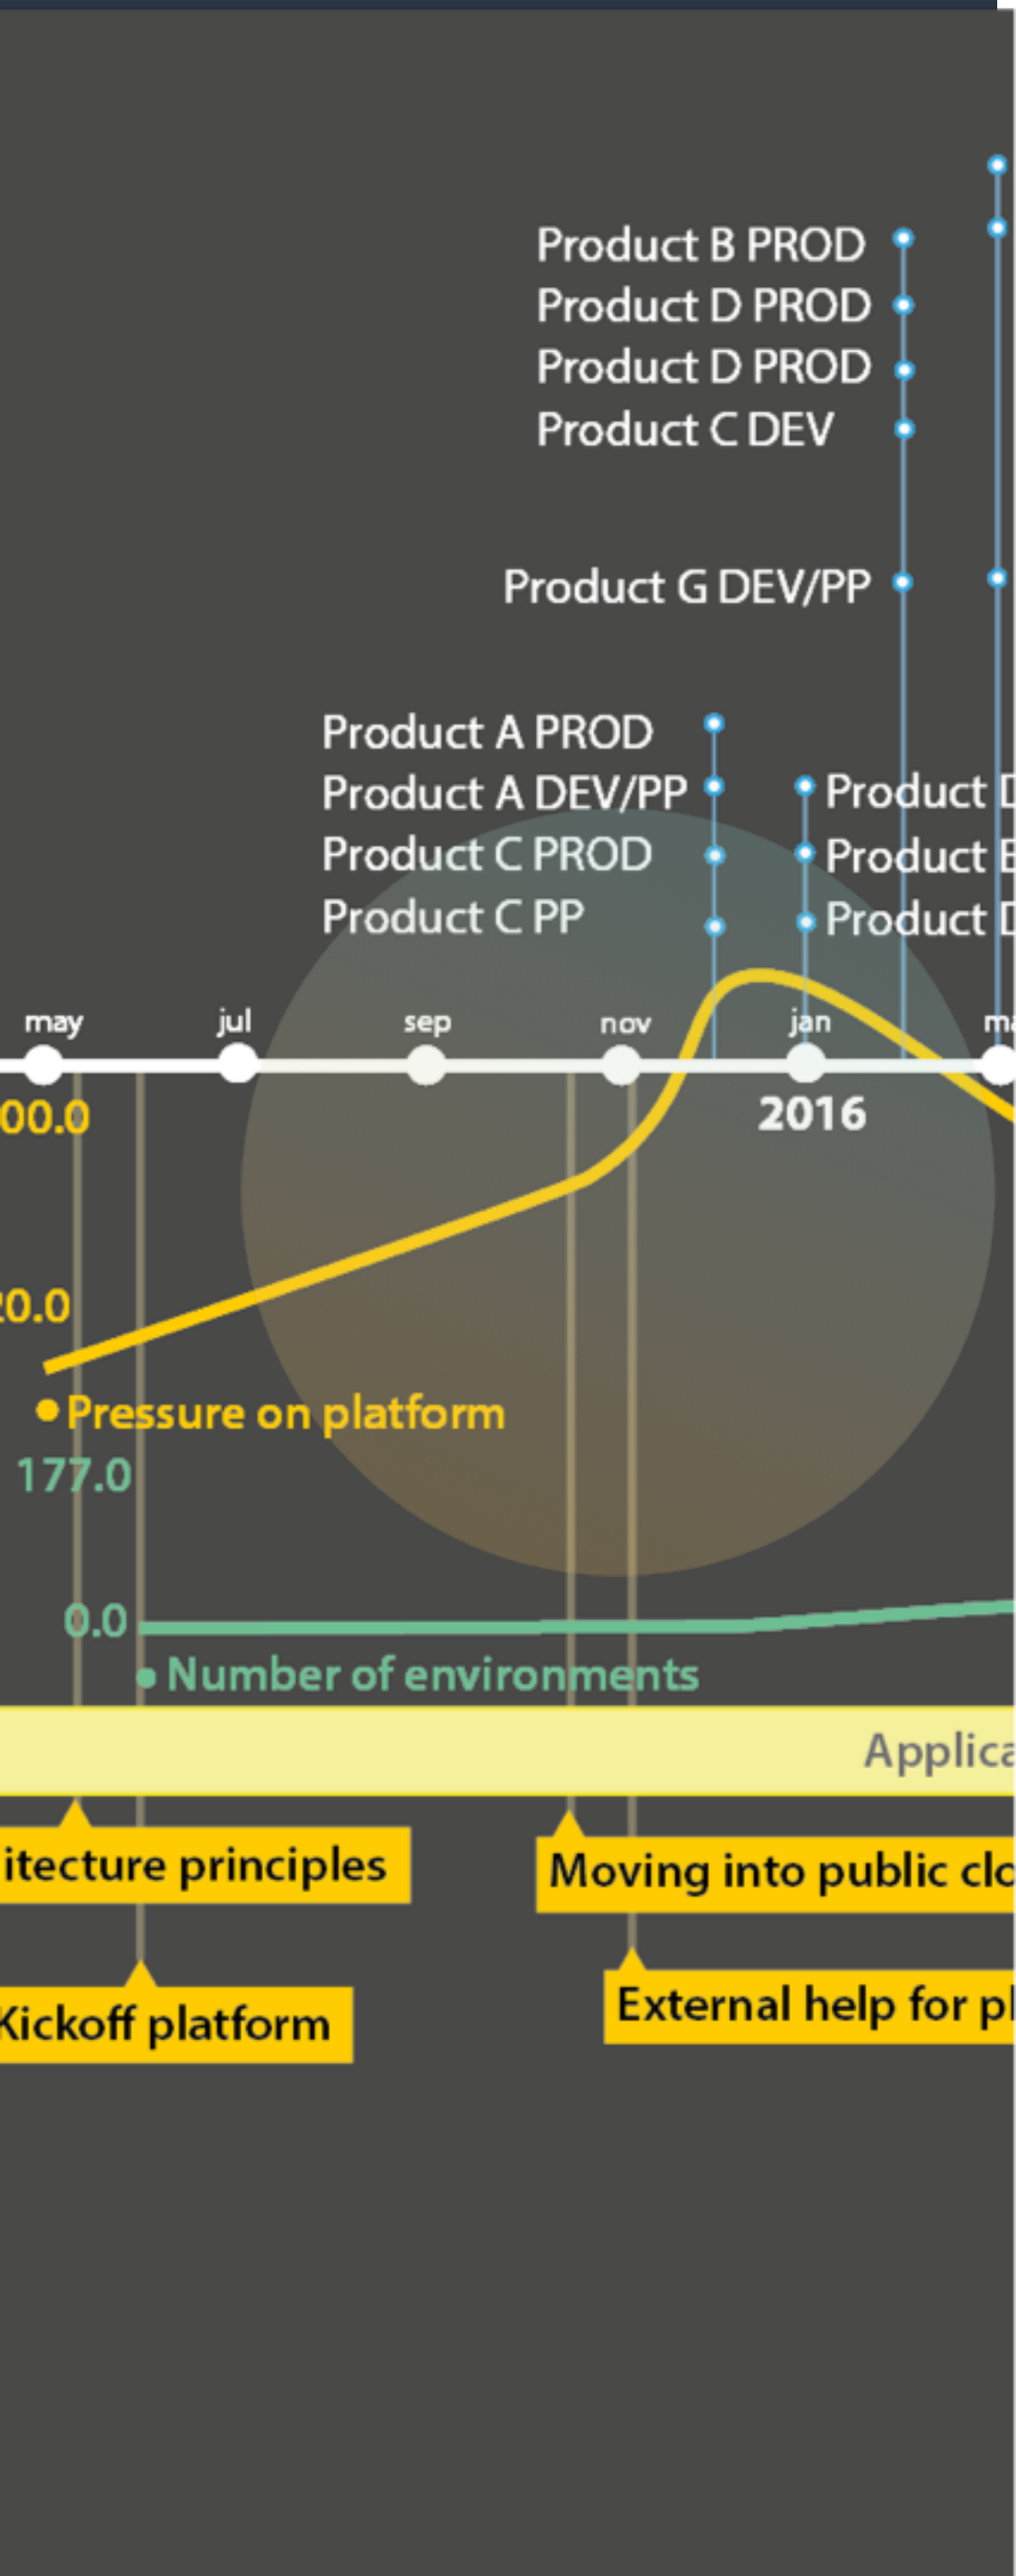

„We need a platform!“

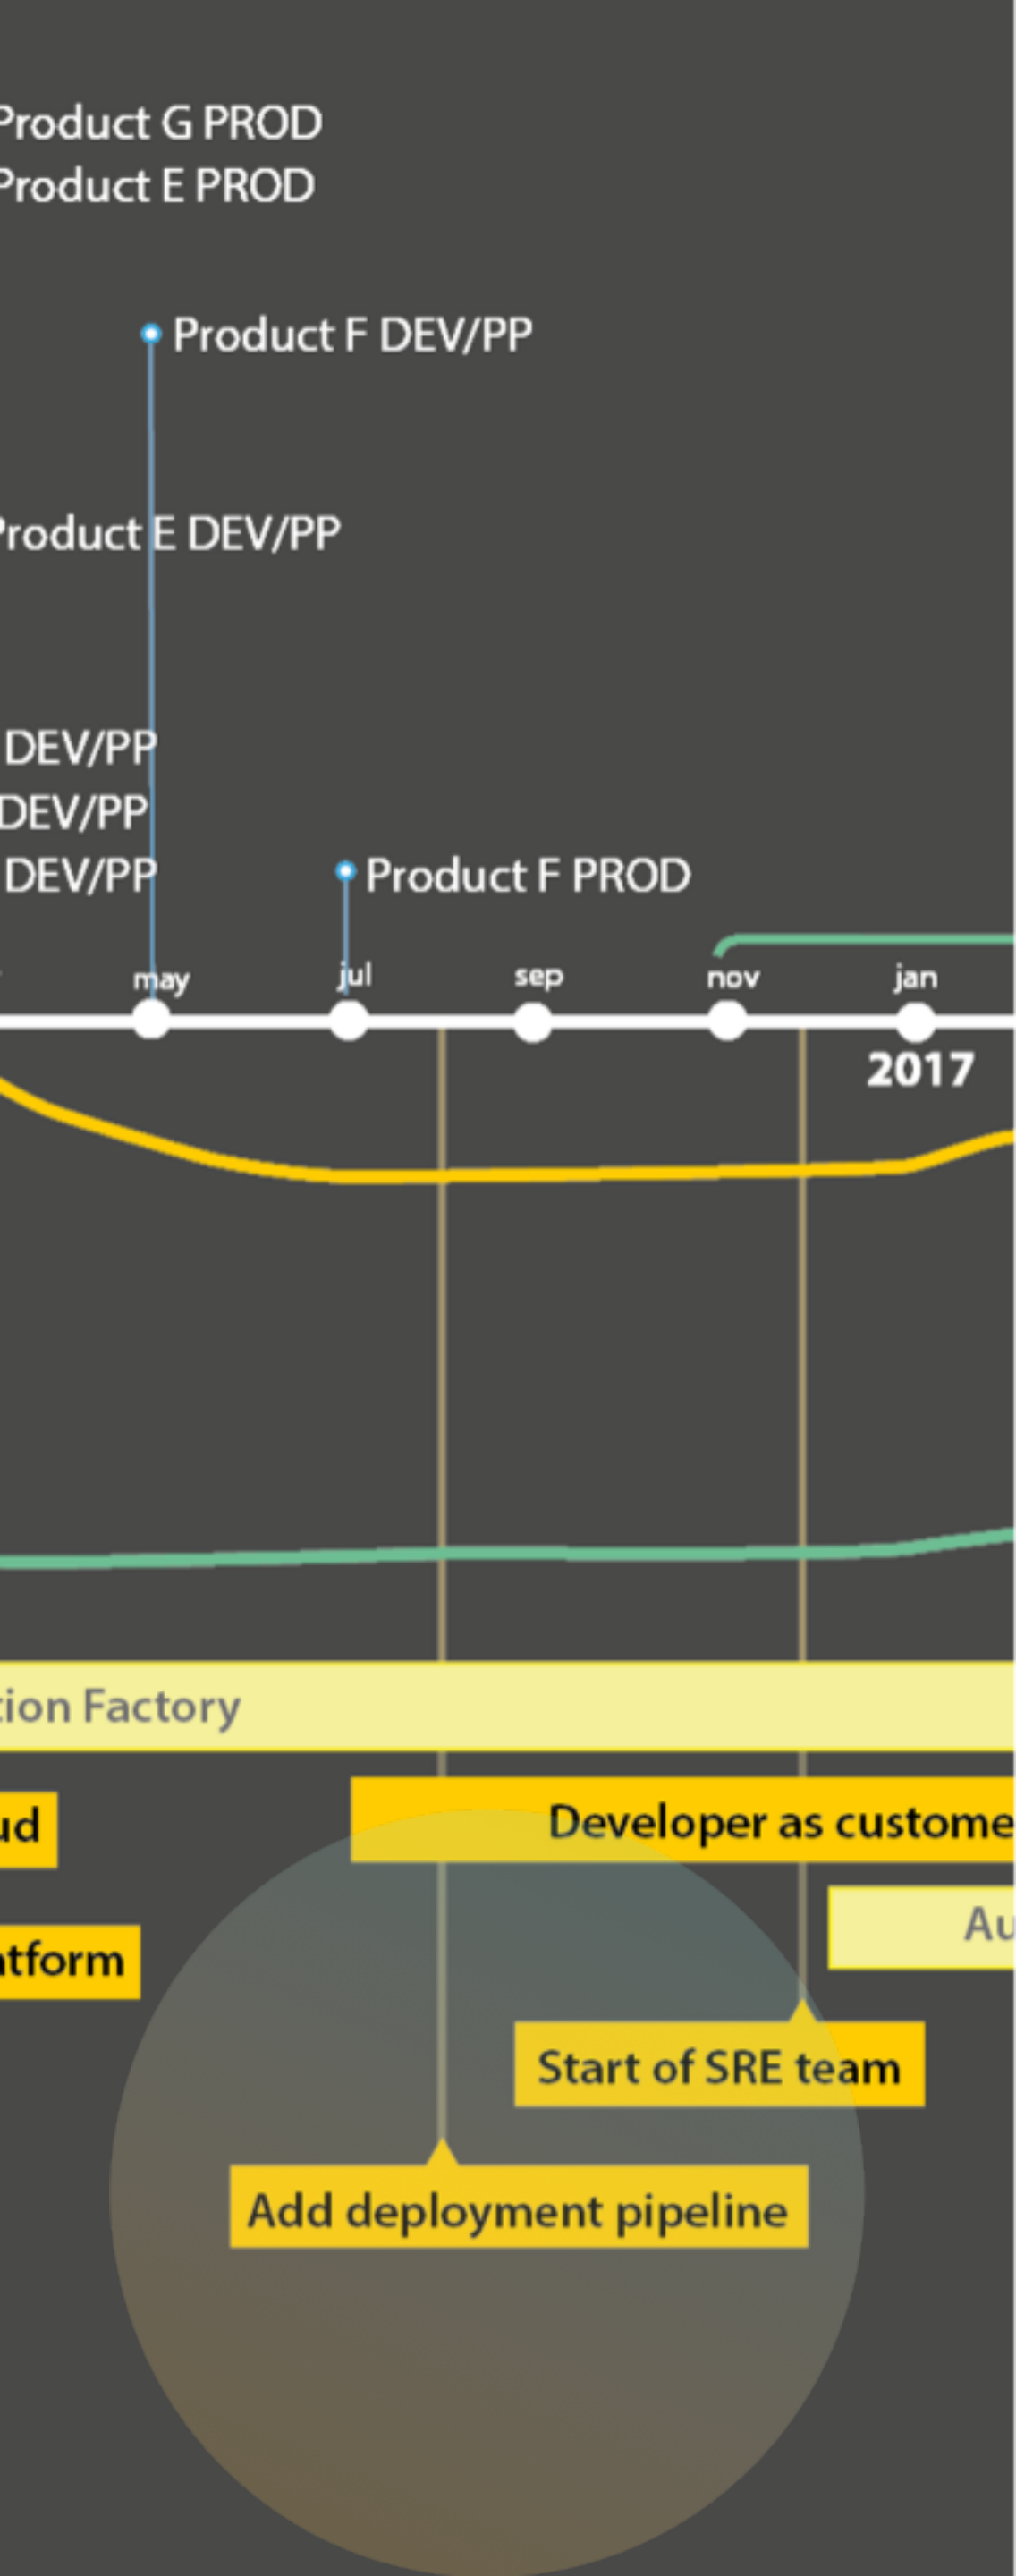

Initial platform setup

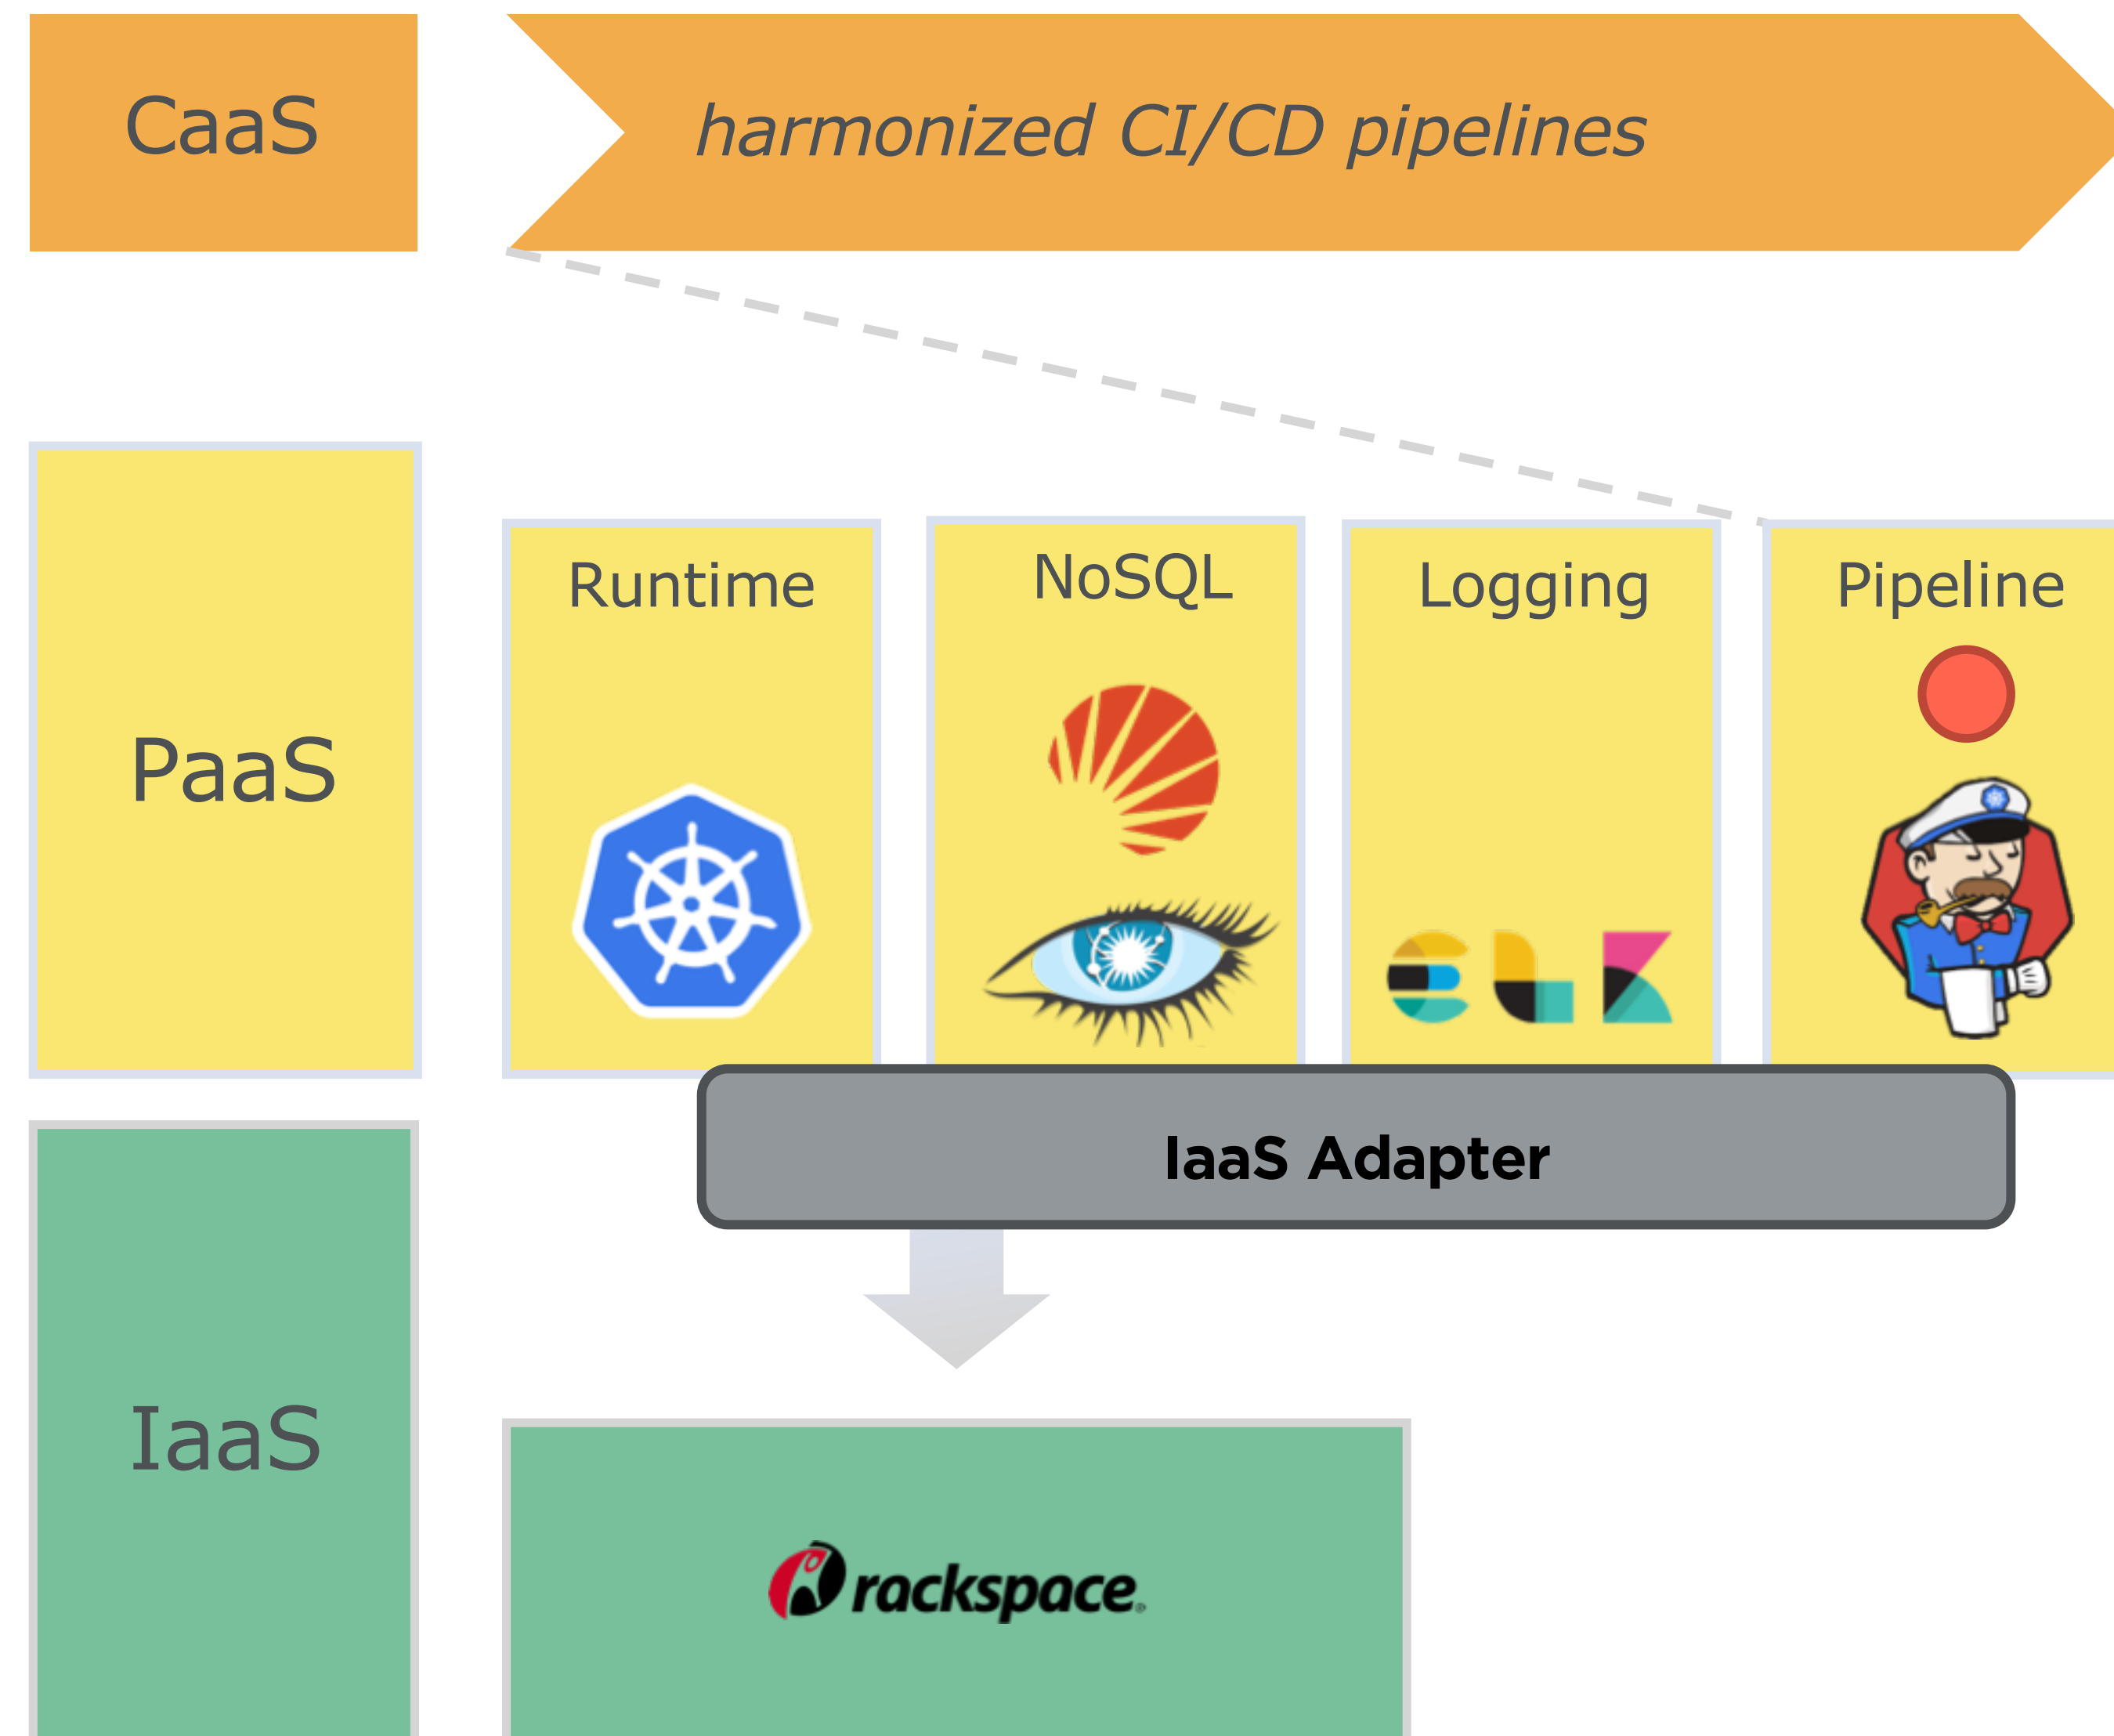

Pressure increases, external help

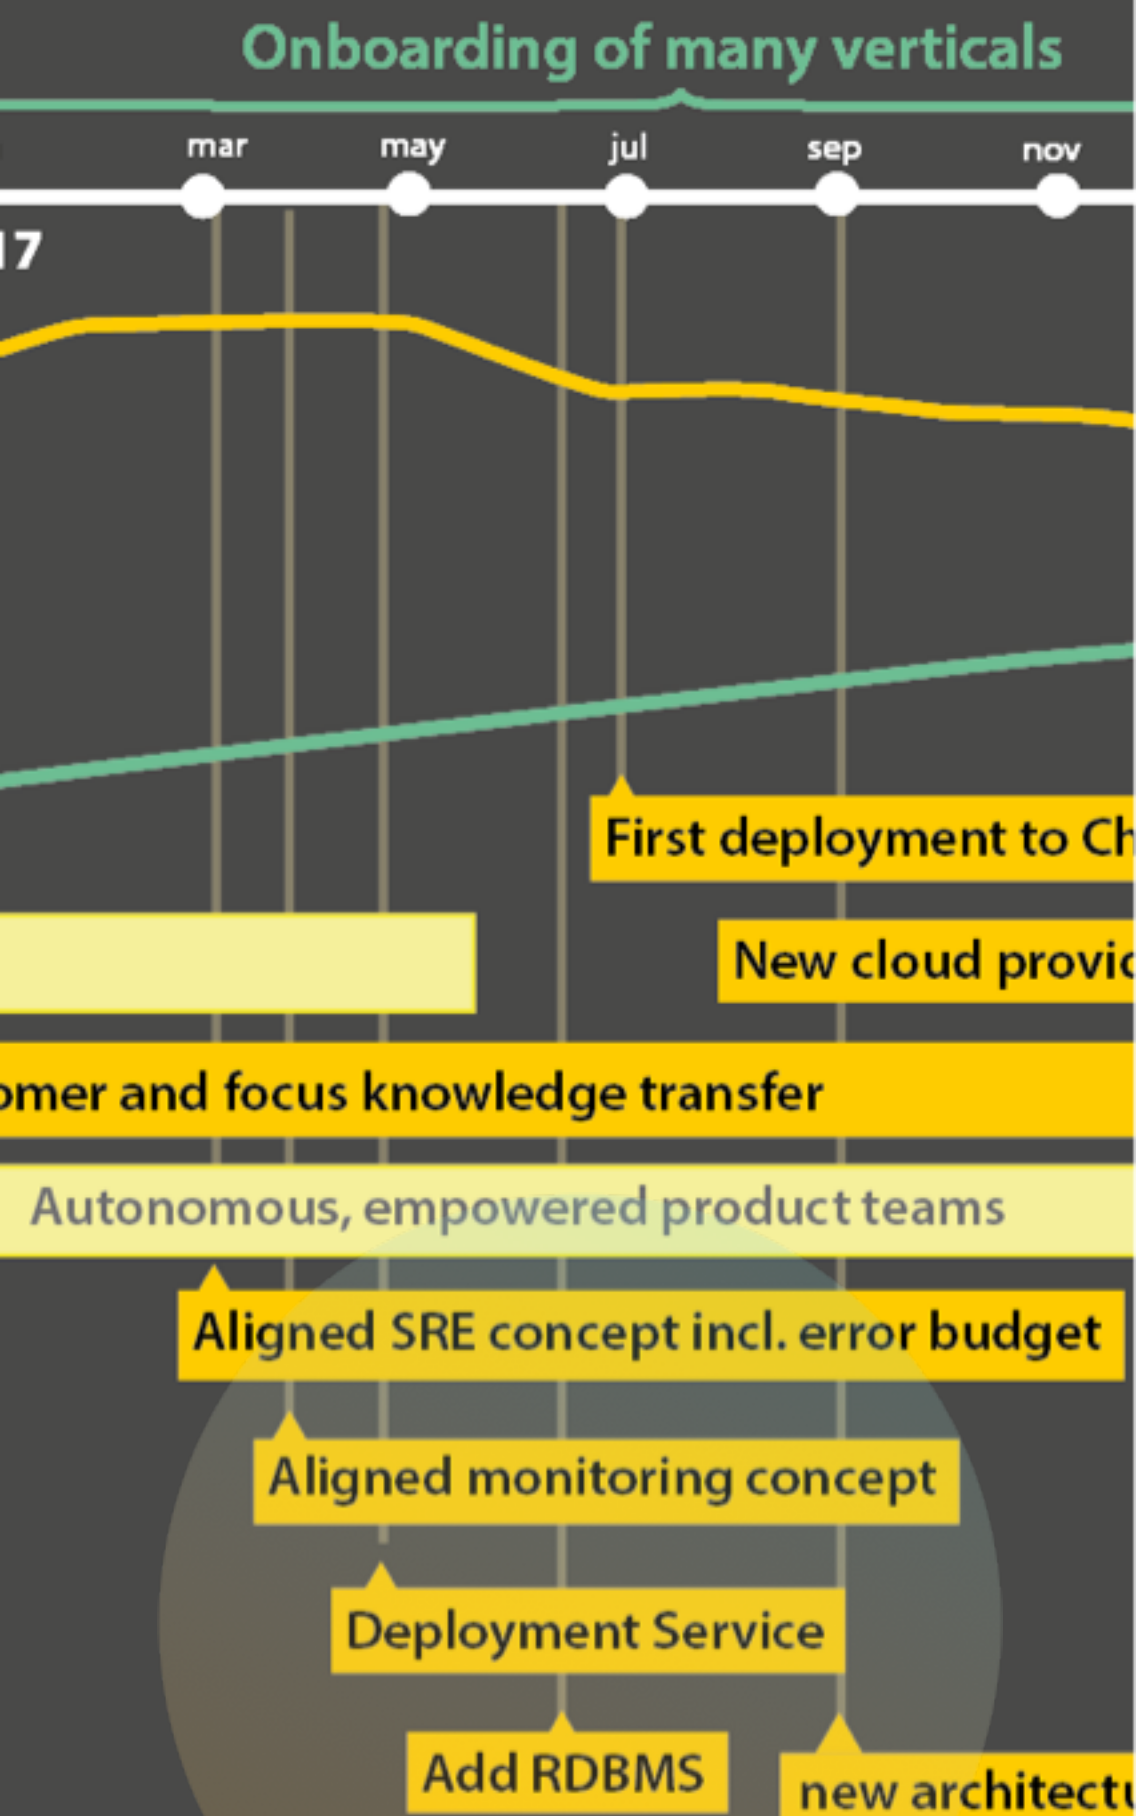

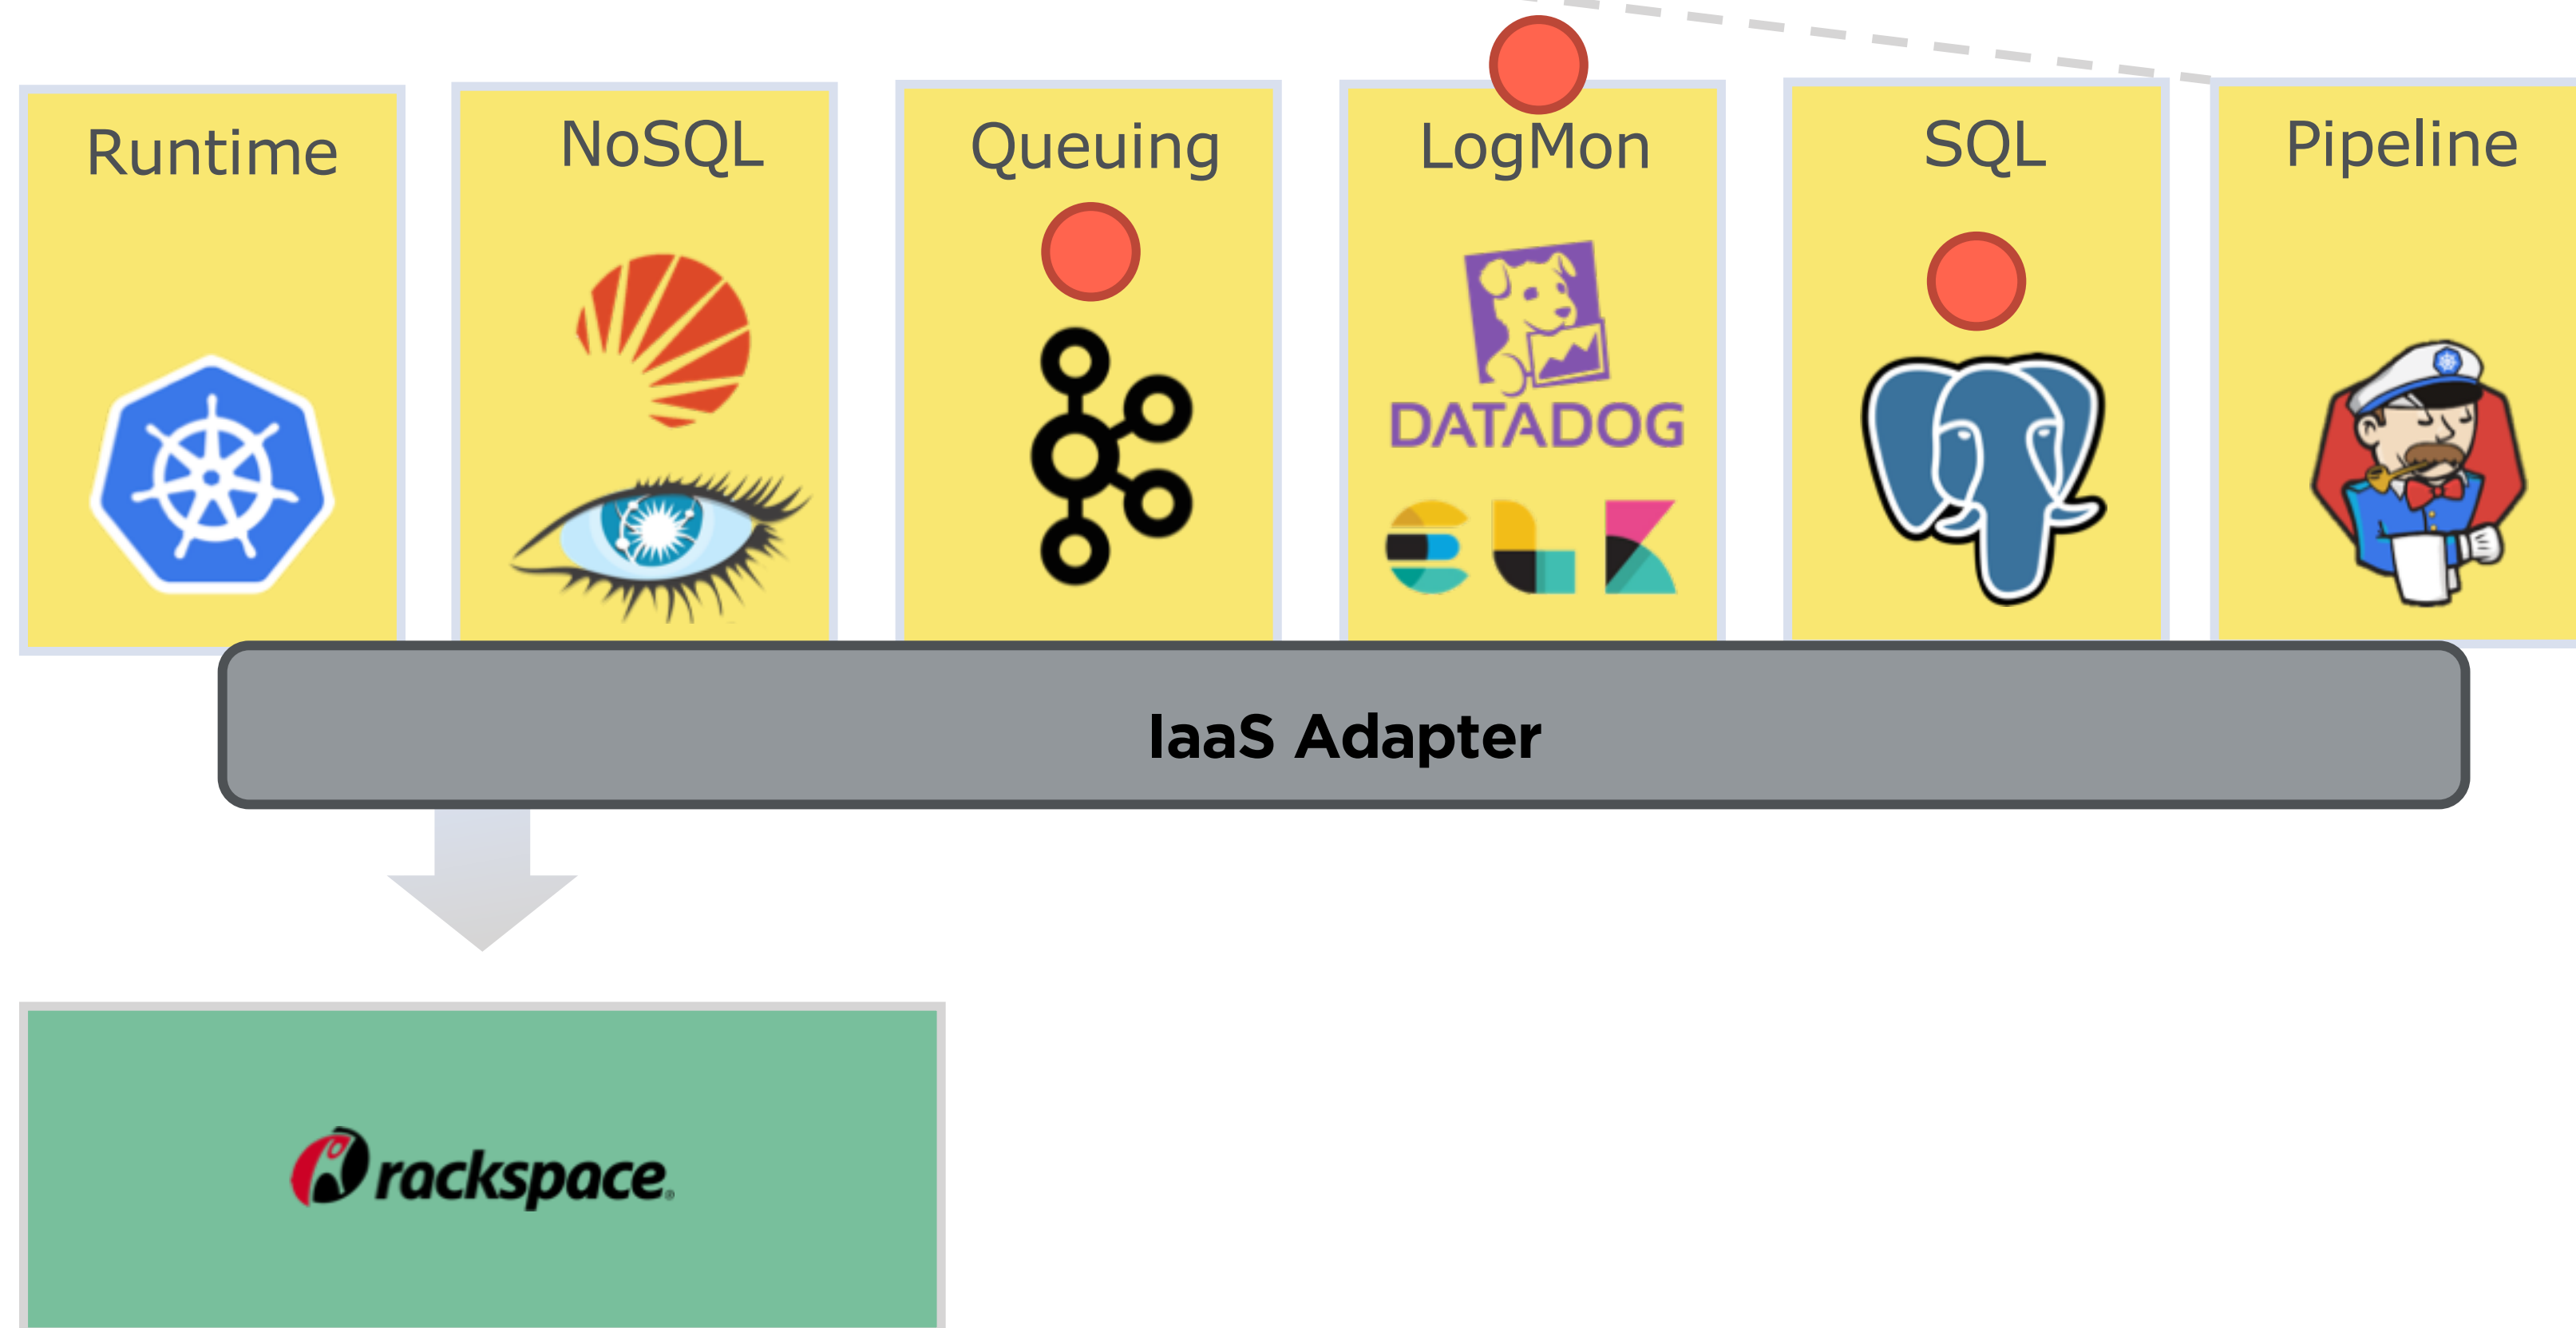

Add deployment pipeline

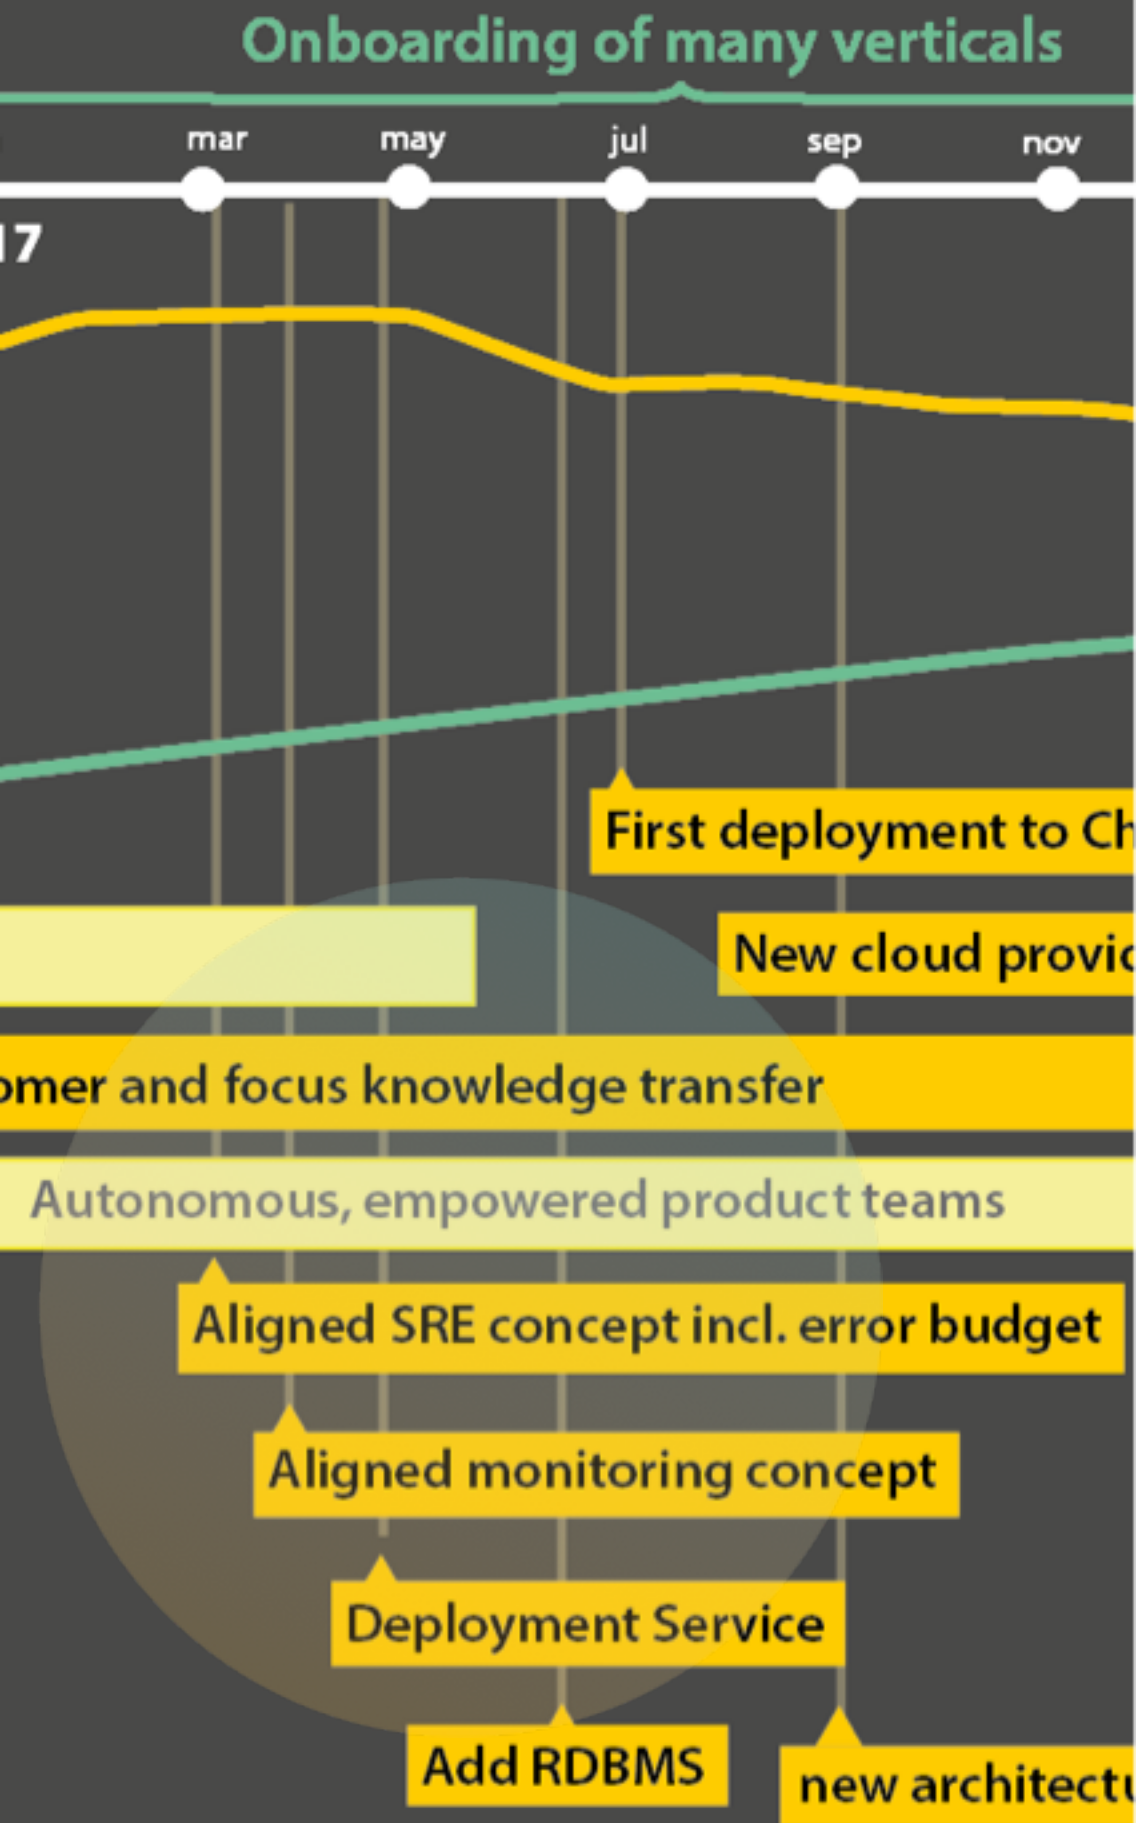

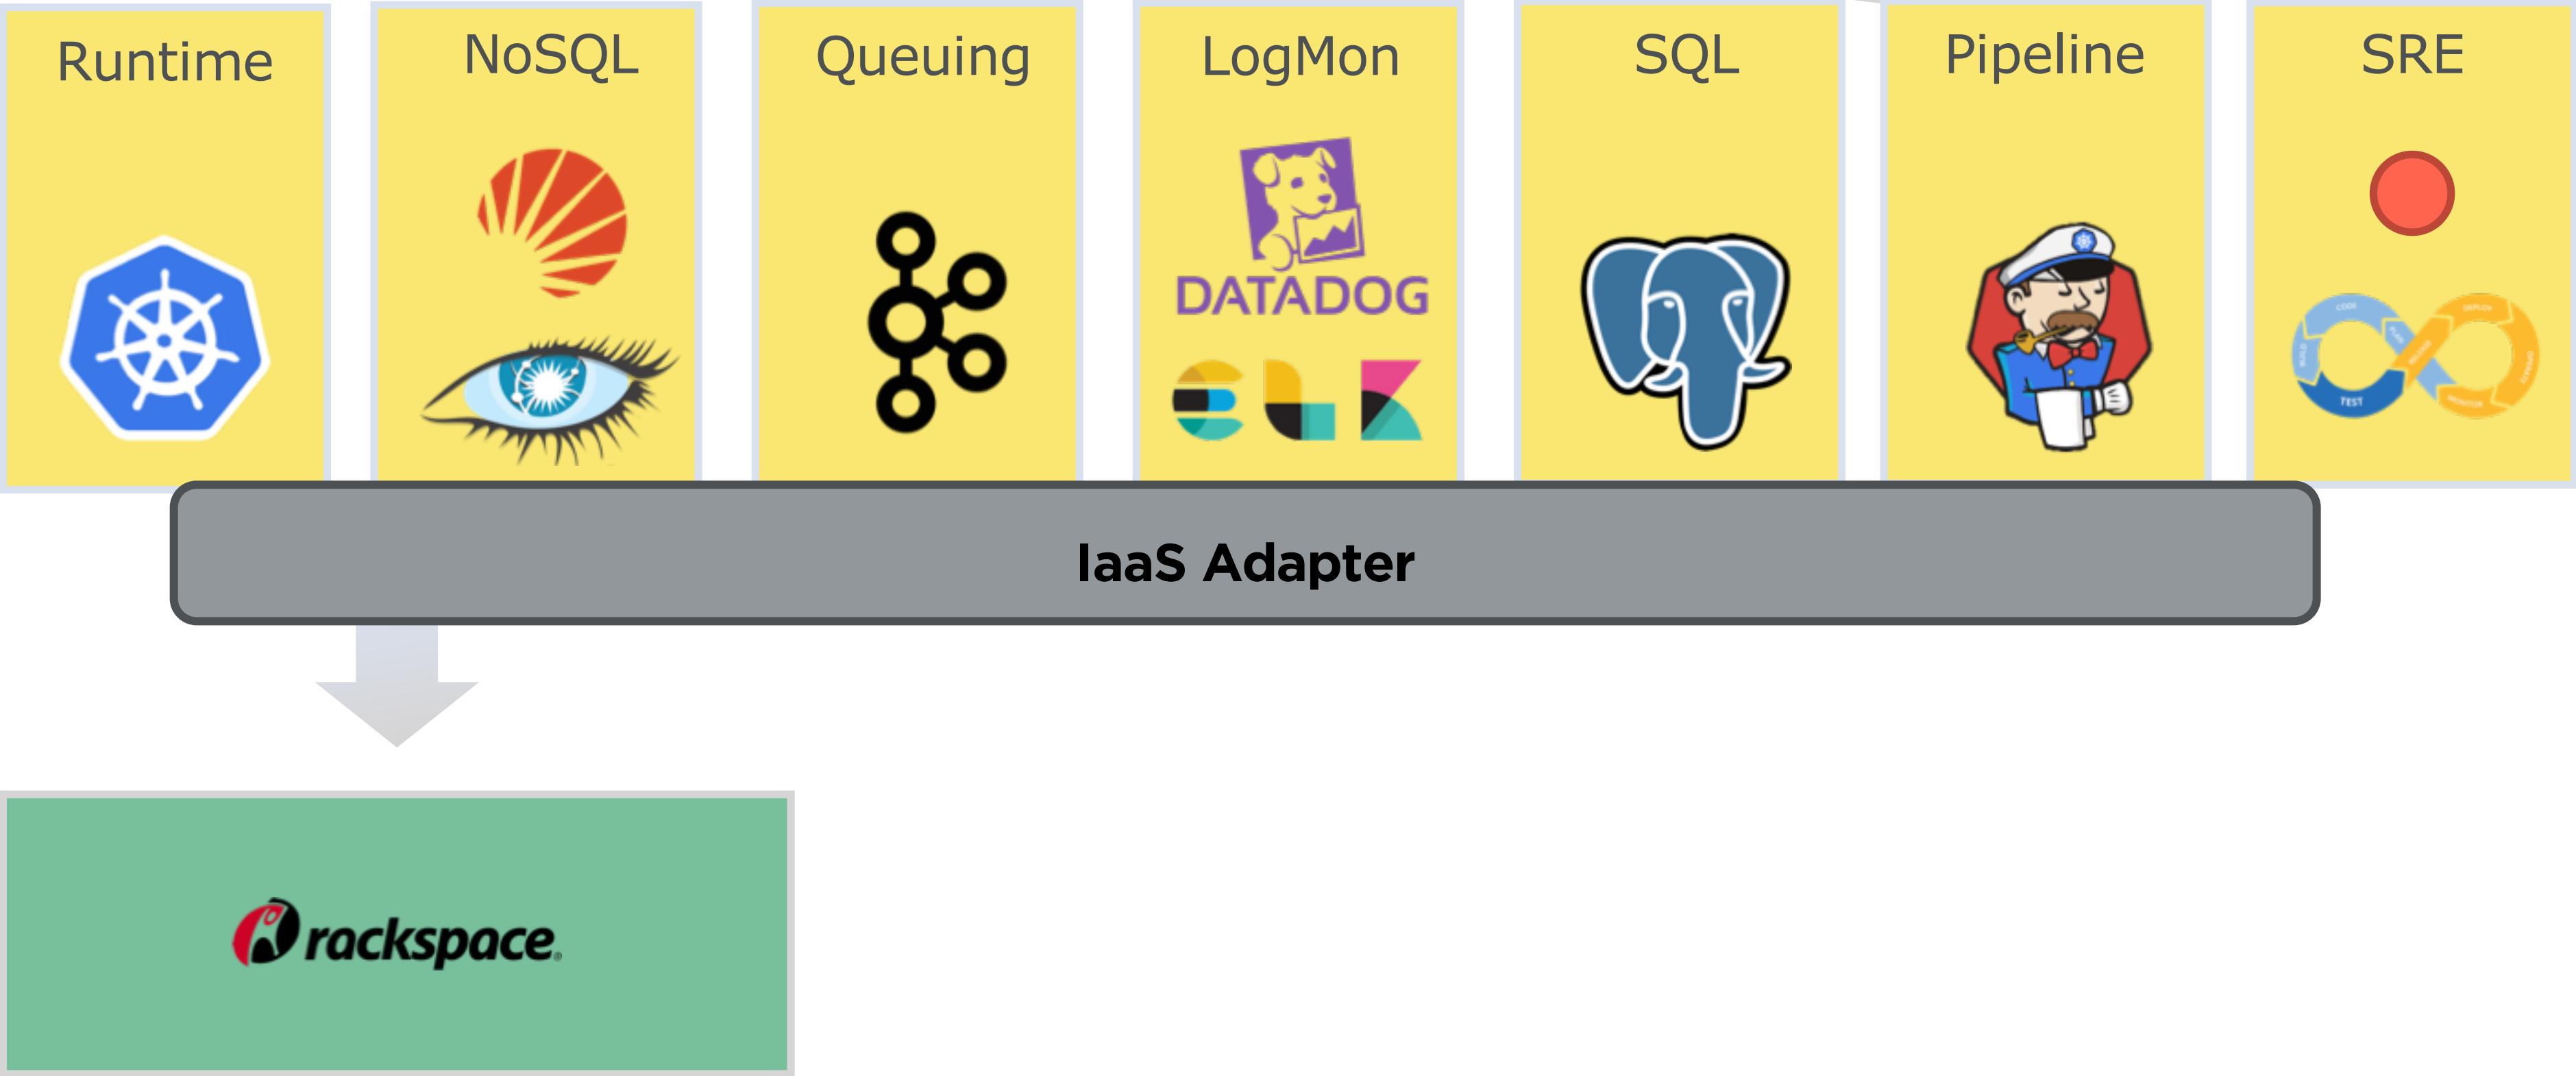

Add new products

harmonized CI/CD pipelines

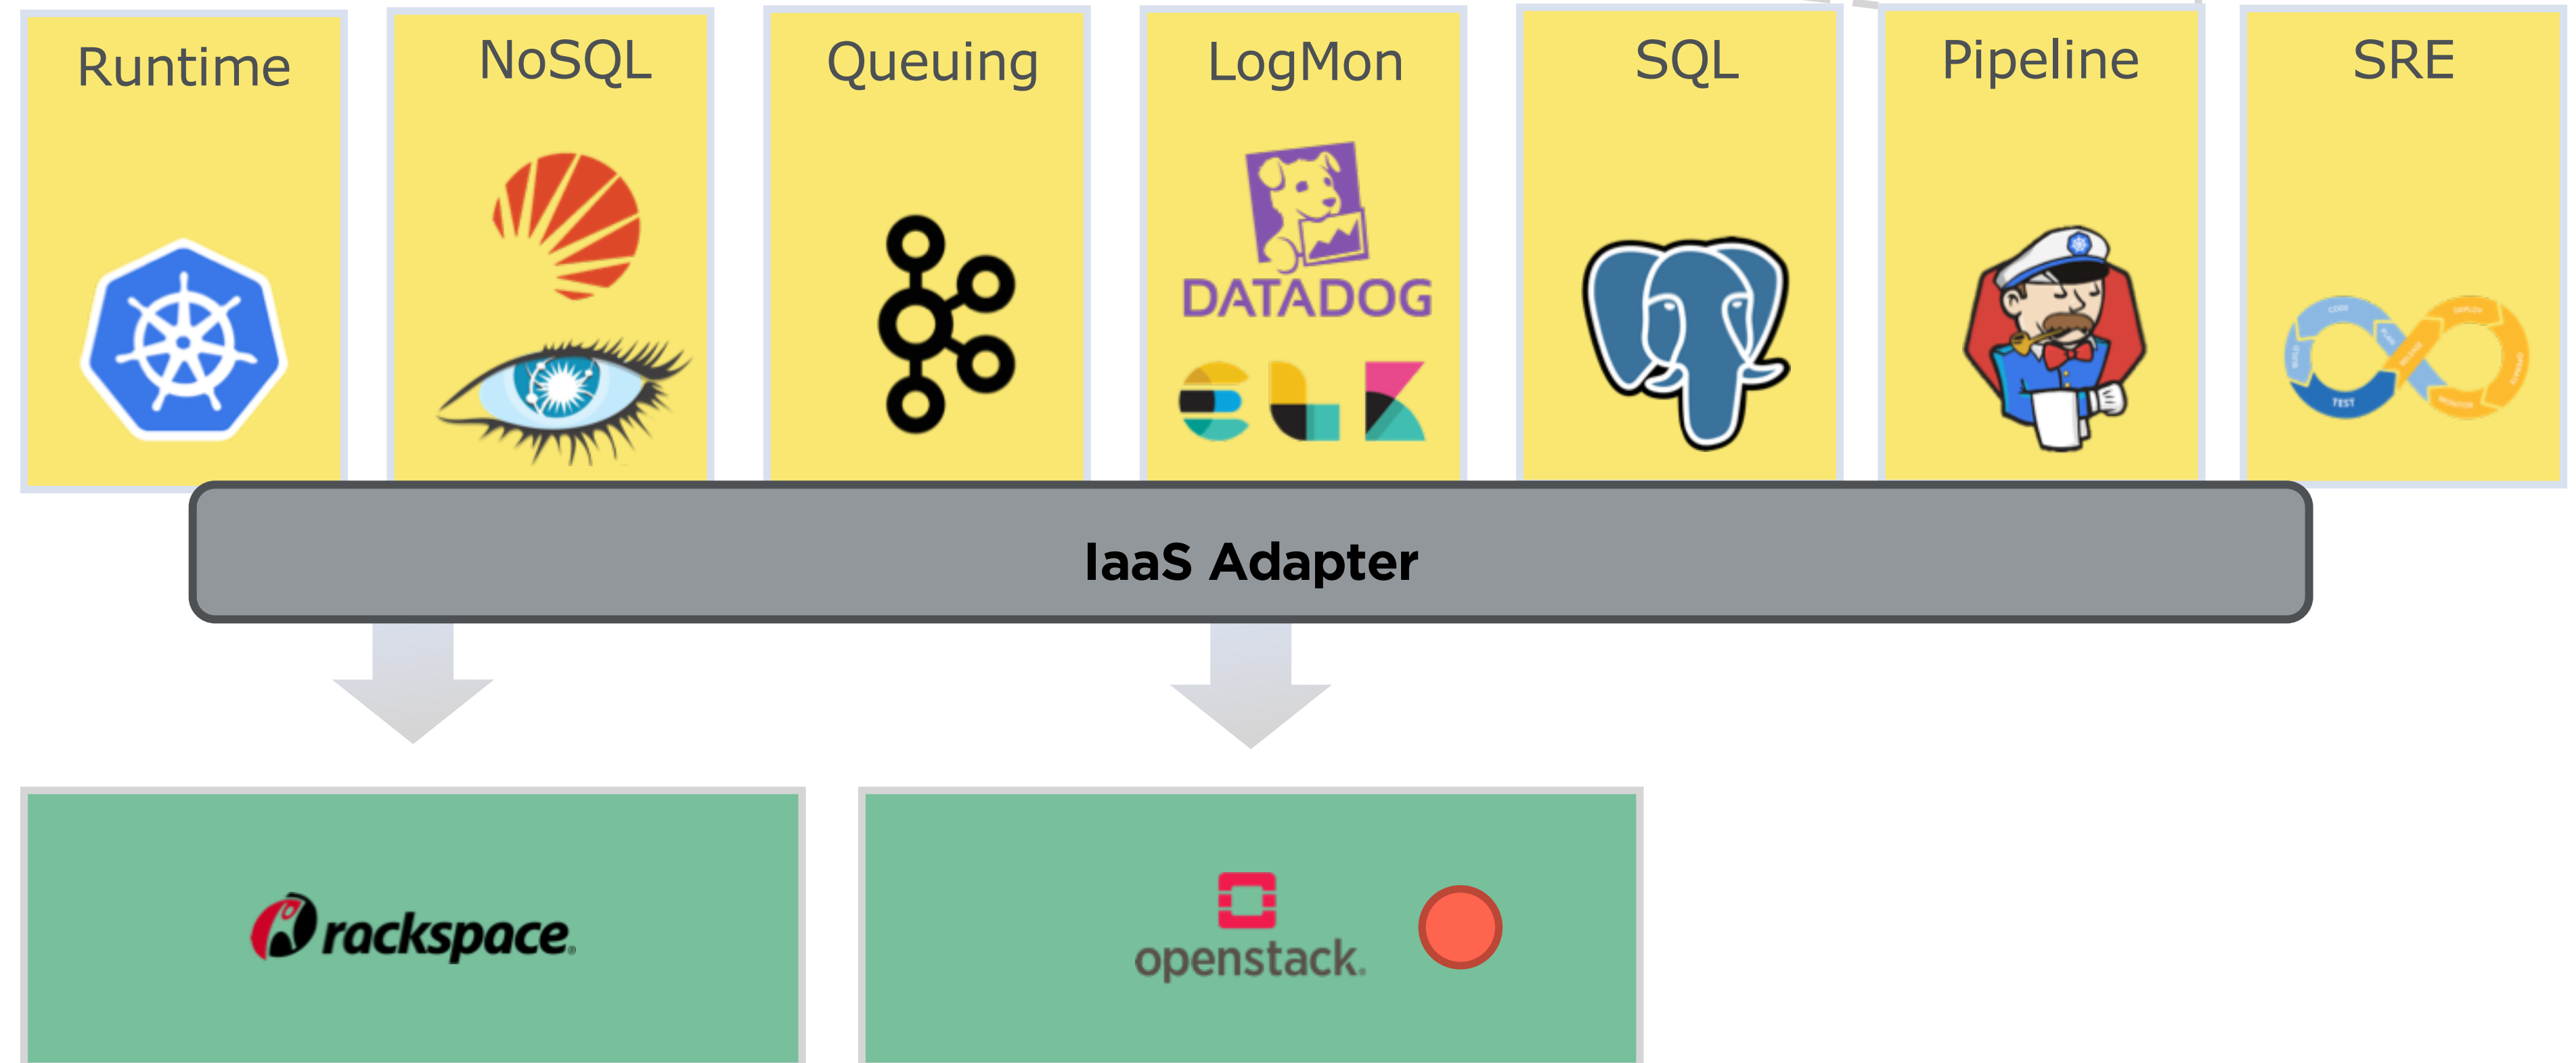

Add SRE team

harmonized CI/CD pipelines

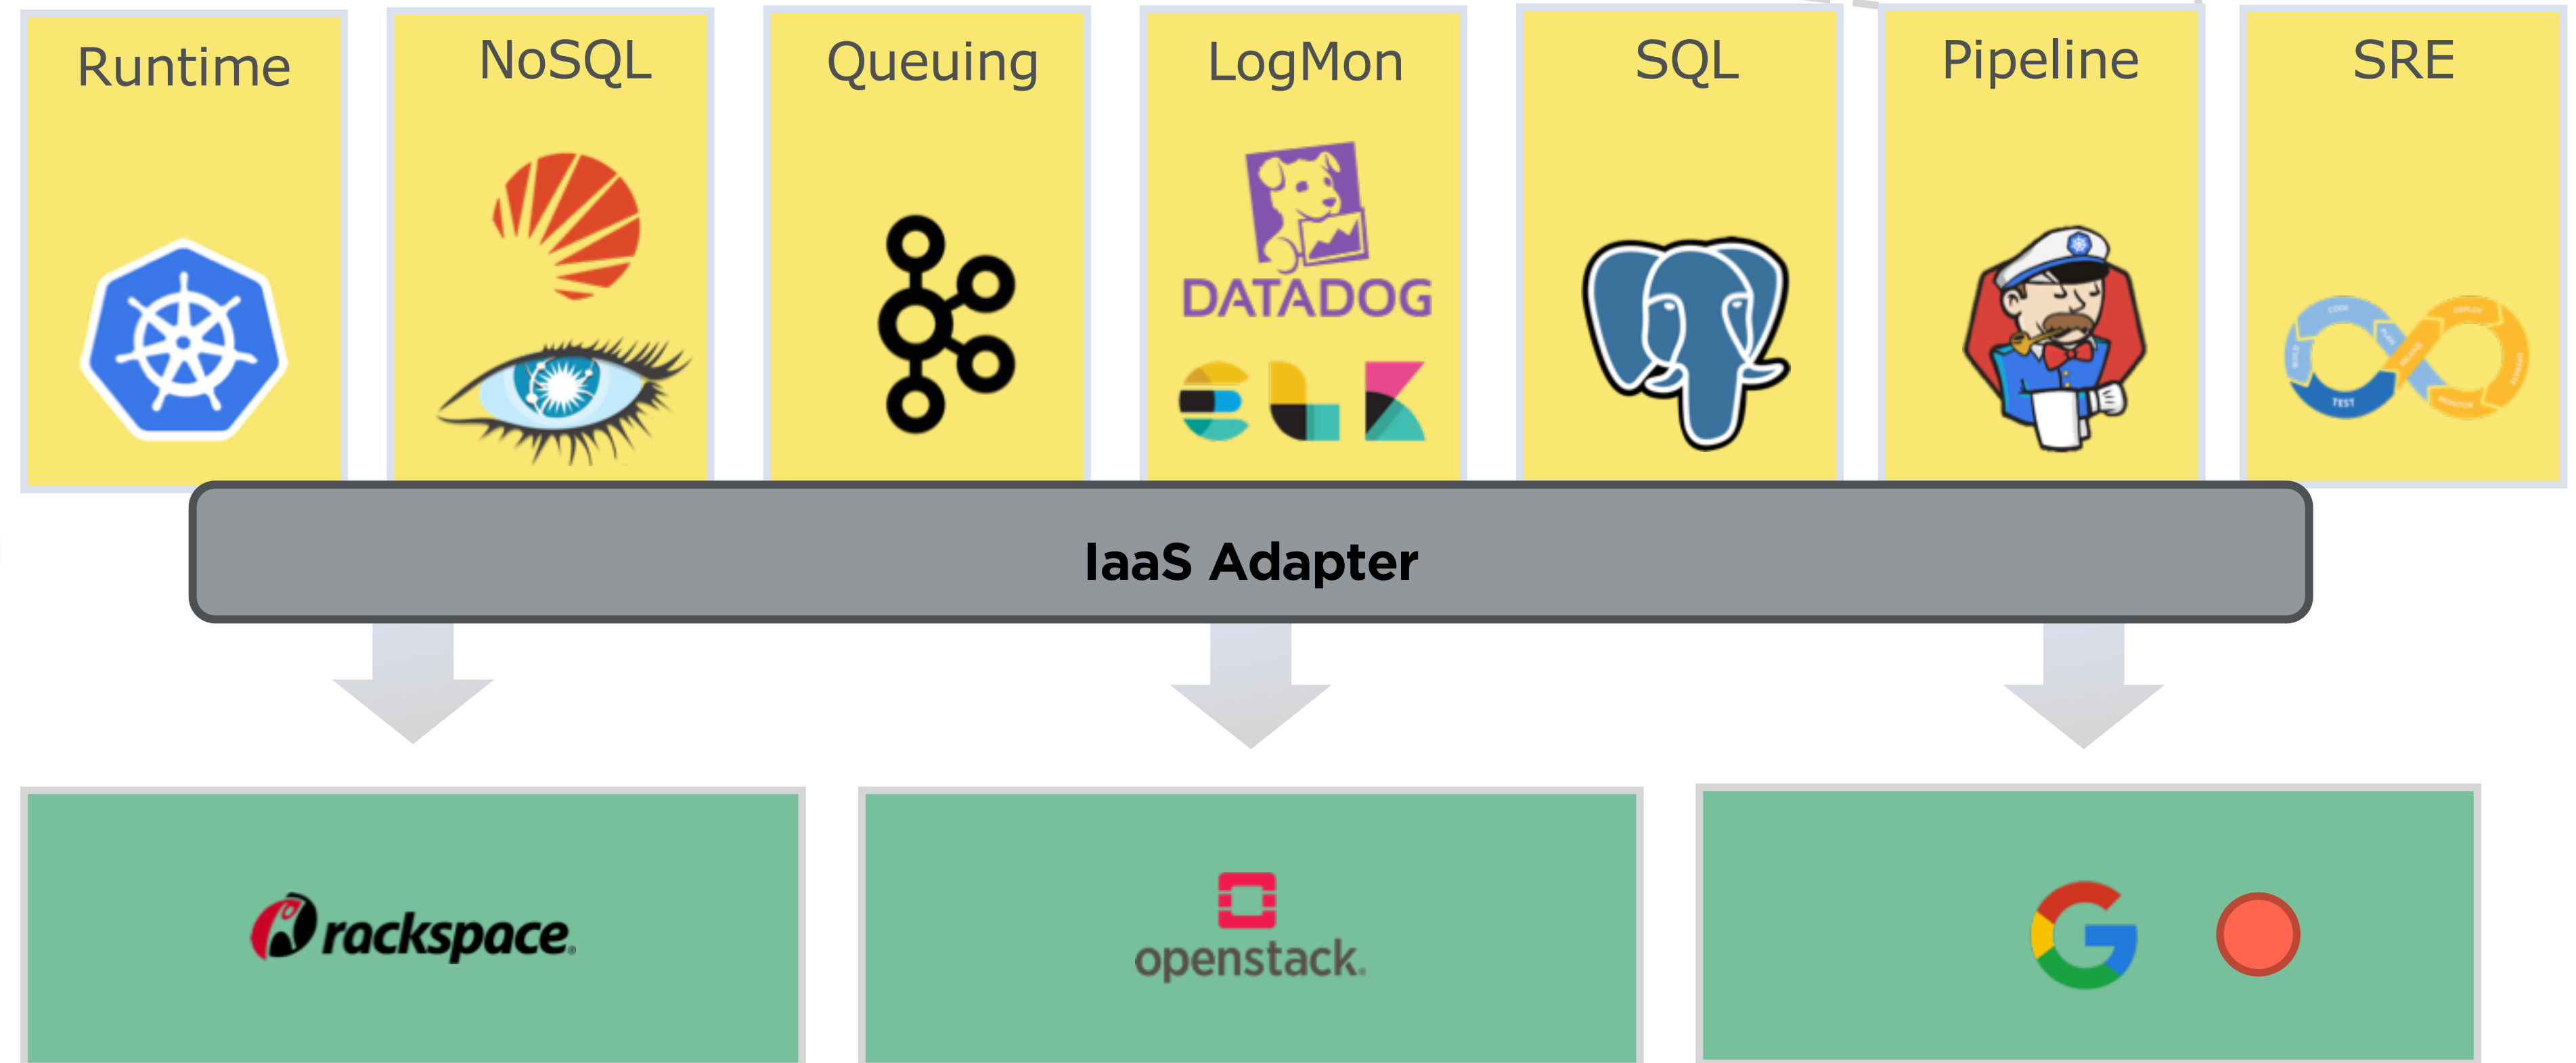

New datacenter in China

harmonized CI/CD pipelines

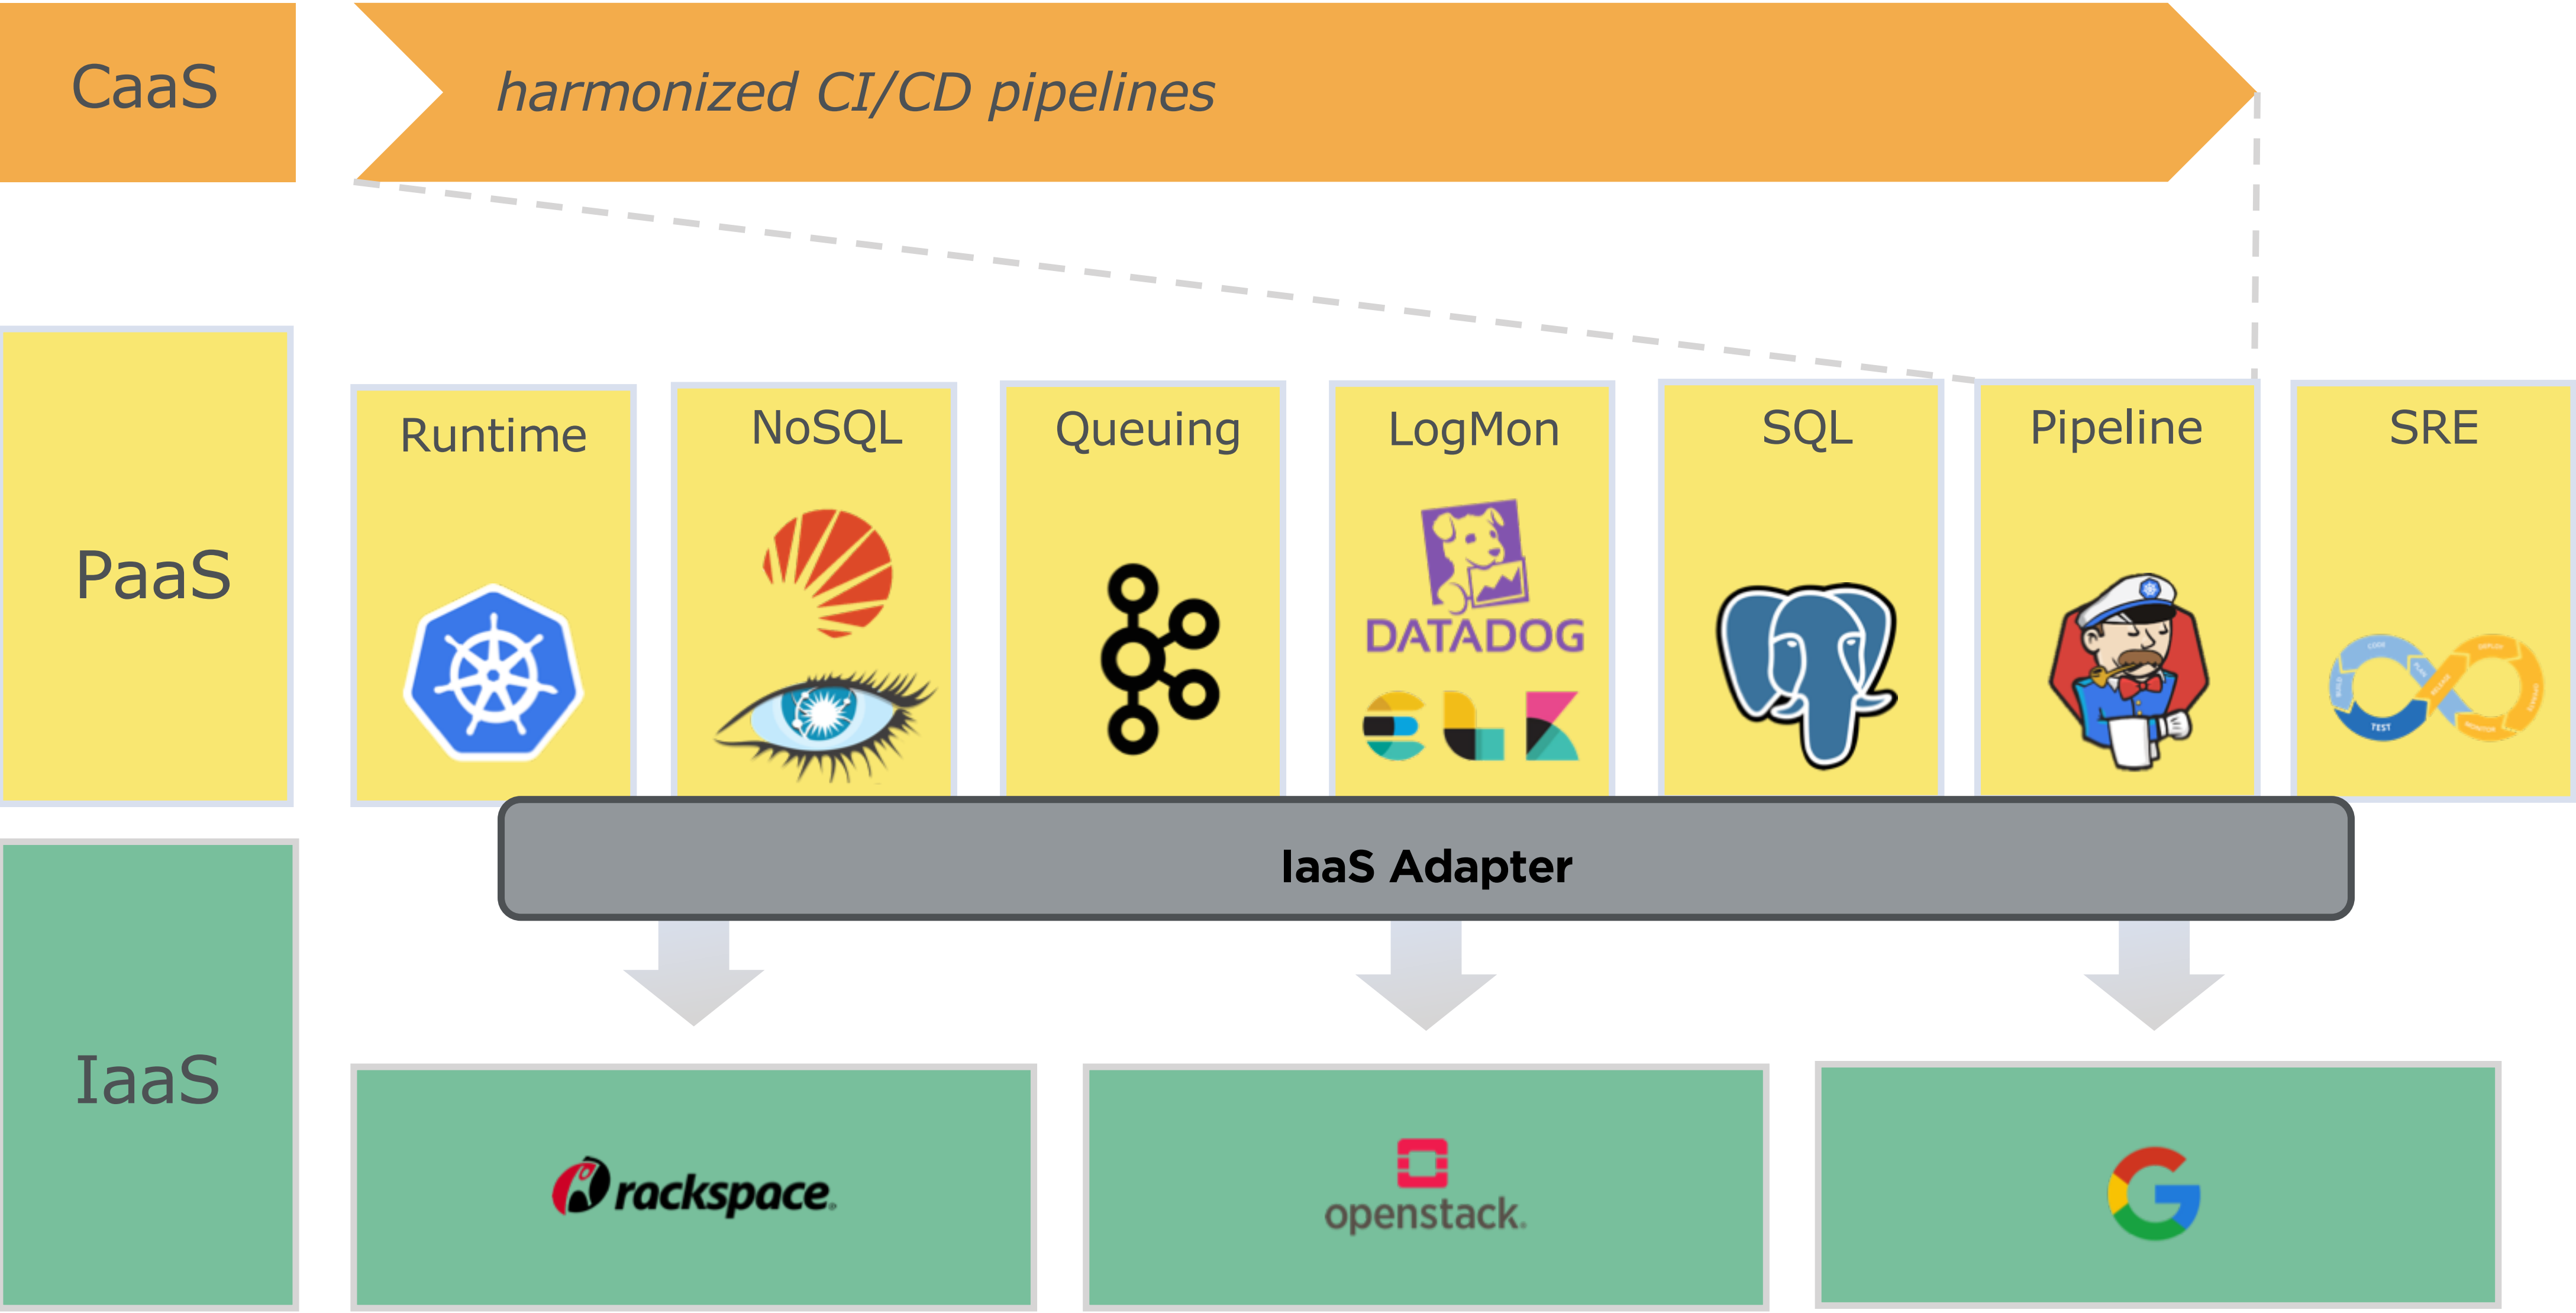

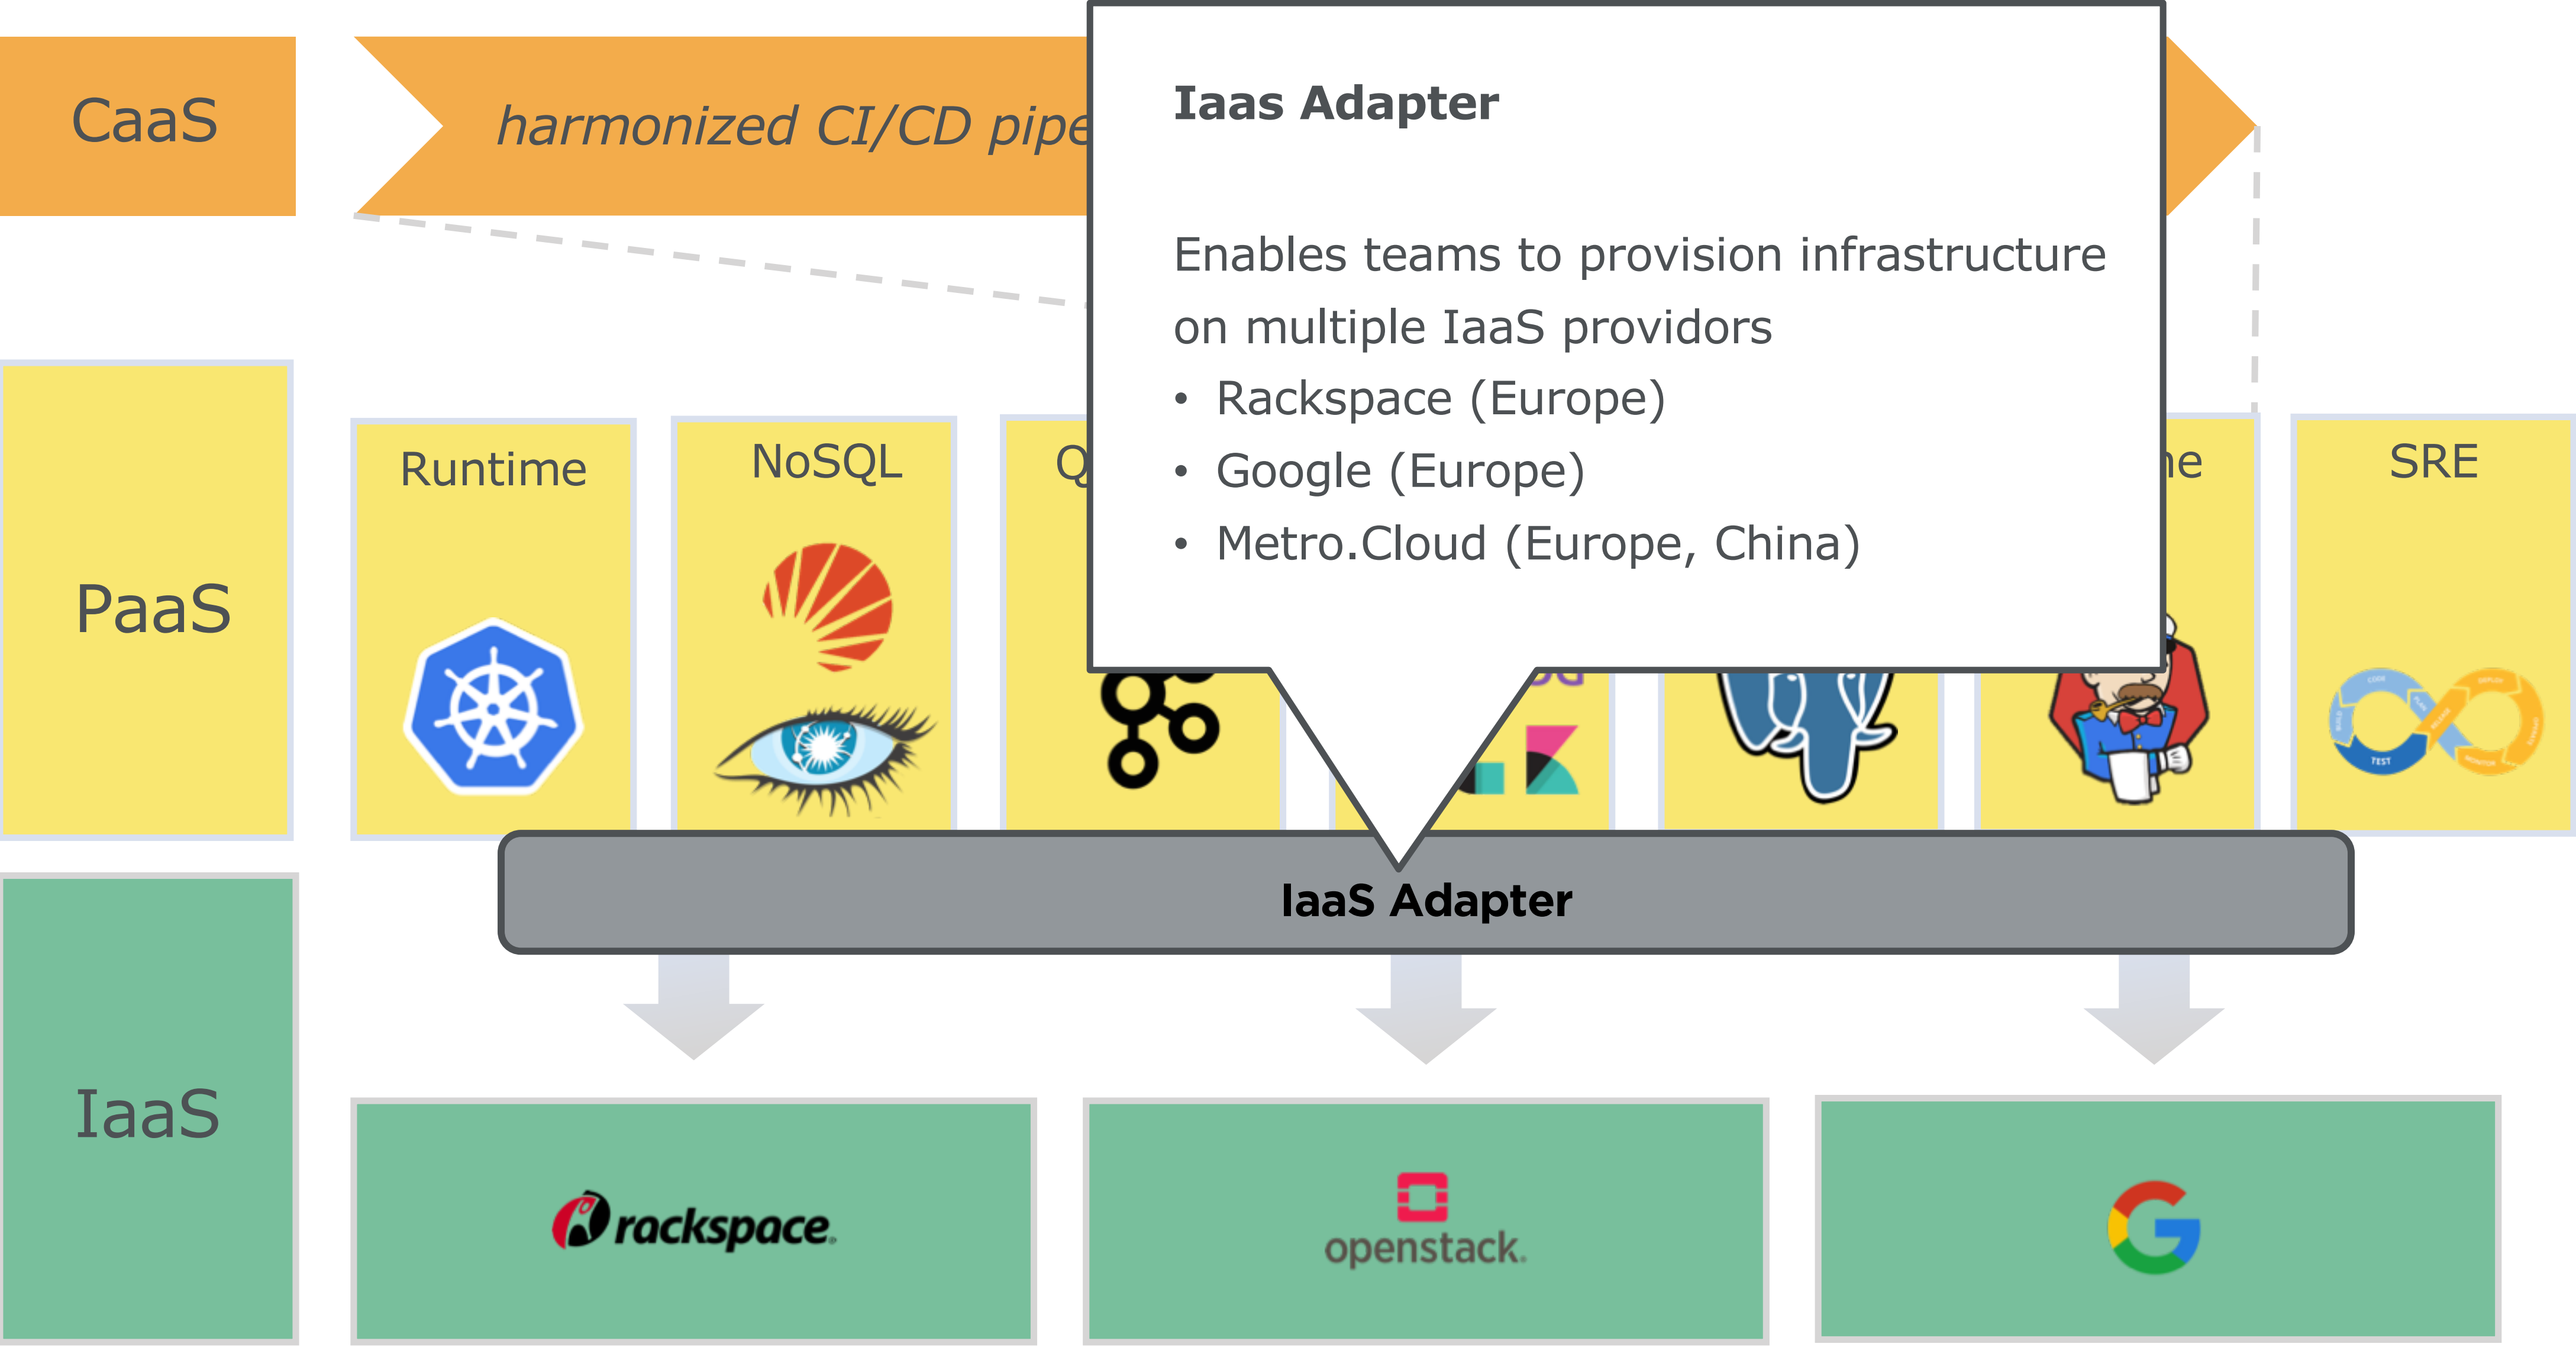

New cloud provider

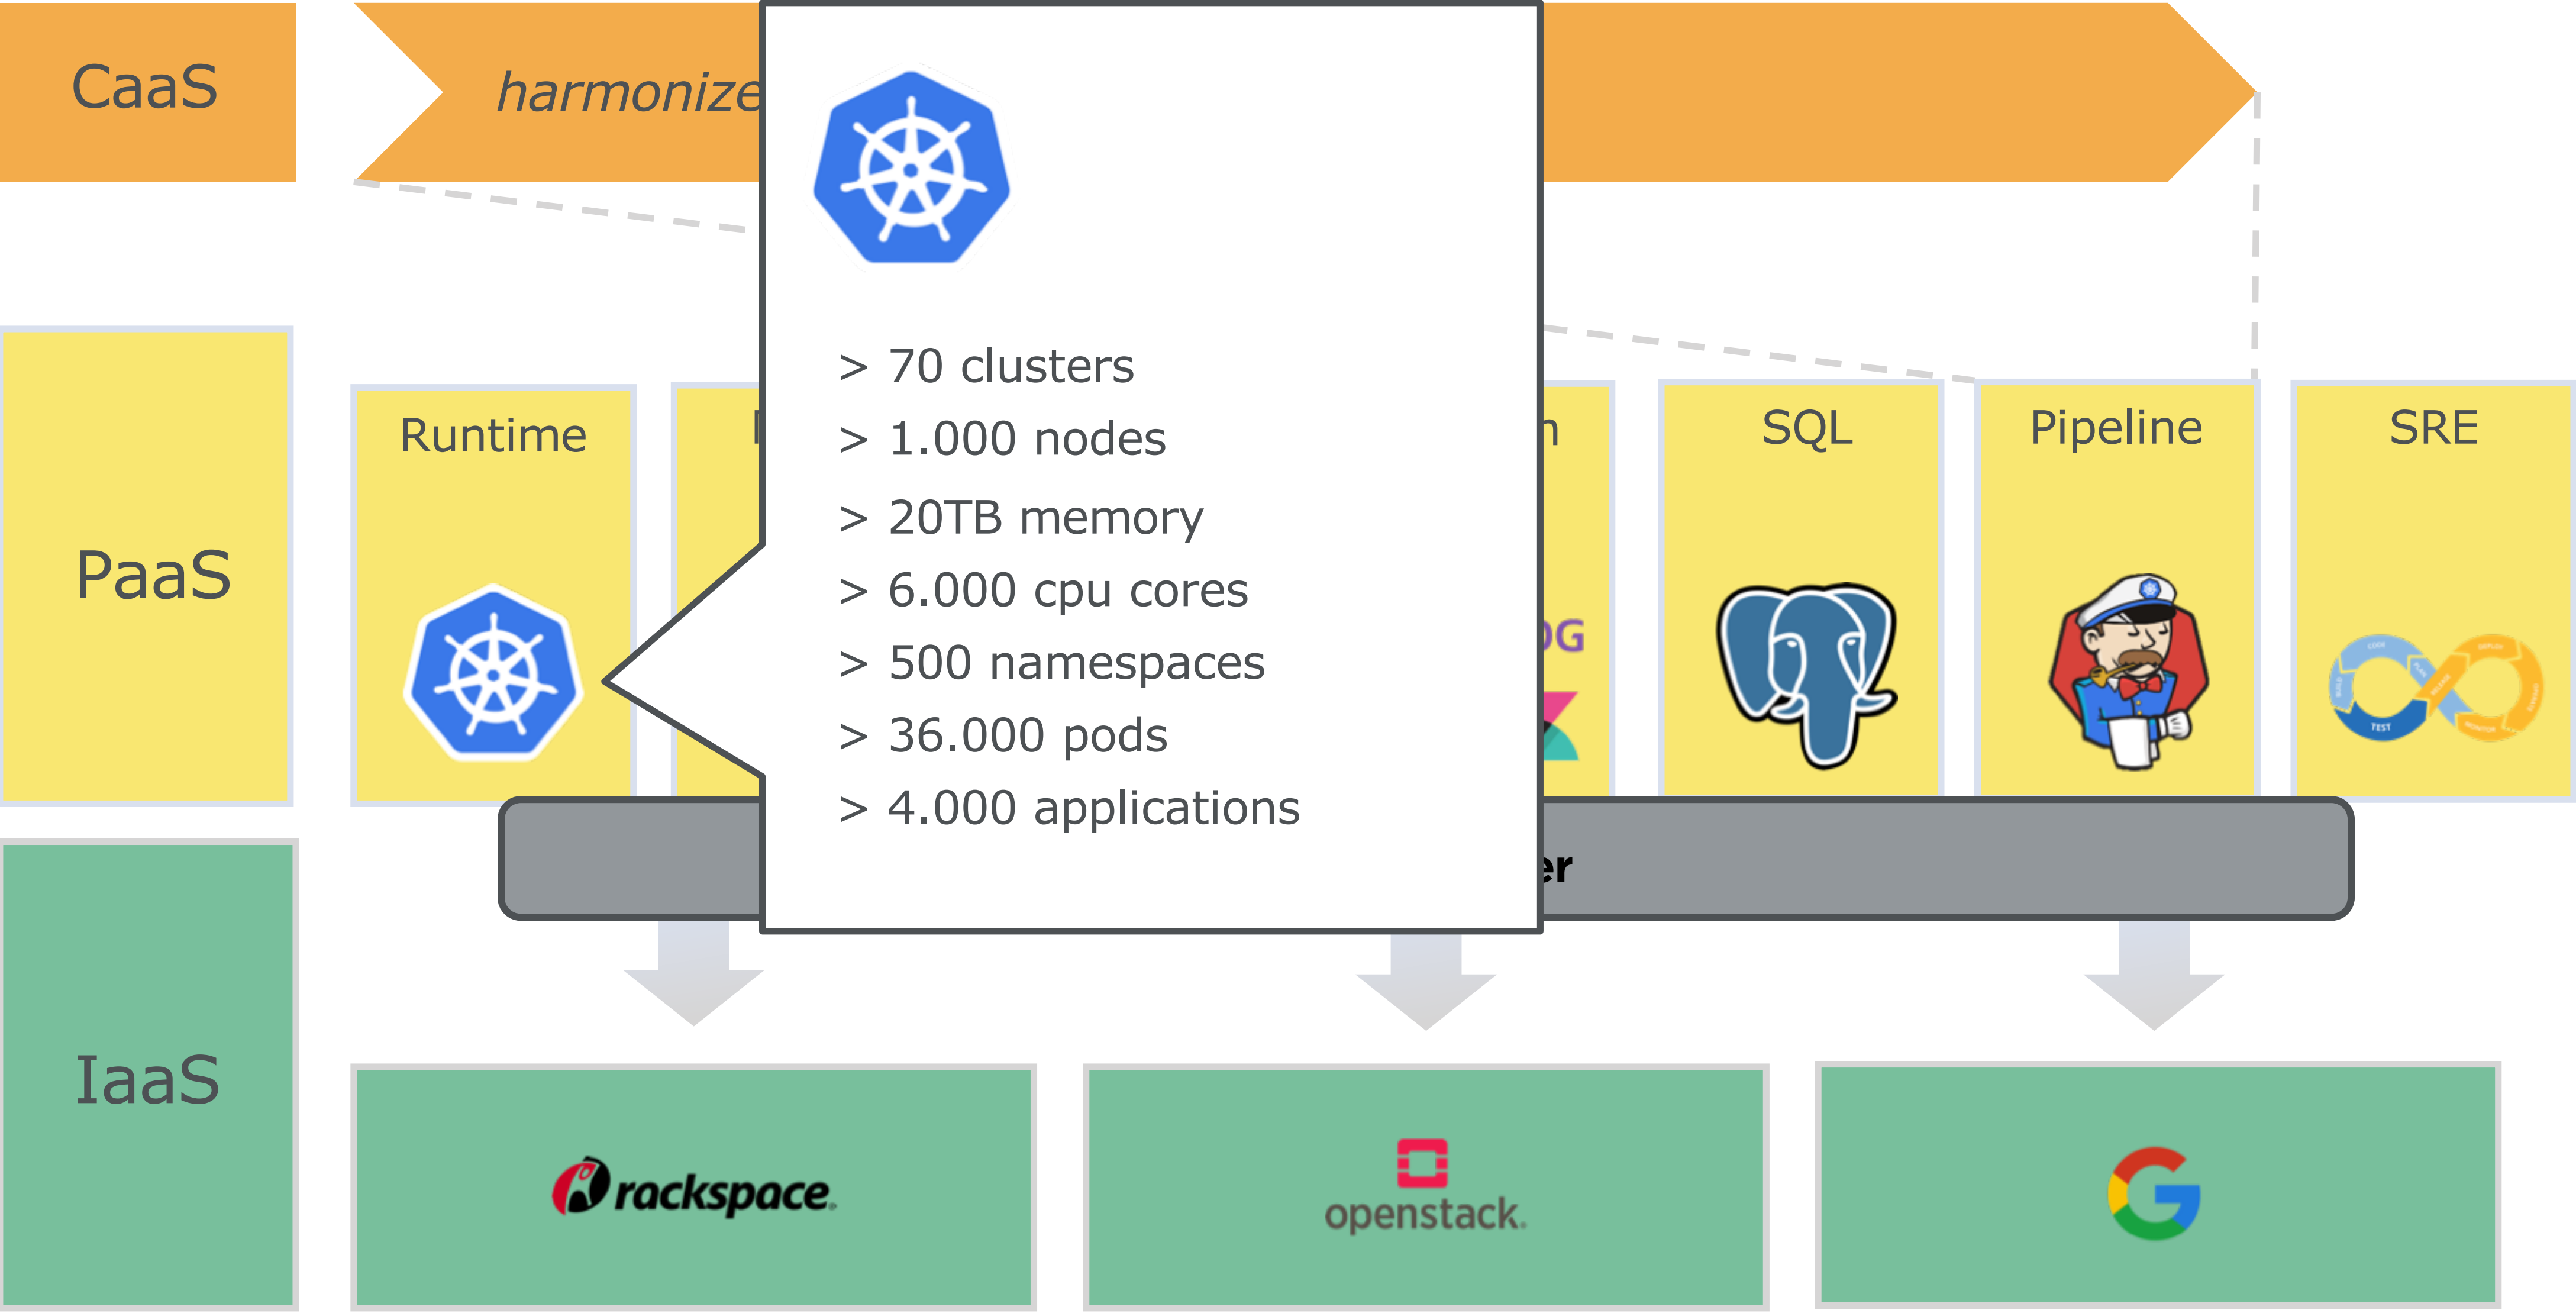

harmonized CI/CD pipelines

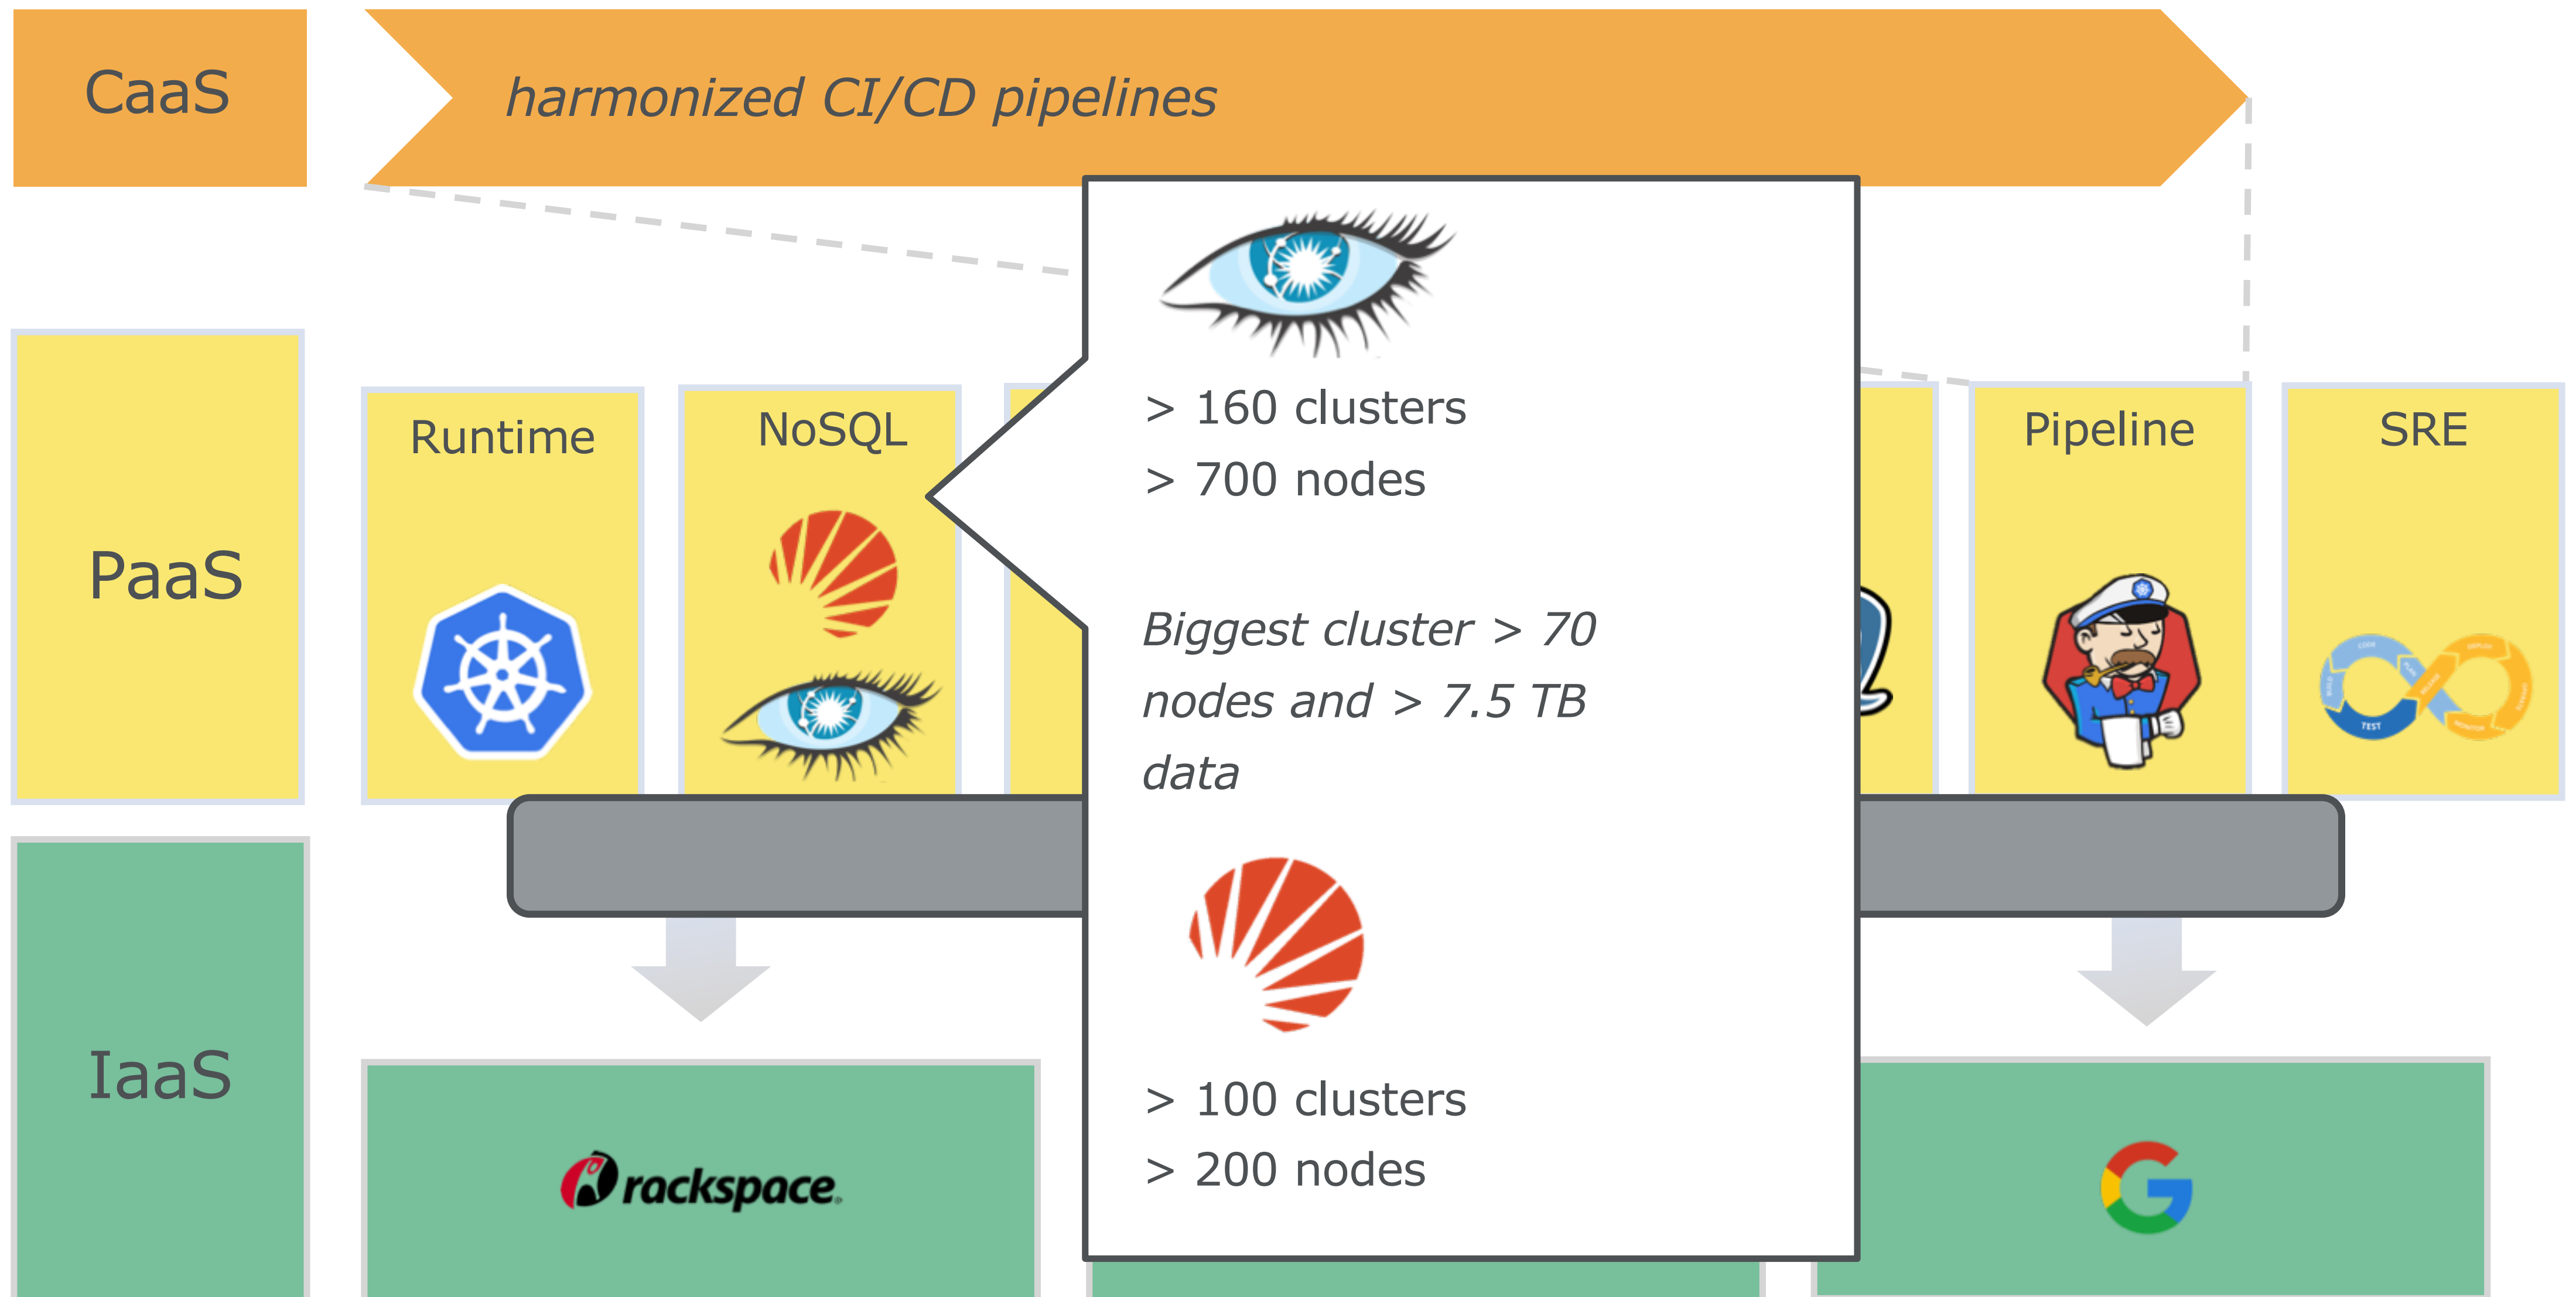

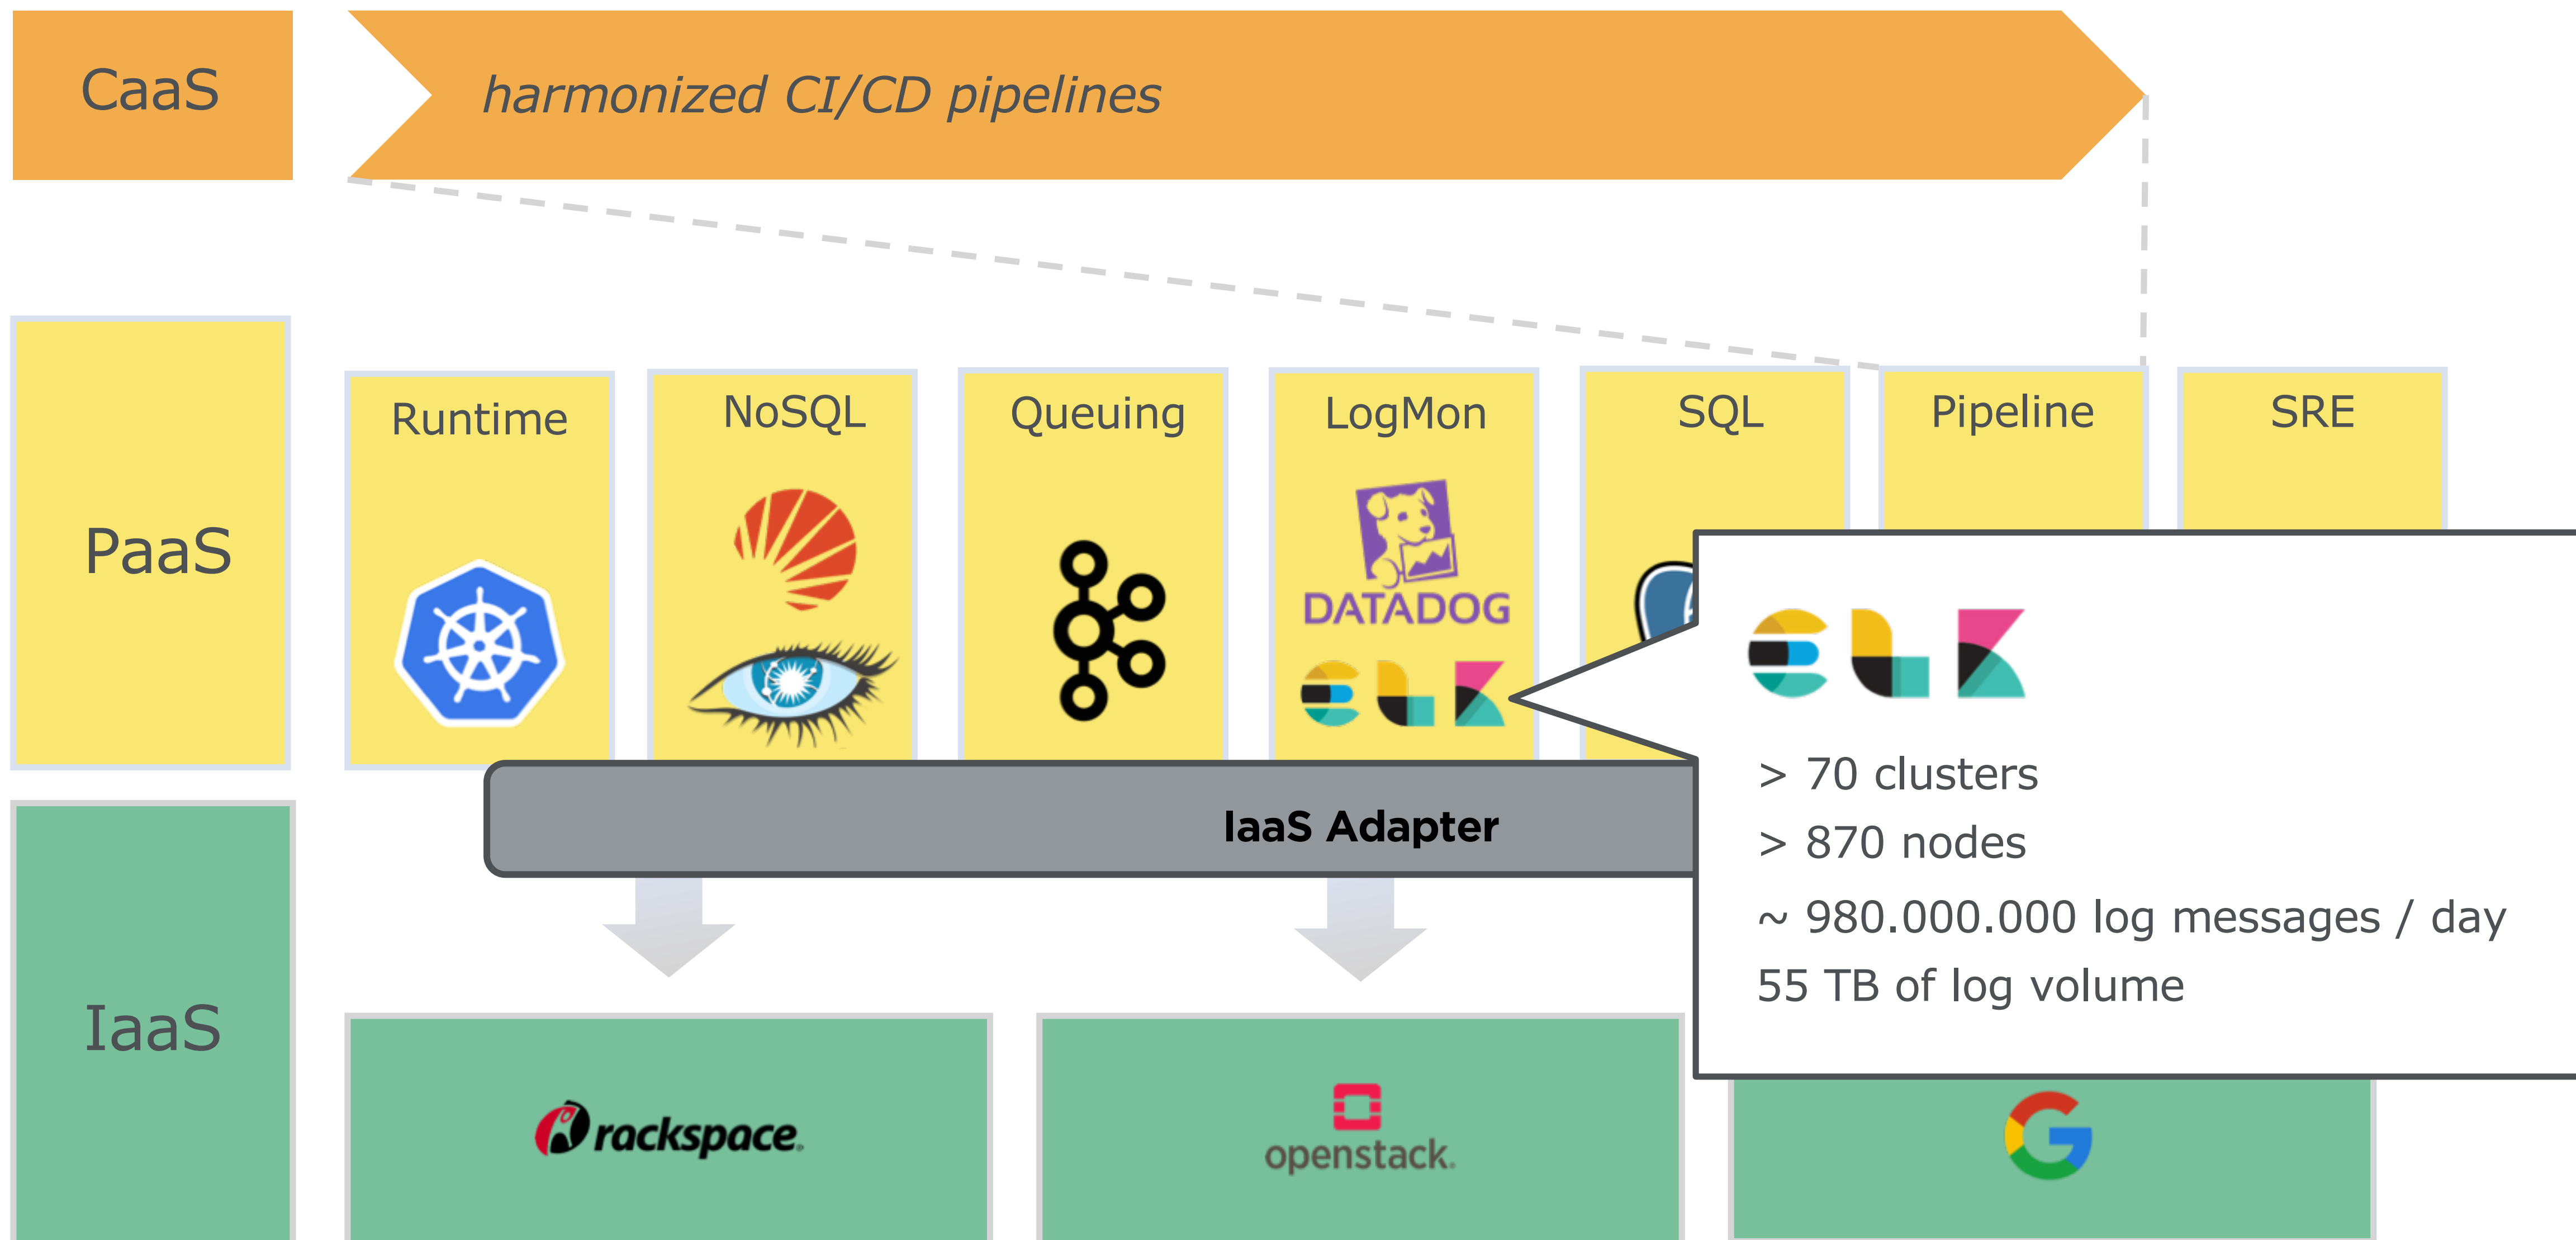

Status Quo

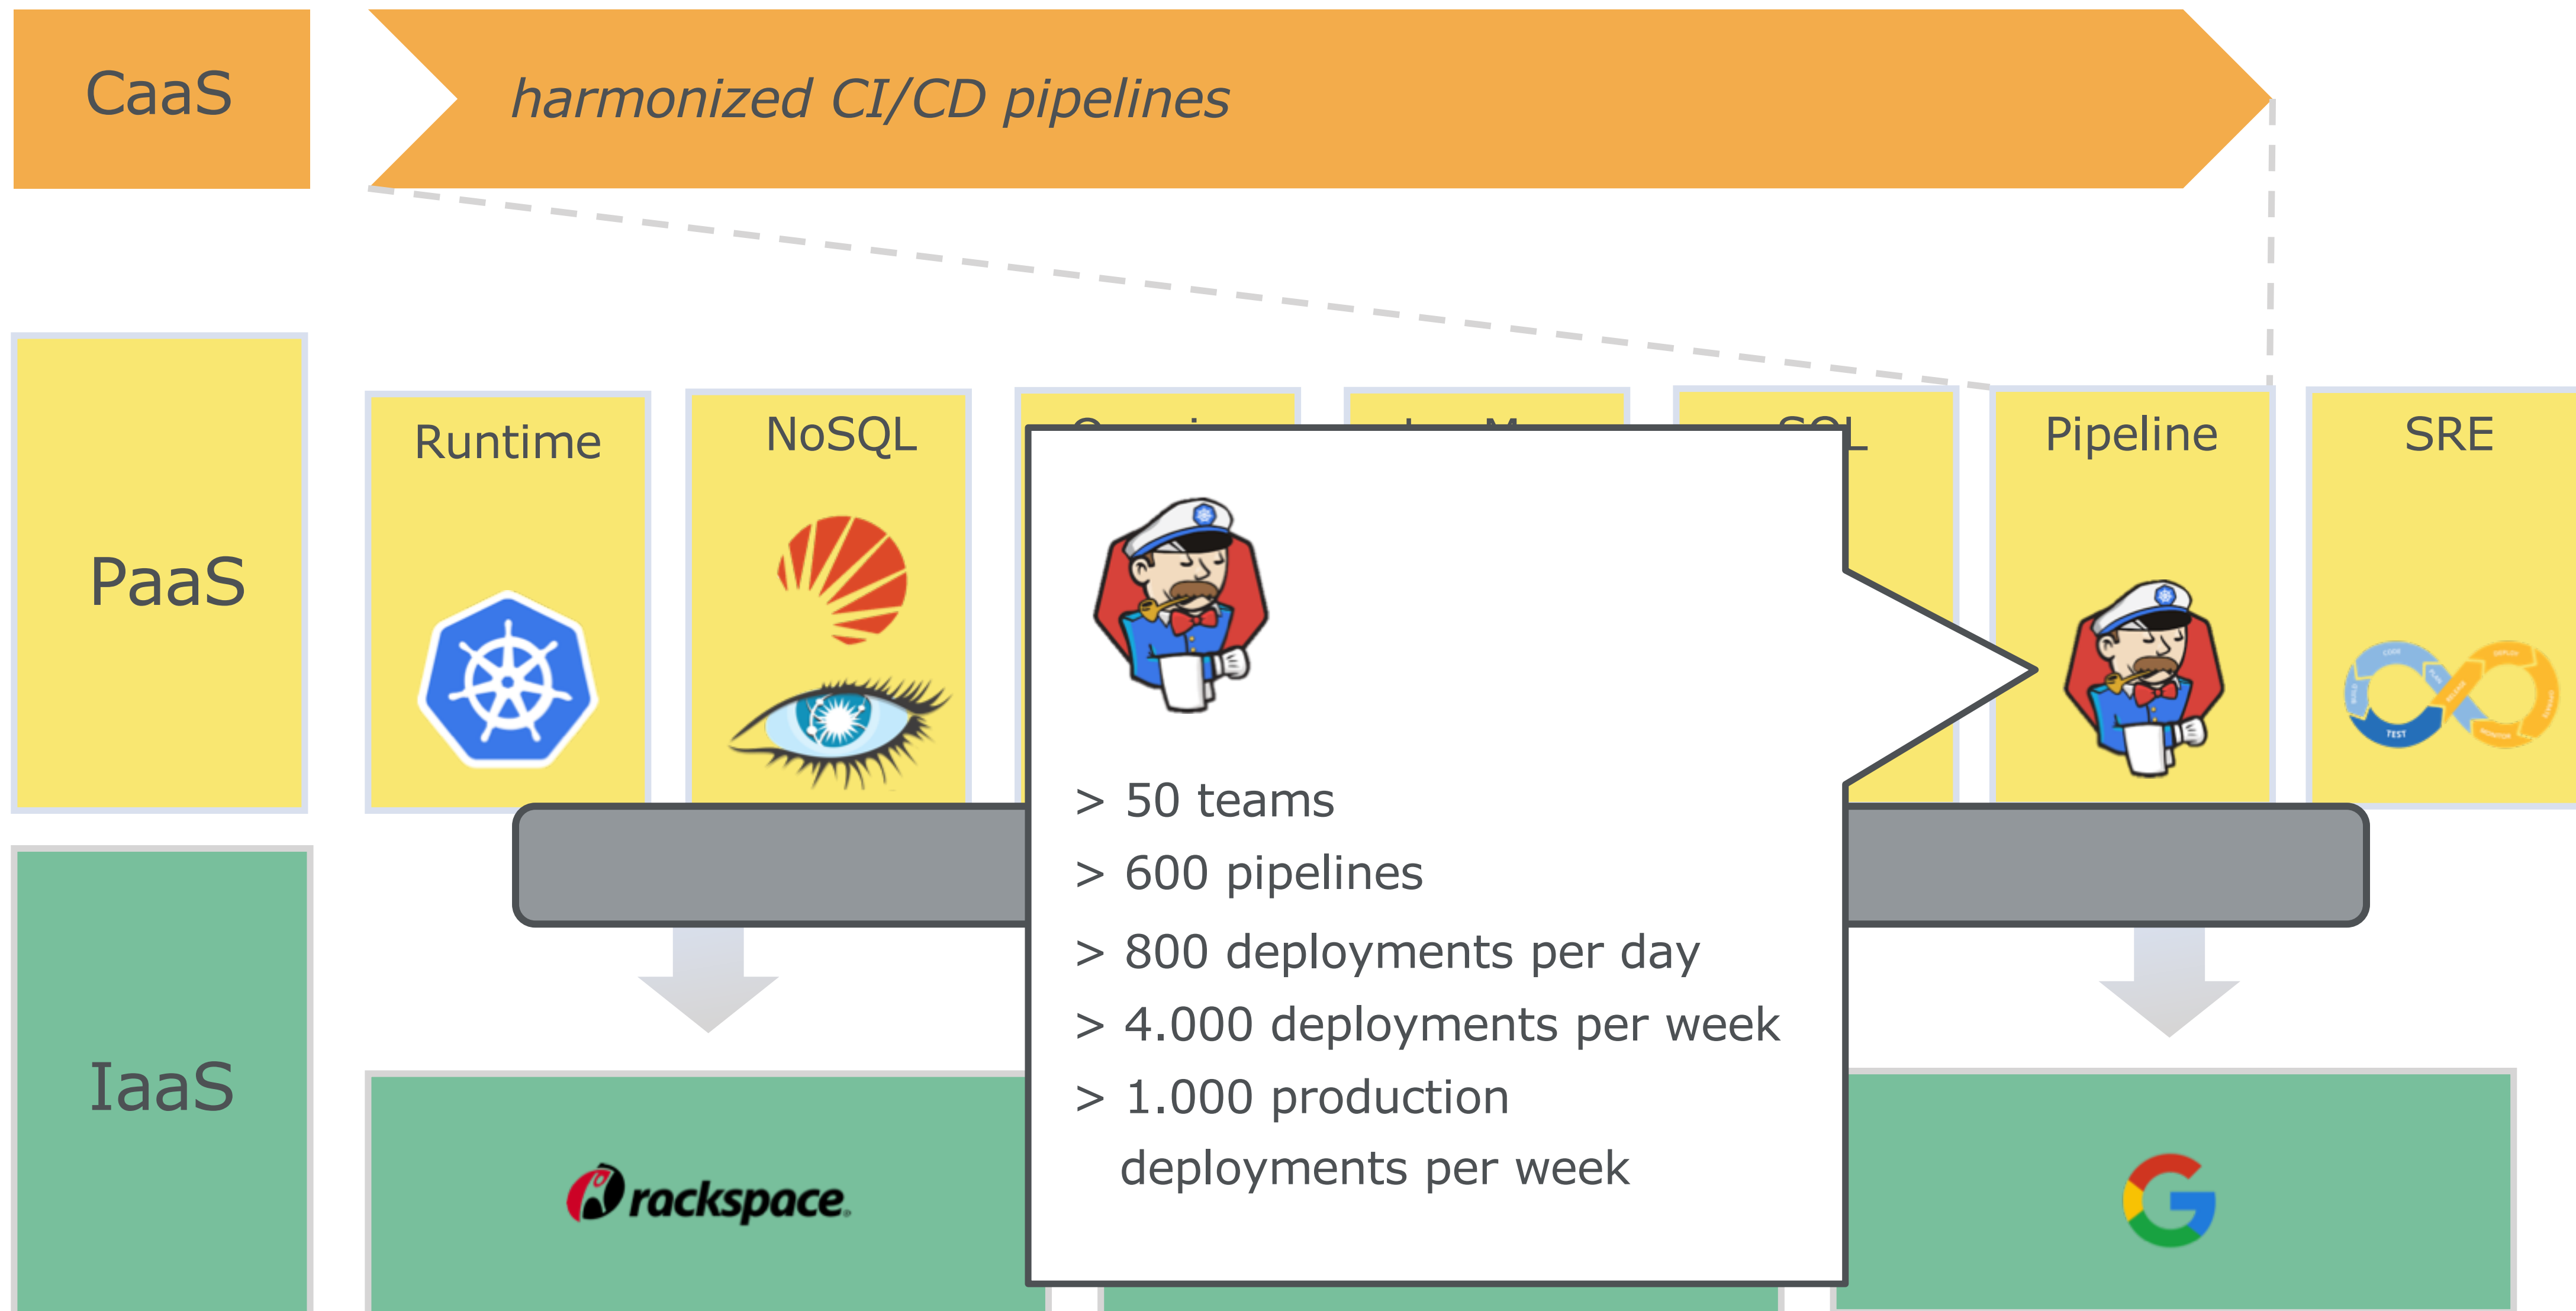

CaaS

harmonized CI/CD pipeline

PaaS

Runtime

NoSQL

Pipeline

SRE

IaaS

Development teams (verticals)

- > 75 teams
- > 800 developers
- Internal & external
- Multiple vendors
- Heterogenous maturity in cloud native application development

Platform teams

- 10 teams
- < 60 platform engineers

LESSONS LEARNED

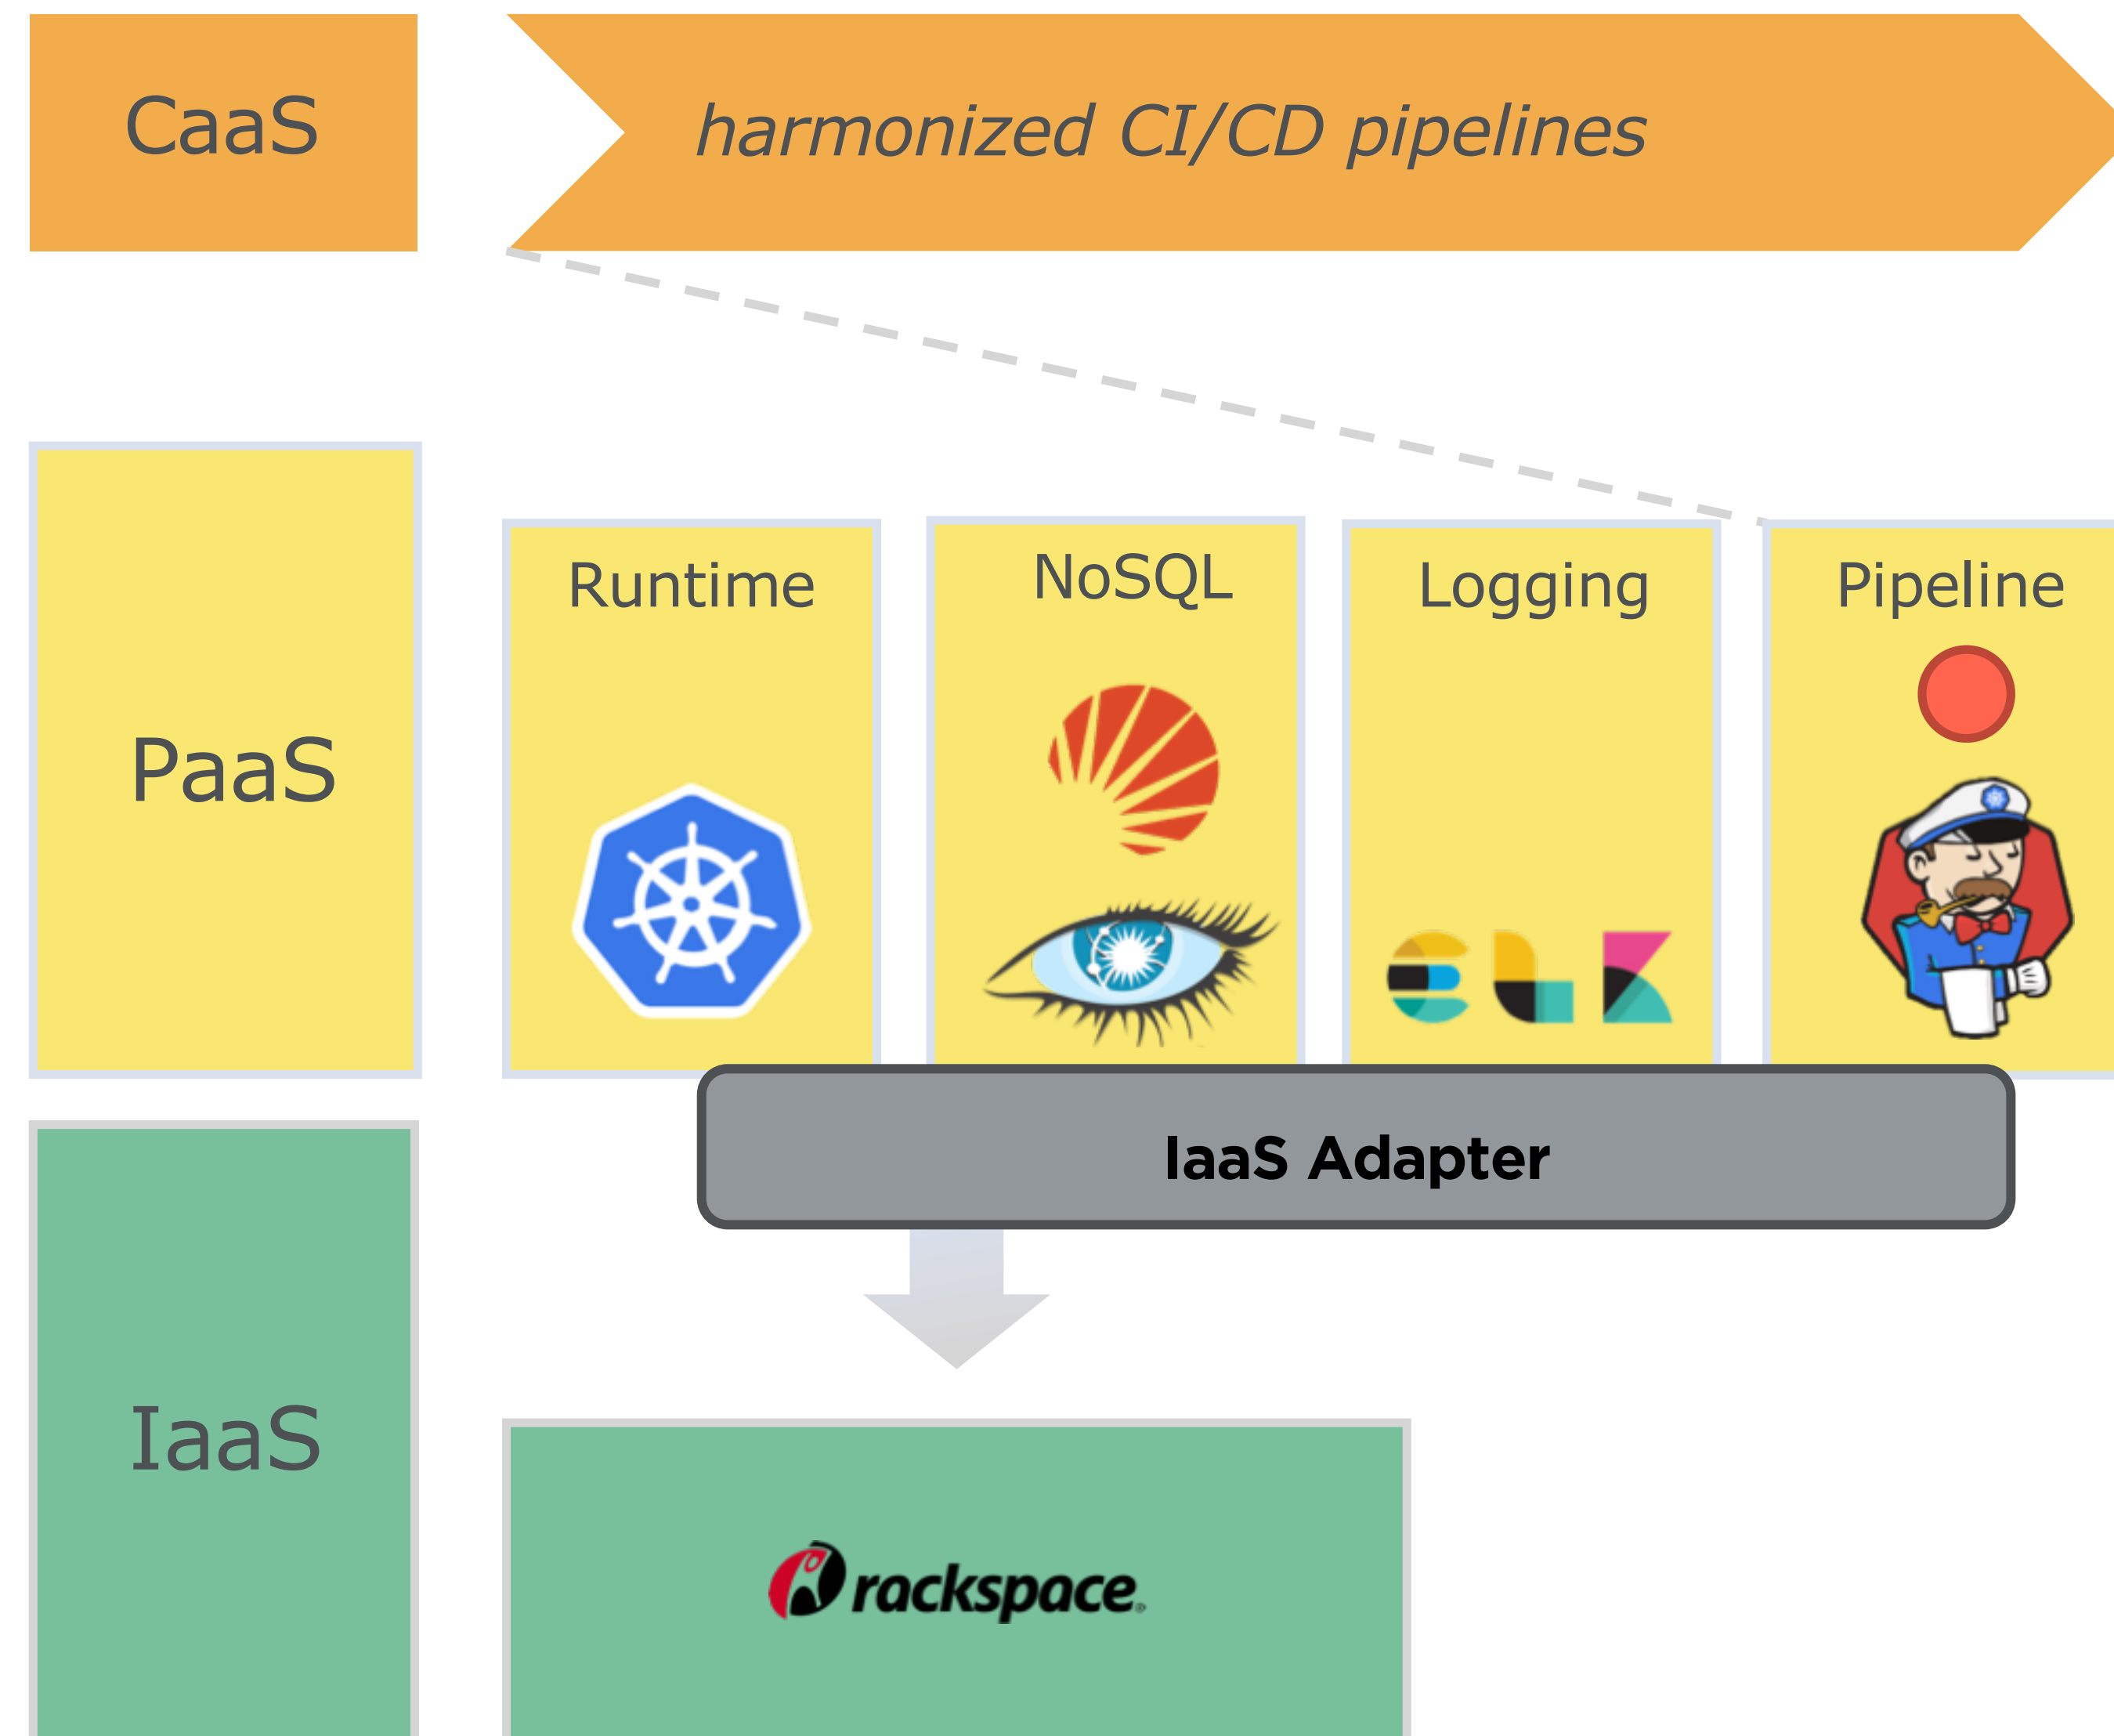

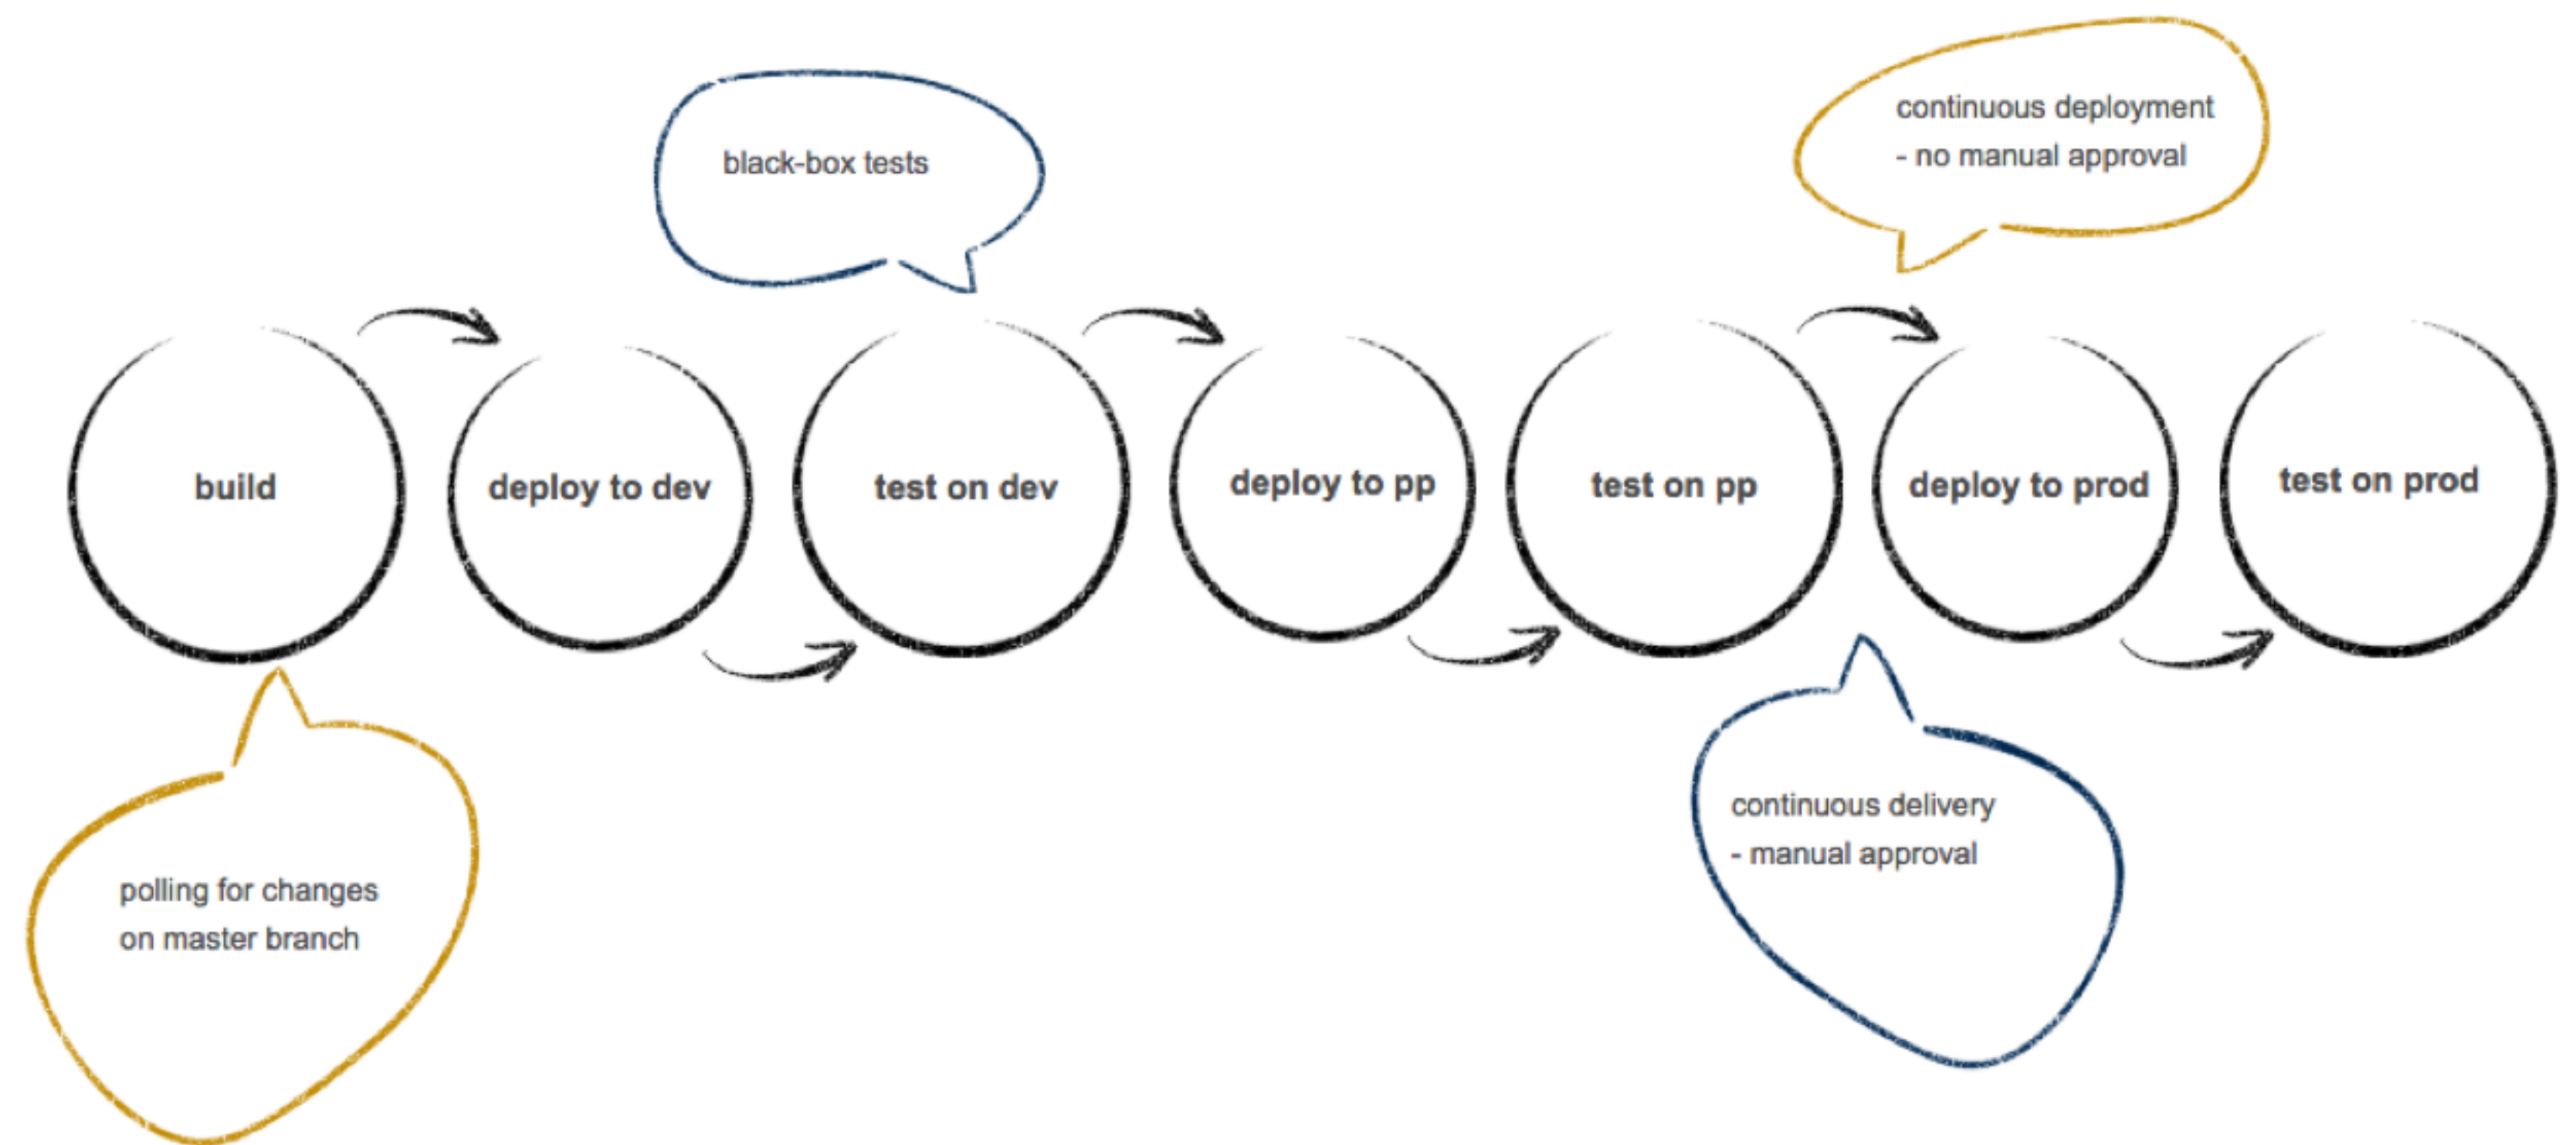

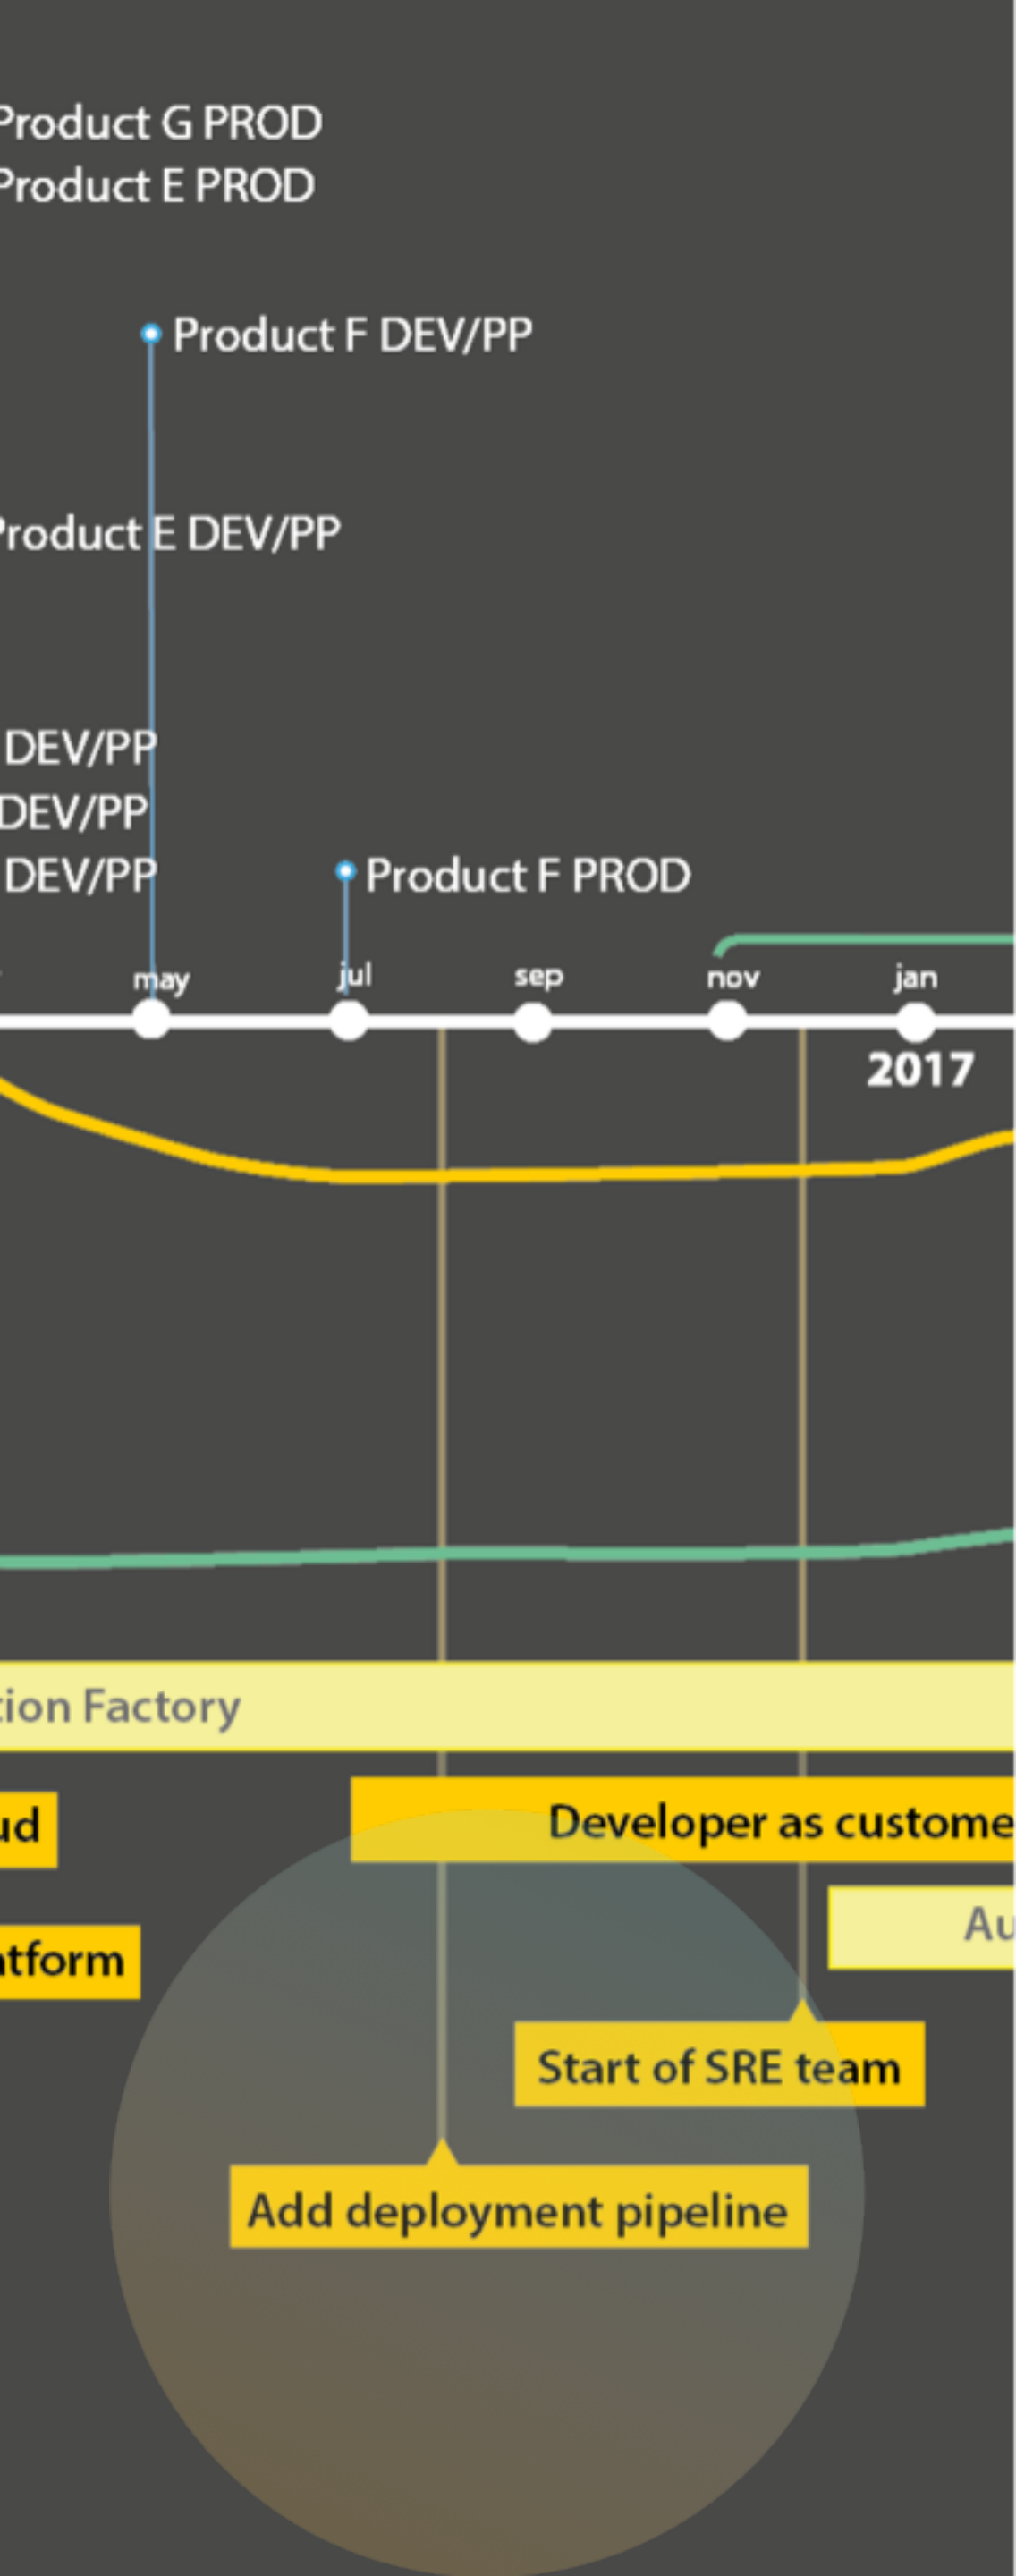

Pipeline as architecture police

**What would we do, if we were
outside of METRO?**

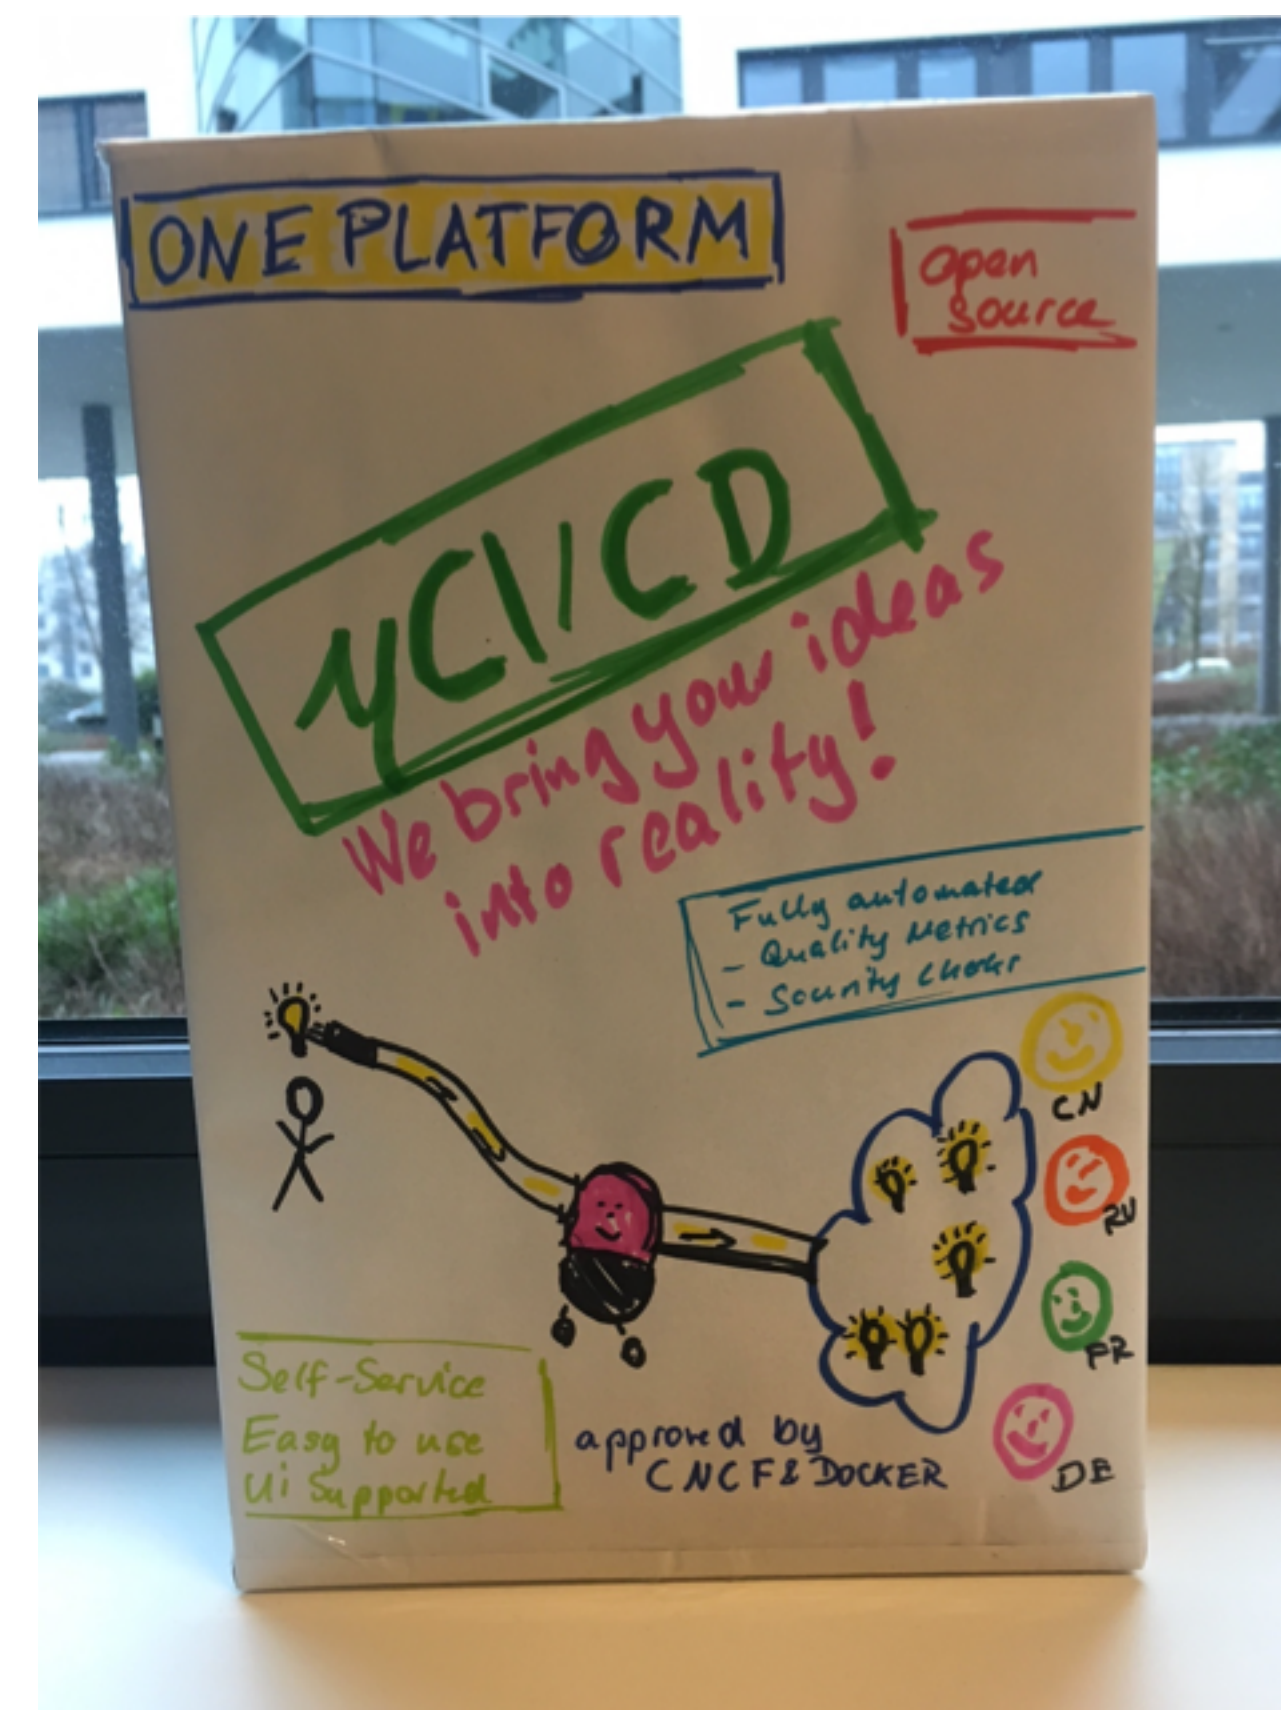

- Understand customer needs
 - Analyze competition
 - Marketing
- => Productize

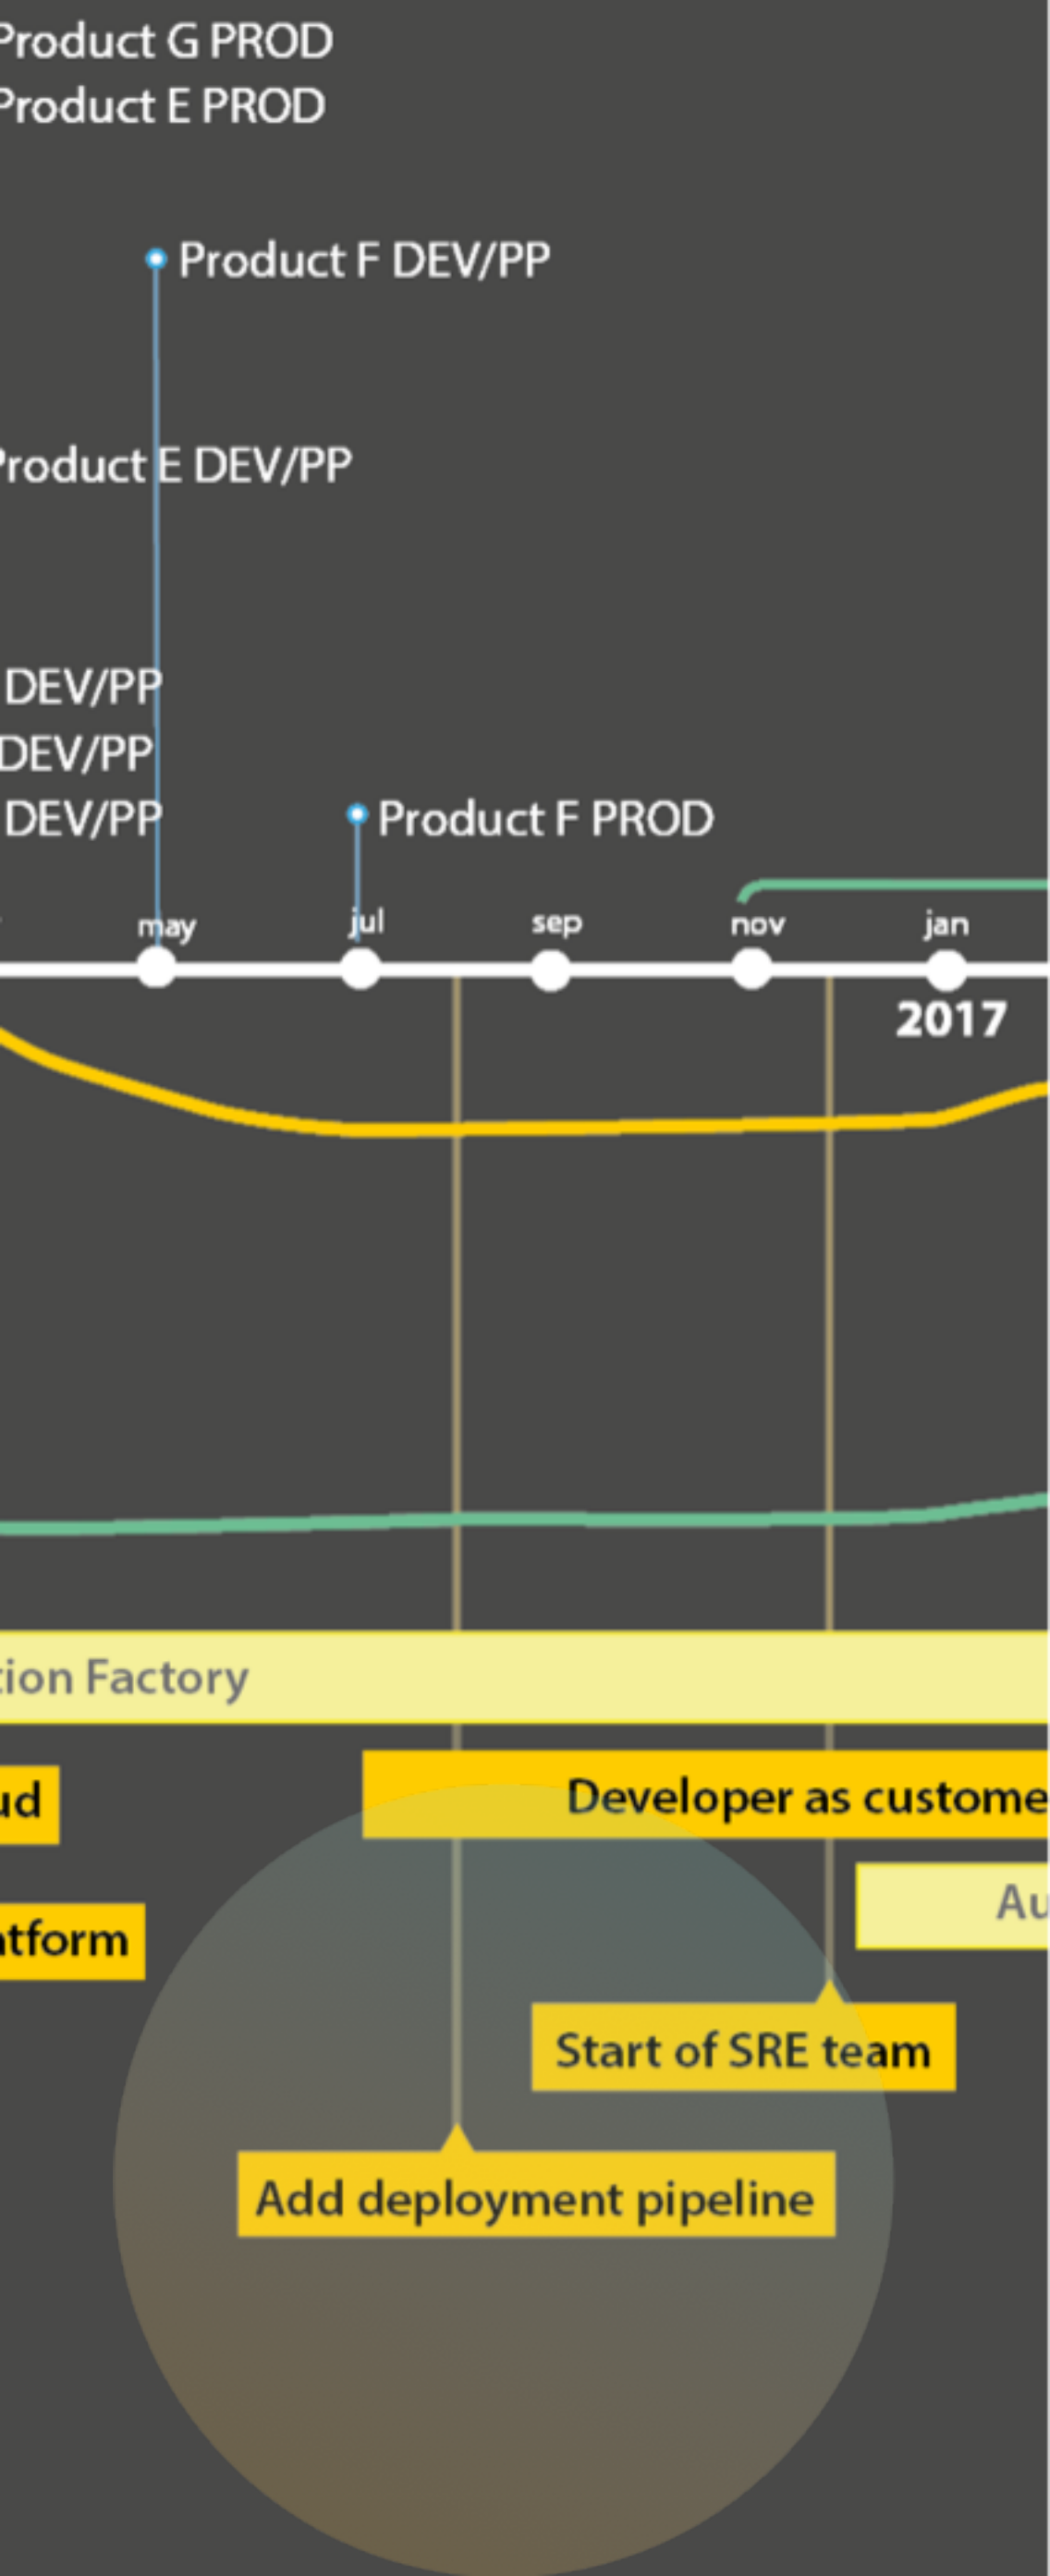

MAKE DEPLOYMENT GREAT AGAIN!

Make development teams' life easier by offering one-click pipeline setup that deploys an application in a cost-efficient, globally distributed, reliable, and secure way.

Reduce time-to-market for teams, allowing them to focus on business value.

Pipeline as architecture police

One-Platform Helm Charts

[Charts](#) • [Repositories](#) • [Deployments](#) • [About](#)

jenkins

1.0 - twotier

A jenkins helm chart with an opinionated default configuration from the 2tier team

The 2tier-Jenkins Helm Chart

Depends on stable/jenkins, but is preconfigured to work with Metro K8s Clusters.

Prerequisites

TBD

Installation

1. Create a ssh key pair and upload it into a Kubernetes secret

In order for your jenkins machine to be able to pull repositories from git, it needs to have a an ssh key. To generate a key and upload it to kubernetes run the following:

```
../onboarding/create-customer.sh
```

By default a jenkins `credentials.xml` will be created referencing the key at the mount point mentioned above. If you want to specify a differnet mount point, you need to overwrite the `credentials.xml` by specifying `jenkins.credentialsXml` . As a basis for overwriting the file, check out the default [values.yaml](#) of this chart.

2. Give access to the users of Vertical

Install

[One Click installation](#)[Helm CLI](#)[Install jenkins v0.4.3](#)

Chart Versions

0.4.3 - Jun 13, 2018

0.4.2 - Jun 12, 2018

0.4.1 - Jun 9, 2018
